Leveraging nation branding opportunities through sport mega-events

Brendon Knott, Alan Fyall and Ian Jones

Brendon Knott is Senior Lecturer at Sport Management Department, Cape Peninsula University of Technology, Cape Town, South Africa. Alan Fyall is Orange County Endowed Professor of Tourism Marketing Graduate Program Coordinator at Rosen College of Hospitality Management, University of Central Florida, Orlando, Florida, USA.

Ian Jones is based at Department of Sport and Physical Activity, Bournemouth University, Bournemouth, UK.

Abstract

Purpose – This paper aims to indicate a shift in focus from legacy to the leveraging of event impacts, and previous papers have indicated a growing awareness of the brand-related legacies associated with sport mega-events for a host nation. However, none have explored this in relation to the strategic activities of nation brand stakeholders.

Design/methodology/approach – The case of South Africa and the 2010 FIFA World Cup was selected, as this host nation clearly stated its aim of using the sport mega-event to develop its brand. A qualitative study explored the insights of selected, definitive nation brand stakeholders and experts, elicited using in-depth, semi-structured interviews ($n = 27$) that took place two to three years post the event.

Findings – A thematic analysis clustered the leveraging imperatives into seven key strategic focus areas, namely, the media, local citizens, stakeholder partnerships, the tourism experience, design, sustainable development and urban transformation and event hosting.

Research limitations/implications – This paper is not an audit of leveraging activities nor does it assess the costs of leveraging. The focus on a specific case has allowed for an in-depth analysis, although, for greater transferability of these findings, it is recommended that further comparative studies be conducted, especially in emerging nation contexts.

Practical implications – The paper identifies key strategic focus areas as well as examples of practical activities for leveraging mega-events to gain and sustain nation brand benefits. In particular, stakeholders are urged to plan and budget for leveraging before, during and especially post an event.

Social implications – In light of the critique of mega-events linked to their social impacts and costs, this paper recommends leveraging focus areas, and especially the mobilisation of citizen support, that can assist the realisation of positive social outcomes.

Originality/value – The paper adds to the emerging discourse of nation branding, highlighting opportunities derived through sport mega-events and assisting brand stakeholders to leverage such opportunities more effectively.

Paper type Research paper

1. Introduction

South Africa has faced branding challenges similar to most developing nations, given the unfamiliarity of its brand and also having potentially incorrect, out-dated or stereotyped associations. Furthermore, the “Brand Africa”/continent brand effect often results in African nations being associated with the same attributes across the continent, such as crime, civil war, famine, disease and corruption (Anholt, 2007). In addition, heightened media attention on the nation in the lead up to the 2010 mega-event focused on many negative aspects such as inflation, crime and xenophobic riots (Tomlinson *et al.*, 2009). As the largest sport event to be hosted on the African continent, the 2010 FIFA World Cup was perceived as an opportunity to dispel common stereotypes about Africa and dispel Afro-pessimism (Donaldson and Ferreira, 2009; Tomlinson *et al.*, 2009). The local organising committee clearly stated the nation’s intention to use the sport mega-event to transform these

perceptions of the nation and thus develop its nation brand, as is evident in the following quotation by the CEO of the Organising Committee:

[The World Cup] is about nation-building, it's about infrastructure improvement, it's about country branding, it's about repositioning, it's about improving the image of our country, and it's about tourism promotion, (Jordaan, as cited in [Allmers and Maennig, 2009](#), p. 500).

While a previous paper ([Knott et al., 2015](#)) described the nation branding opportunities created by the 2010 sport mega-event for the host nation, this paper explores the manner in which these opportunities can be leveraged by nation brand stakeholders.

2. Literature review

2.1 Nation branding and sport mega-events

[Fan \(2010\)](#) defines nation branding as:

[. . .] a process by which a nation's images can be created, monitored, evaluated and proactively managed in order to improve or enhance the country's reputation among a target international audience (p. 101).

This definition stresses the process and actions of brand stakeholders and stresses the central activity of nation image management. It notes that nation brands are constructed and managed by stakeholders and do not simply come into existence on their own, and furthermore, that there is a strategic intentionality to the process, namely, that it is expected to result in positive reputation.

The leadership and control of a nation brand is a particular challenge. According to [Hankinson \(2010\)](#), a nation brand is not owned or controlled by a single organisation, but rather jointly developed and delivered by a network of public and private sector organisations. [Morgan et al. \(2010, p. 3\)](#) note a criticism of place branding being that "there are too many stakeholders and too little management control". [Dinne \(2011, p. 70\)](#) referred to the legitimacy of who manages a nation brand as an "ethical challenge". More broadly, [Fan \(2010, p. 98\)](#) asserts that nation branding is concerned with "a country's whole image on the international stage, covering political, economic and cultural dimensions". This is similar to an early definition of nation branding by [Anholt \(2003, p. 11\)](#), who likened it to a "strategic vision", defining the activity of nation branding as:

[. . .] determining the most realistic, most competitive and most compelling strategic vision for the country, and ensuring that this vision is supported, reinforced and enriched by every act of communication between the country and the rest of the world.

The final aspect of this definition hints at the potential for nation branding that hosting a sport mega-event may hold for a nation as an "act of communication" with the world. Sport can be a powerful agent in the imaging, re-imaging and branding of places, especially through the hosting of sport mega-events ([Getz, 2003; Higham and Hinch, 2009](#)). While mega-events can include a variety of different types of events, there has been a growing awareness of the potentially significant impact that hosting sport mega-events, such as the Olympic Games and FIFA World Cup, can have on a country's brand image ([Gibson et al., 2008](#)). Sport mega-events have become increasingly important in the contemporary era, with their hosting becoming an object of policy for an increasing number of nation states in the world, most notably "as a means to gain international visibility in some ways" ([Cornelissen, 2007, p. 242](#)). Sport mega-events represent a means of achieving international prominence and national prestige ([Essex and Chalkley, 1998](#)) or, as [Berkowitz et al. \(2007, p. 164\)](#) put it, "a great branding opportunity" for nations.

Such events may provide an opportunity to create or promote an image and also re-brand a nation ([Anholt, 2007; Florek and Insch, 2011](#)). For example, the Olympic Games have long been used to serve the imaging or re-imaging of places ([Higham and Hinch, 2009](#)). [Florek and Insch \(2011\)](#) cite the case of Sydney and the Olympic Games of 2000 that accelerated the awareness of Australia as a destination by up to 10 years while they also

cite the case of Germany's image being "softened and boosted" through the hosting of the 2006 FIFA World Cup. [Heslop et al. \(2013, p. 13\)](#) noted how increasingly emerging nations recognise are bidding for and hosting sport mega-events as "a fast-track to world recognition and reputation enhancement". The high media profile of mega-events has especially been emphasised as a means to increase the awareness, prominence and standing of places, as well as serve as an agent of change in terms of imagery and place meaning ([Chalip and Costa, 2005](#); [Florek and Insch, 2011](#); [Higham and Hinch, 2009](#)).

However, mega-events have not been without criticism. A number of authors have noted negative impacts for host cities such as, heavy social costs (including resident evictions and a heavy price paid by low-income groups) linked to Vancouver Expo 1986 ([Shapcott, 1998](#)); traffic congestion, parking and potential increases in cost of living concerns related to London 2012 ([Ritchie et al., 2010](#)); pollution, price increases and impact on natural resources linked to the 2002 FIFA World Cup in Korea ([Kim et al., 2006](#)); negative tourism impact on neighbouring states due to displacement, linked to the 2000 Sydney Olympics ([Madden, 2006](#)); lack of usage or sustainability of facilities post an event, linked to 2002 FIFA World Cup in Korea ([Kim and Petrick, 2005](#)); and negative housing and social impacts, focusing on economic benefits at the expense of social, environmental and political imperatives, associated with the 2002 FIFA World Cup in Korea ([Hall and Hodges, 1996](#)). As a result, leveraging of events has become an important consideration in the contemporary era.

2.2 From mega-event impacts to "leveraging"

[Weed and Bull \(2009\)](#) suggest that the event impacts framework may be outmoded and, supported by a number of other authors ([Chalip, 2004](#); [Dickinson and Shipway, 2007](#); [Jago et al., 2010](#)), indicate that a new focus with an emphasis on leveraging may be more applicable. According to [Weed's \(2009, p. 621\)](#) meta-review of sport tourism research, "the nascent literature around the strategic 'leveraging' of sports mega-events for specific purposes represents a welcome 'shift' from a dominant focus on measuring *post-hoc* impact assessments". Leverage rather broadly refers to "those activities [. . .] which seek to maximise the long-term benefits from events" and "the processes through which the benefits of investments are maximized" ([Chalip, 2004, p. 228](#)). The focus on leveraging represents a shift to a more forward-thinking, proactive, strategic approach, acknowledging the vital role of stakeholders in the process. [Smith \(2014, p. 15\)](#) reconceived mega-events as "windows of opportunity within which to undertake initiatives", describing leveraging as:

[. . .] an approach which views mega-events as a resource which can be levered to achieve outcomes which would not have happened automatically by staging an event (p. 16).

The focus on leveraging therefore represents a shift to a more forward-thinking, proactive, strategic and tactical approach where the objective is "to identify strategies and tactics that can be implemented prior to and during an event in order to generate particular outcomes" ([Chalip, 2004, p. 228](#)).

To date, however, few studies have captured the experiences, observations and lessons learned by event and brand stakeholders. [Weed \(2010\)](#) noted that knowledge relating to the perceptions of various stakeholders in sport and tourism, be they participants, policymakers, providers, host communities or the media, is limited. [Grix \(2012\)](#) produced a rare study that used [Chalip's \(2004\)](#) conceptualisation of "leverage" to investigate the strategies used to leverage nation brand image legacies of the 2006 German FIFA World Cup. Grix explained that a key for Germany was that it planned meticulously in the lead up to the event, devising a number of campaigns targeted at different groups and including a wide array of partners from business, government, civil society, culture and sport. This study therefore aimed to address the question:

Q1. How can stakeholders leverage and sustain a nation branding legacy from a sport mega-event for a host nation?

3. Methodology

The literature review noted a change in focus from event impact studies to a greater awareness of stakeholder activities involved in leveraging these impacts. An assessment of event leveraging can relate to short-term or immediate activities by event hosts or long-term activities, both before and after the event has taken place (Chalip, 2004). This study adopted a qualitative approach to ascertain key stakeholder experiences, perceptions and lessons learned relating to nation branding leveraging.

First, a definitive set of stakeholders was selected, using the list of stakeholder types found in the literature. Further to this list, in the case of a sport mega-event, sport organisations, government agencies, event owners/organisers, the media and host nation citizens can be added (Weed and Bull, 2009; Weed, 2010). The framework of power, urgency and legitimacy by Mitchell *et al.* (1997) was applied to these lists, clustering stakeholders according to their degree of power or influence in brand development, the degree of legitimacy or recognised authority or brand leadership that the stakeholder exhibits and the extent to which the stakeholders had a measure of urgency or vested interest in the specific organisation and success of the FIFA event. The framework describes stakeholders that have high levels of each of these aspects as definitive stakeholders. Key informants were therefore purposively chosen to represent definitive stakeholders. For this study, the media and citizens were excluded from the potential respondents, as this study focuses rather on the strategic and tactical approach of leveraging.

Key informants were therefore purposively chosen to represent definitive stakeholders. Furthermore, the researcher was a member of the “2010 Technical Update Committee” of the Provincial Government of the Western Cape (representing the regional academic sector and event-related research). This committee was formed in 2008 as a platform for communication and information dissemination between the major host city and provincial event and brand stakeholders within the Western Cape provincial region. The researcher used this database of stakeholders as a starting point for contacting representatives of the definitive stakeholder sectors identified. Five stakeholders were selected from this committee, namely, Provincial Government of the Western Cape; the city of Cape Town; Cape Town Tourism (local destination promotion agency); Accelerate Cape Town (local business and investment marketing organisation); and the Cape Higher Education Consortium that represented the local universities and event-related research co-ordination. These committee members assisted the researcher to source additional representatives at a national level and counterparts in other host cities across the country. Similar counterparts to these organisations were then included for the host cities of Johannesburg and Pretoria, Durban and a smaller host city of Nelspruit (“Mbombela”). Representatives at a national level were included, namely, the official “brand custodians” of the nation brand, “Brand South Africa”; and the national government departments of sport and tourism. Three additional tourism-specific stakeholders were included to represent the destination brand stakeholders, namely, the South African National Parks (SAN Parks) board that represents the game parks in the host nation; and the South African Tourism Services Association (a general representative of tourism services in the nation). A regional tourism destination marketing organisation was added to reflect the experiences of neighbouring nations. The research consultancy company employed by Tourism South Africa was included, as their predictions and assessments pre and post the event were widely publicised and acknowledged. While all of the above have a recognised power, urgency and legitimacy in relation to the nation brand and its related destination brands, two groups of stakeholders were specifically linked with the organisation of the event and the brand and co-branding link between the event and the host nation brand. These were the national-level local organising committee (LOC) and the event sponsors. Coca-Cola

was selected as a sponsor to include, as they appeared to make additional efforts to link their brand with the event and national brand characteristics through their sponsorship leveraging activities.

To provide an informed external perspective of the 2010 event and its impact on the host nation brand, as well as additional examples and experiences from other sport mega-events, the researcher selected a small number of key international informants who were not specifically involved in the 2010 FIFA World Cup to be interviewed. These respondents were regarded as mega-event or nation branding experts due to their experience in other mega-event contexts (such as Manchester 2006 Commonwealth Games; London 2012 Olympic Games; and Glasgow 2014 Commonwealth Games) or as consultants to nations and cities bidding to host mega-events or regarded as leading academic researchers in this field of study. The selection of “definitive” stakeholder sectors was identified, and potential respondents were identified to represent each sector. Definitive nation brand stakeholder sectors in the context of the 2010 FIFA World Cup, South Africa, are as follows:

- event “owners”, responsible for the national event organisation (i.e. FIFA OC);
- regional government event management and strategic co-ordination;
- host city (local government) event management and strategic co-ordination;
- national government departments and agencies for tourism promotion, nation branding, and sport and recreation;
- international regional (Southern Africa) tourism destination promotion agency;
- tourism destination promotion agencies at regional (domestic) and host city levels;
- tourism destination and services providers within the host nation;
- business and investment promotion agencies at national and host city levels;
- top-tier event sponsors; and
- research co-ordination for sport event tourism and consultation (including academic researchers).

In total, 27 interviews were conducted with 19 brand and event stakeholders and an additional eight key informants/experts, during the period March 2012 to November 2013. It was felt that this period would allow the stakeholders to be more objective in their reflections and also to reflect on the post-event legacy and the degree to which the opportunities had been leveraged post the event. For each organisation selected, the researcher identified the most suitable candidate to be interviewed as the most senior member of the organisation or department that was directly involved in the 2010 event. The disclosure of respondent identities raises important ethical considerations for researchers. In this paper, it was decided to keep the identities and specific organisation of the respondents confidential, and the nature of the sector or organisation is only described where relevant to the discussion. Direct quotes reference a respondent number (e.g. R3) as a form of distinction only.

This sample size is regarded as large, especially for a mixed methods study, although still within an expected size range. For example, [Grix's \(2012\)](#) qualitative study already mentioned selected nine stakeholder respondents. In other broader place and destination branding stakeholder-related studies reviewed, up to 32 candidates ([Marzano and Scott, 2009](#)) were selected for in-depth interviews. Some authors recommend between 5 and 25 interviews ([Creswell, 2014](#)). Others assert that you need to interview “as many individuals as necessary to find out what you need to know” (termed the “saturation” point), with this said to occur even within the first 12 interviews ([Hanna and Rowley, 2013](#), p. 1794). The reason for more than 12 interviews conducted in this study was so that the different brand and event stakeholder groupings that had been identified would be represented.

Furthermore, it was also decided to add different viewpoints from stakeholders in smaller cities, neighbouring regions and sponsors, for example.

The experiences, lessons and insights from these subjects were elicited using in-depth, semi-structured interviews. The semi-structured interviews were guided by a set of questions related to topics identified through the literature. This interview protocol comprised open-ended questions (“How would you summarise the nation branding legacy that has been left by the event for the nation?”; “Do you believe that there were any nation-branding opportunities lost or not utilised fully related to the event?”; and “Do you believe that the nation-branding gains of 2010 are being leveraged post the event?”). The interviewer was able to probe or clarify issues raised and to explore particular areas of experience or expertise of the respondent. Face-to-face interviews were conducted with all except for three international interviews that were conducted by Skype. Due to the nature of the semi-structured interview, interview times varied per respondent, from 35 to 75 minutes in duration. The respondents were generally very responsive and supportive of the research process. Most indicated that it was useful to reflect on their experiences and pass on their observations and lessons learned, noting that there had not been many such opportunities to do so. This highlights the need to record the knowledge and experiences of mega-event stakeholders.

The interviews were digitally recorded and manually transcribed, verbatim. The transcriptions were then analysed and manually coded using the software programme Atlas.ti. An inductive or “bottom-up” approach to the coding was followed, with codes being developed from key words as each response was reviewed. From the resultant long list of codes, clusters or categories were developed.

4. Findings

The respondents were generally very positive about the ability to leverage benefits of the sport mega-event on the nation brand. Respondents provided many examples of activities and initiatives that they or others undertook that influenced these positive outcomes and also compared activities with those of other mega-events they were aware of. The analysis clustered the types of leveraging activities and examples given by the respondents into broader themes, thus revealing seven key focus areas that describe general types of leveraging activities for stakeholders to maximise and sustain the nation branding legacy from a sport mega-event. Key focus areas for leveraging strategic nation branding opportunities through sport mega-events are as follows:

- *Media*. “Host” the media and embrace new media and communication forms.
- *Local citizens*. Mobilise the internal brand support.
- *Tourism experience*. Create brand experiences and engagement opportunities with event visitors.
- *Stakeholders*. Co-create brand value through stakeholder partnerships.
- *Design*. Leverage the opportunity to showcase or create iconic brand elements.
- *Sustainable development*. Leverage the event as a catalyst for sustainable development and transformation.
- *Event hosting*. Sustain the momentum of an operationally successful event through hosting future events.

4.1 *The media: host the media and embrace new media/communication forms*

The media emerged as a crucial agent that “plays a huge role” (R5) in the formation of brand perceptions. Media exposure generated by the event was regarded as one of the most important brand development opportunities for the host nation. An assessment of the legacy that the media accounted for after the event was indicated as the fact that many

journalists who would not have visited the nation had been able to do so and were therefore able to report more authentically and with a greater understanding of the nation's context.

The respondents gave some insights as to how stakeholders in both South Africa and the United Kingdom took several actions that aimed to address media concerns and leverage more authentic, positive and diverse reporting relating to the host nation. For both of these mega-events, there was a deliberate strategy and actions taken to "host" the media, as this was seen as an important opportunity not just for the event promotion but for the benefit of nation branding in general.

The foundations for the media relations were laid in the lead up to the 2010 mega-event. Local government authorities and tourism promotion agencies combined to create media tours, where selected key journalists from around the world were invited to the country to inspect the preparation for the 2010 event and also to acclimatise to the nation and assist them to write positive media reports in the lead up to the event. The following quotation explains the impact of this:

The media tours really helped a lot. The journalists we hosted in the country a year before the World Cup really helped. The perceptions started changing (R4).

During the event period, some of the host cities created media centres, separate from the official FIFA media and broadcasting centres. These were to allow accredited and, more especially, non-accredited media persons a place to base themselves during the event, where they would have access to an office area, information and interviews pertaining to the event and the tourist destination and, in some cases, special offers and excursions for media representatives. The mega-event attracted a large number of unaccredited media representing a diverse array of media forms, such as "bloggers" and social media web site journalists, who are usually not catered for through traditional media hosting mechanisms. The following quotation indicates the opportunities created through these media centres especially for the unaccredited, new media:

This [the media centre] provides a home for them. From there it gives them a place to work and us set up to facilitate their needs and stories suggested. [. . .] it gives us a chance to talk to them, to brief them on non-sport matters too (R12).

4.2 Local citizens: mobilise the internal brand support

The World Cup provided "an opportunity to portray a more positive image of the country both internally and externally" (R2). Besides the external brand component portrayed through the media, the impact of the event on the local population was described as of vital importance to leveraging nation brand development, chiefly through fostering social cohesion and national pride or confidence. Focusing on the internal impacts on the brand, respondents noted the World Cup's influence on local residents, in terms of increased sense of national pride, social cohesion, self-confidence and a general "feel-good factor" (R2).

Showcasing happy, friendly, excited and united local citizens was also described as a crucial element in the portrayal of more authentic future nation brand imagery. The significance of this, especially in the case of South Africa, given its tumultuous political and social history, is explained in the quotation below:

For decades people only saw images of violence and crime so it was important to highlight the fun, the people and not the wildlife (R4).

What transpired during the event was that the world saw "people celebrating in the street, people walking, people happy, people smiling" and "a fun, vibrant country that liked to party" (R1). The stakeholders clearly identified a close link between the internal brand and the overall nation brand development and therefore designed leveraging campaigns to activate and mobilise support, enthusiasm and national pride among the residents. Campaigns such as "Fly the flag for South Africa" were directed at the local citizens, "to

mobilize the nation to support the event” and “to promote South Africa as a positive brand” (R4). This leveraging campaign encouraged citizens to make the national flag prominent, to wear the national team colours, to learn the “Diski” special dance created for the event and learn to sing the national anthem. Another campaign, “Football Friday”, promoted the wearing of the national team shirt on Fridays in the year leading up to the event. The following assessment of these activities was provided:

It was these kinds of fun things that got the country mobilised to demonstrate that we are proud to be South African. This is who we are: we’re full of fun; we’re very friendly. And I think the foreigners experienced that (R4).

4.3 Stakeholders: co-create brand value through stakeholder partnerships

A number of stakeholders referred to the working relationship with other stakeholders as “partnerships”. This indicates a close association between the entities, to achieve a set of common goals related to the opportunities created by the event. One stakeholder emphasised the importance of partnerships between different parties, insisting that his organisation looks for opportunities to partner with the rights holder, sponsors and the local organisers or host cities as they realise the potential of co-creating brand value:

Wherever there is opportunity for relationship we try build each other up (R27).

The stakeholders mentioned the improvement of relationships between private and public sectors, as well as the improved co-operation between different government levels and departments. In some instances, stakeholders noted difficulties and challenges working with different stakeholders, although these initial challenges were said to have improved over time, to a point where stakeholders expressed an intention for these partnerships to be sustained. In some instances, where there was initial conflict, a stakeholder needed to indicate how the cooperation between the parties would result in benefits for both.

An example was also given of different stakeholders collectively partnering to form an umbrella brand to achieve similar outcomes, in this case broadly leveraging the event opportunity to engage with the business and investment industry. This partnership was so successful that it has continued to operate the umbrella brand at other sport mega-events post 2010:

We knew there would be a whole lot of people, very powerful people, business people, coming on hospitality packages as guests of companies, sponsors, etc. So we set up this place where visiting business people could be brought together with local business people. We created “Connected Cape Town” that was an umbrella brand that covered [a range of stakeholders]. We all worked in partnership (R4).

4.4 Tourism experience: create brand experiences and engagement opportunities

Referring to the tourism experience, one stakeholder mentioned that during the event, “Everywhere you went people were having a good time” (R18). It was not just by chance that the experience was “everywhere”. The rights holders worked together with the event management and host cities to create areas outside of the stadia for tourists and locals to enjoy the event experience in a more controlled manner. The official FIFA Fan Fests (fan parks) in each host city became places associated with the event experience, featuring live screenings of the matches combined with entertainment, food and beverages and other activities and experiences offered by official sponsors. The City of Cape Town extended the event experience further by creating a “Fan Walk” that linked the fan park to the stadium and also to the main transportation hubs and prime tourist attractions in the vicinity. Essentially, the city created a 2.4 km route for the fans, tourists and locals that combined walkways, footbridges and major roads (that were pedestrianised on match days) and were filled with a series of organised events, street performers and vendors. The combined result was “a spectacle of colour and spirit” that became a feature of the event experience in Cape Town in its own right (R10). These spaces extended the event experience and

created innovative ways to experience the inner city. The success of this initiative has led to the fan walk model being used at events following the 2010 World Cup, and it has become a core component for the city to leverage the match day experience within the city of Cape Town.

The stakeholders also mentioned the importance of non-event-specific tourism infrastructure and services as crucial to the tourist experience. Hotels and accommodation, public transport, airports and the availability of other tourist offerings and attractions (such as safaris) are all noted as part of this experience. Stakeholders confirmed that although the sport tourists may be in the nation primarily for the event, they are also interested in other more usual tourist activities and attractions. One stakeholder described these activities as the “mix of experiences” that forms a destination “package” (R3). It is therefore necessary for the stakeholders to view a mega-event as part of a broader, more holistic approach to nation branding, which includes all the other elements of the brand, especially those of importance to tourists, even though not specifically created for or linked to the sport mega-event.

4.5 Design: showcase or create iconic brand elements

Stakeholders mentioned each of the following examples of brand elements that were showcased through the event, namely, physical urban iconic development (e.g. the new stadia and urban scenes during event broadcasts), geographic icons (e.g. the BBC media centre featured the natural backdrop of Table Mountain prominently in its media coverage from the city of Cape Town), cultural icons (e.g. national history and dance showcased during the opening ceremony) and even political or celebrity icons (e.g. Nelson Mandela paraded at the closing ceremony). Similarly, experts involved in the London 2012 Olympic Games explained how they showcased existing cultural or historical design icons through the sport event, for example, using the Horse Guard’s Parade as the backdrop for the beach volleyball competition and Buckingham Palace as the backdrop for the start and/or ending points of a number of events such as the marathon, walk and triathlon. Importantly, these were all strategic decisions made by stakeholders to leverage the iconic showcasing potential of the sport mega-event.

Relating to the infrastructure and regeneration projects linked to the event, the respondents mentioned that it is not merely the creation of these tangible structures that added to the nation brand reputation and image development but, most importantly, the design, aesthetic and iconographic elements of these developments. Design is therefore an important consideration for the future development of sport facilities and, more broadly, urban development.

4.6 Sustainable development: leverage the event as a catalyst for sustainable development and urban transformation

The respondents’ experiences confirmed that a mega-event’s perceived success is in large part attributed to the event-linked urban development projects, especially those aimed at improving crucial areas of urban and tourism infrastructure. Besides the stadia, private and public entities in the host cities and provinces invested heavily in building facilities and infrastructure or in urban rejuvenation projects. In both Cape Town and Durban, the areas from the fan park to the stadium precinct received an urban regeneration facelift. While many of these projects were public sector funded, there were also examples of private sector developments linked to the event. In Cape Town alone, five new five-star hotels were built in the lead up to the event – a significant boost to high-end tourist accommodation. There was evidence of this development even in the smaller host cities, with a stakeholder from Mbombela municipal area (Nelspruit) explaining that the city had benefited significantly from infrastructural development projects such as a new stadium, road and transport improvements and other tourism services developments. All of these developments were mentioned as contributing to the tourism, investment and overall nation branding legacy for the host nation.

Leveraging these gains remains a challenge though for stakeholders, who will need to ensure that these developments are utilised and sustained.

However, not all of these examples have been positively sustained post the event, with some of the new stadia mentioned as particularly worrying examples of this. Some cities were mentioned as having leveraged the event opportunity more effectively than others. For example, Durban was mentioned as an example where the event-linked development and regeneration provided a boost to the city's tourism reputation. The stadium in Cape Town was mentioned as one that is not being utilised effectively enough and therefore not considered a sustainable legacy at the time of this study. Sustaining the stadia is therefore an important part of the event leveraging. This relates to economic viability of the stadia as well as their other potential usage and benefit for the host city. Examples of more effective post-event leveraging of stadia were given, such as linking with multi-purpose, commercial activities, e.g. the stadium in Durban that features a bungee-jump, retail and restaurant attractions and has hosted a variety of other sport and charity-linked events. Beyond this, the stadia can also be leveraged as key domestic and international tourist attractions in their own right, forming part of the destination branding mix of the host cities. A stakeholder alluded to the challenge of leveraging the stadia, urging stakeholders to "think outside the box" (R23) with regards to the leveraging activities that can be undertaken.

4.7 Event hosting: sustain the momentum of an operationally successful event through hosting future events

Although acknowledging the positive impacts and leveraging activities detailed already, stakeholders also highlighted a number of missed opportunities and noted opportunities to leverage the branding impacts beyond the event period. The respondents raised a concern regarding an over-emphasis on planning for the event's operational success at the expense of post-event leveraging. All stakeholders noted the need for post-event leveraging, with some noting "a missed opportunity to keep the momentum going" and "not leveraging the benefits actively enough" (R5). For example, on-going media exposure was noted as "just as important as the positive publicity received during the tournament", and that "building on the momentum" that the World Cup provided was vital (R6). Leveraging the branding benefits was considered a challenge, with "much too little attention paid to post-tournament leverage" (R3), with possible reasons for this stated as "a lack of budgeting" or "because people were just exhausted at the end of the event" (R3). The same stakeholder (R3) noted the need to "gather the lessons learned" from the event as a possible platform for further leveraging of the benefits gained.

Some of the stakeholders were particularly critical at the lack of post-event leveraging, particularly within the tourism industry. They also offered potential solutions for leveraging from future events, relating to strategy, policy and actions that should be implemented. One stakeholder noted the need to "gather the lessons learned" (R3) from the event as a possible platform for further leveraging of the benefits gained. Another advocated that, "we need to put some actions in place to make sure we reap those rewards and benefits" (R19). The stakeholders certainly supported the need for a post-event strategy or master plan to leverage the post-event period. A useful recommendation made by two of the stakeholders was to view the event planning process as three distinct parts all of equal importance, namely, the pre-event, during and post-event periods. Each of these periods requires adequate planning, budgeting and staffing to ensure that the opportunities are leveraged most effectively:

There should be some sort of a master plan that's associated with events and the master plan should revolve around the build-up to the event, managing the actual event and the managing of the warm-down strategy (R19).

There was also emphatic agreement among the respondents that the positive experience of the 2010 mega-event should be sustained through the hosting of future events. While the type and scale of the event was not agreed upon, they indicated this as one of the key ways

to leverage the nation branding legacy. The confidence gained through hosting a successful mega-event, the knowledge and skills developed as well as the infrastructure and the event planning in place were all reasons for this support. The success of the 2010 event was seen as enhancing the appeal of the nation as a host of future events, with one stakeholder referring to the “blueprint” for a future mega-event already being in place (R9). A number of respondents called for a national events strategy to manage and carefully leverage the post-2010 period. Such a strategy should include a number of stakeholders that collectively decide upon the events that are beneficial for the nation and the objectives for each event that is hosted.

5. Discussion

Smith (2014, p. 16) proposed that sport mega-events be “reconceived as windows of opportunity within which to undertake initiatives”. The respondents certainly showed an awareness of mega-events creating opportunities for a number of leveraging activities. From the findings, it is clear that a wide variety of activities were planned for the pre-event and event period to leverage the nation branding opportunity. However, very little was planned for the post-event period, despite some positive intentions and suggestions.

It appears that foremost in their view was the importance of the media. From the experiences of both 2010 and 2012 brand stakeholders, it is clear that there needs to be a management plan to cater for and host the new media forms as well as the traditional media representatives. It is evident that this process begins before the event, hosting media delegations and working with the media to source desirable studio locations that showcase iconic brand elements.

Although the literature acknowledges the vital role of the internal brand image component, the emphasis on the internal brand through mobilising the support of the local citizens was a more surprising leveraging emphasis by the stakeholders. However, given the more recent experience in Brazil (2014 FIFA World Cup hosts) where the local citizens orchestrated wide-scale protests against the event organisers and national government that at some stages threatened the event hosting, this emphasis seems justified. Given the criticisms of mega-events largely attributed to their social benefits, the support of the local population for an event is paramount. Indeed, the positive manner in which the local population embraced the 2010 mega-event was perceived as a powerful motivator of the new brand images for the nation through the event.

While mega-events are commonly associated with urban development and regeneration projects, the findings indicated that a greater emphasis needs to be placed on the sustainability of these projects and the longer-term planning of their use, particularly in the case of the new stadia built for an event. Furthermore, from a branding perspective, the respondents indicated that planning of these development schemes should consider design aspects that authentically reflect the nation brand. Montana *et al.* (2007) argued that design can be successfully used as a competitive differentiating factor for brands, and the respondents noted that it was the design of many of the new facilities that helped to distinguish the 2010 event from previous hosts.

Despite these positive leveraging activities, it is surprising that there was not much planning regarding post-event leveraging. While there was strong advocacy for post-event leveraging activities, there did not seem to be any sense of plan, strategy or urgency to do so. The respondents mentioned a lack of energy perhaps for this or a lack of resources including budget and personnel. A lack of post-event leveraging therefore calls into question the longevity of nation branding gains for a host nation.

Also of great interest is that the literature does not specifically mention the operational success of an event being a crucial element of perceived brand image success. Perhaps especially so in the case of an emerging nation, an operationally successful mega-event is a significant outcome for a nation brand in itself. This is perhaps why the hosting of future

sport and non-sport events, both mega-events and smaller events were mentioned as a key means to sustain the nation branding momentum. However, the respondents recommended that this should be the starting point for further leveraging of other brand legacies and not a detriment to the planning and implementation of legacy projects.

6. Conclusion

This paper has explored the emerging discourse of nation branding in the context of sport mega-events and in particular the manner in which stakeholders can strategically leverage the opportunities created by these events for a host nation's brand. The findings revealed seven key focus areas to be leveraged, namely, the media, local citizen support, stakeholder partnership, the tourism experience, iconic design, sustainable development and future events. This study emphasises the planning of leveraging, especially for the post-event period, which is often neglected due to budget and personnel demands.

This paper adds to previous studies by raising awareness of the need to leverage the new media and social media linked to a mega-event. The significant leveraging potential of mobilising the local citizens has been overlooked in many instances. This is especially pertinent in light of the social protests surrounding the 2014 FIFA World Cup in Brazil and the critiques of mega-events that most often relate to the social impact of these events. While many studies have documented urban development and regeneration through sport mega-events, this paper advocates that these be considered within a sustainable development framework that considers the nation's strategic developmental objectives. The South African case also emphasises the role of authentic design and iconography as an important branding element that can be showcased through these developments.

While the responses relating to the nation branding legacy for the 2010 mega-event host nation were very positive, the missed opportunities and lack of strategic planning to capitalise on these leave a question mark over the longevity of these gains. Stakeholders are therefore urged to plan this process more deliberately to leverage the opportunity more effectively, before, during and, most importantly, after the event.

While it appears disheartening that post-event leveraging may be sidelined as a result of an over-emphasis on operational success, it is also evident that successful event management in itself can be considered a boost to nation brand development. A successfully management event would lead to the hosting of future events, and continued reinforcement of such competent event management would in itself be regarded as a benefit for the nation brand. This is perhaps why the respondents identified a national events strategy as a key post-event leveraging focus for South Africa post the 2010 mega-event.

This paper therefore supports the emerging leveraging discourse and affirms the leveraging imperative for nation brand stakeholders in the context of a sport mega-event. It is clear that the nation branding legacy for the host nation is a result of strategic activities and campaigns undertaken by a wide range of stakeholders before, during and post the event. The contention of this paper is that a nation branding legacy does not automatically occur for host nations. It is a combination of the opportunities provided by the sport mega-event and the strategic intention and activities of stakeholders.

Importantly, this paper has not provided an audit of the leveraging activities linked to this mega-event, nor has it accounted for the costs and opportunity costs occurred in achieving these benefits. It is recommended that future studies include more holistic assessments that account for these aspects. Although the focus on a specific case has allowed for an in-depth analysis of the particular context of this event, the inclusion of international experts and the reference to other international events and contexts leads the authors to propose the transferability of these findings to other contexts, although particularly so among emerging nations with developing nation brands.
