 \end{array}
 \quad
 \begin{array}{ll}
 m \rightarrow L & w \rightarrow n \\
 b \rightarrow R & T \rightarrow v \\
 K \rightarrow C & \textcircled{1} \\
 \end{array}
 \quad
 \begin{array}{l}
 m = \frac{I_2}{T_1} = \frac{w_1}{w_2} \\
 \end{array}$$

Gabriel Barbosa Paganini - 10222539 - Modelagem aula 15/09

① a) Analogia do tipo 2

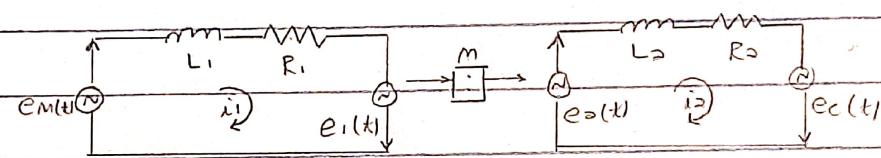

$$\begin{aligned}
 \text{Nó A: } [C_1 D + \frac{1}{R_1}] V_1 &= i_m - i_1 & \text{Nó B: } [C_2 D + \frac{1}{R_2}] V_2 &= i_2 - i_c
 \end{aligned}$$

$$\text{Transformador: } m = \frac{i_2}{i_1} \rightarrow i_2 = m \cdot i_1$$

$$\begin{array}{ll}
 \text{Sistema} & (J_1 D + B_1) w_1 = T_m - T_1 \\
 \text{mecânico} & (J_2 D + B_2) w_2 = T_2 - T_c \\
 T_2 = m T_1 & \Rightarrow \begin{cases} J_1 \ddot{\theta}_1 + B_1 \dot{\theta}_1 = T_m - T_1 \\ J_2 \ddot{\theta}_2 + B_2 \dot{\theta}_2 = T_2 - T_c \\ T_2 = m T_1 \quad | \quad \dot{\theta}_2 = m \dot{\theta}_1 \end{cases}
 \end{array}$$

b) Analogia do tipo 1

$$\text{Malla 1: } (L_1 D + R_1) i_1 = e_m - e_1 \quad | \quad \text{Malla 2: } (L_2 D + R_2) i_2 = e_2 - e_c$$

$$\text{Transformador: } m = e_2 / e_1 \rightarrow e_2 = m \cdot e_1$$

$$\begin{array}{ll}
 \text{Sistema} & (J_1 D + B_1) w_1 = T_m - T_1 \\
 \text{mecânico} & (J_2 D + B_2) w_2 = T_2 - T_c \\
 T_2 = m T_1 & \Rightarrow \begin{cases} J_1 \ddot{\theta}_1 + B_1 \dot{\theta}_1 = T_m - T_1 \\ J_2 \ddot{\theta}_2 + B_2 \dot{\theta}_2 = T_2 - T_c \\ T_2 = m T_1 \quad | \quad \dot{\theta}_2 = m \dot{\theta}_1 \end{cases}
 \end{array}$$

② Eq. dif. da caixa de transmissão em w_2 : → Utilizando as eqs do ex 1

$$J_1 \ddot{\theta}_1 + B_1 \dot{\theta}_1 = T_m - T_1 \rightarrow T_1 = T_m - J_1 \ddot{\theta}_1 - B_1 \dot{\theta}_1$$

$$J_2 \ddot{\theta}_2 + B_2 \dot{\theta}_2 = T_2 - T_c \quad T_2 = m T_1 \rightarrow m T_1 = J_2 \ddot{\theta}_2 + B_2 \dot{\theta}_2 + T_c$$

$$\therefore m (T_m - J_1 \ddot{\theta}_1 - B_1 \dot{\theta}_1) = J_2 \ddot{\theta}_2 + B_2 \dot{\theta}_2 + T_c ; \text{ com } \begin{cases} \dot{\theta}_1 = m \dot{\theta}_2 \\ \ddot{\theta}_1 = m^2 \ddot{\theta}_2 \end{cases}$$

$$m T_m - J_1 m \ddot{\theta}_2 - B_1 m^2 \dot{\theta}_2 = J_2 \ddot{\theta}_2 + B_2 \dot{\theta}_2 + T_c \quad \left\{ \begin{array}{l} J_{eq} = J_2 + J_1 m^2 \\ B_{eq} = B_2 + B_1 m^2 \end{array} \right.$$

$$\rightarrow (J_2 + J_1 m^2) \ddot{\theta}_2 + (B_2 + B_1 m^2) \dot{\theta}_2 + T_c = m \cdot T_m ; \text{ com }$$

$$\boxed{\therefore J_{eq} \ddot{\theta}_2 + B_{eq} \dot{\theta}_2 + T_c = m \cdot T_m}$$
