# INF3580/4580 - Semantic Technologies - Spring 2018 

Lecture 11: OWL 2

Ernesto Jimenez-Ruiz

3rd April 2018

University of Oslo

## Outline

(1) Reminder: $\mathcal{A L C}$
(2) Important assumptions
(3) OWL 2

- Axioms and assertions using individuals
- Concept Restrictions
- Modelling 'problems'
- Roles
- Datatypes

## The $\mathcal{A L C}$ Description Logic

```
Vocabulary
Fix a set of atomic concepts {\mp@subsup{A}{1}{},\mp@subsup{A}{2}{},\ldots}, roles {\mp@subsup{R}{1}{},\mp@subsup{R}{2}{},\ldots}\mathrm{ and individuals }{\mp@subsup{a}{1}{},\mp@subsup{a}{2}{},\ldots}.
```

## The $\mathcal{A L C}$ Description Logic

## Vocabulary

Fix a set of atomic concepts $\left\{A_{1}, A_{2}, \ldots\right\}$, roles $\left\{R_{1}, R_{2}, \ldots\right\}$ and individuals $\left\{a_{1}, a_{2}, \ldots\right\}$.

## $\mathcal{A L C}$ concept descriptions

$$
\begin{array}{ll|l}
C, D \rightarrow & A_{i} & \text { (atomic concept) } \\
& \top & \text { (universal concept } \\
& \perp & \text { (bottom concept) }
\end{array}
$$

## The $\mathcal{A L C}$ Description Logic

## Vocabulary

Fix a set of atomic concepts $\left\{A_{1}, A_{2}, \ldots\right\}$, roles $\left\{R_{1}, R_{2}, \ldots\right\}$ and individuals $\left\{a_{1}, a_{2}, \ldots\right\}$.

## $\mathcal{A L C}$ concept descriptions

| $C, D \rightarrow$ | $A_{i}$ | (atomic concept) |
| :--- | :--- | :--- |
|  | $\top$ | (universal concept) |
|  | $\perp$ | (bottom concept) |
|  | $\neg C$ | (negation) |
|  | $C \sqcap D$ | (intersection) |
|  | $C \sqcup D$ | (union) |

## The $\mathcal{A L C}$ Description Logic

## Vocabulary

Fix a set of atomic concepts $\left\{A_{1}, A_{2}, \ldots\right\}$, roles $\left\{R_{1}, R_{2}, \ldots\right\}$ and individuals $\left\{a_{1}, a_{2}, \ldots\right\}$.

## $\mathcal{A L C}$ concept descriptions

| $C, D \rightarrow$ | $A_{i}$ | (atomic concept) |
| :--- | :--- | :--- |
|  | $\top$ | (universal concept) |
|  | $\perp$ | (bottom concept) |
|  | $\neg C$ | (negation) |
|  | $C \sqcap D$ | (intersection) |
|  | $C \sqcup D$ | (union) |
|  | $\forall R_{i} . C$ | (universal restriction) |
|  | $\exists R_{i} . C$ | (existential restriction) |

## The $\mathcal{A L C}$ Description Logic

## Vocabulary

Fix a set of atomic concepts $\left\{A_{1}, A_{2}, \ldots\right\}$, roles $\left\{R_{1}, R_{2}, \ldots\right\}$ and individuals $\left\{a_{1}, a_{2}, \ldots\right\}$.

## $\mathcal{A L C}$ concept descriptions

| $C, D \rightarrow$ | $A_{i}$ | (atomic concept) |
| :--- | :--- | :--- |
|  | $\top$ | (universal concept) |
|  | $\perp$ | (bottom concept) |
|  | $\neg C$ | (negation) |
|  | $C \sqcap D$ | (intersection) |
|  | $C \sqcup D$ | (union) |
|  | $\forall R_{i} . C$ | (universal restriction) |
|  | $\exists R_{i} . C$ | (existential restriction) |

## Axioms

- $C \sqsubseteq D$ and $C \equiv D$ for concept descriptions $D$ and $C$.
- $C(a)$ and $R(a, b)$ for concept description $C$, atomic role $R$ and individuals $a, b$.

## $\mathcal{A L C}$ Semantics

## Interpretation

An interpretation $\mathcal{I}$ fixes a set $\Delta^{\mathcal{I}}$, the domain, $A^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}}$ for each atomic concept $A, R^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}}$ for each role $R$, and $a^{\mathcal{I}} \in \Delta^{\mathcal{I}}$ for each individual a.

## $\mathcal{A L C}$ Semantics

## Interpretation

An interpretation $\mathcal{I}$ fixes a set $\Delta^{\mathcal{I}}$, the domain, $A^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}}$ for each atomic concept $A, R^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}}$ for each role $R$, and $a^{\mathcal{I}} \in \Delta^{\mathcal{I}}$ for each individual $a$.

## Interpretation of concept descriptions

$$
\begin{aligned}
\top^{\mathcal{I}} & =\Delta^{\mathcal{I}} \\
\perp^{\mathcal{I}} & =\emptyset
\end{aligned}
$$

## $\mathcal{A L C}$ Semantics

## Interpretation

An interpretation $\mathcal{I}$ fixes a set $\Delta^{\mathcal{I}}$, the domain, $A^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}}$ for each atomic concept $A, R^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}}$ for each role $R$, and $a^{\mathcal{I}} \in \Delta^{\mathcal{I}}$ for each individual a.

## Interpretation of concept descriptions

$$
\begin{aligned}
\top^{\mathcal{I}} & =\Delta^{\mathcal{I}} \\
\perp^{\mathcal{I}} & =\emptyset \\
(\neg C)^{\mathcal{I}} & =\Delta^{\mathcal{I}} \backslash C^{\mathcal{I}} \\
(C \sqcap D)^{\mathcal{I}} & =C^{\mathcal{I}} \cap D^{\mathcal{I}} \\
(C \sqcup D)^{\mathcal{I}} & =C^{\mathcal{I}} \cup D^{\mathcal{I}}
\end{aligned}
$$

## $\mathcal{A L C}$ Semantics

## Interpretation

An interpretation $\mathcal{I}$ fixes a set $\Delta^{\mathcal{I}}$, the domain, $A^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}}$ for each atomic concept $A, R^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}}$ for each role $R$, and $a^{\mathcal{I}} \in \Delta^{\mathcal{I}}$ for each individual $a$.

## Interpretation of concept descriptions

$$
\begin{aligned}
\top^{\mathcal{I}} & =\Delta^{\mathcal{I}} \\
\perp^{\mathcal{I}} & =\emptyset \\
(\neg C)^{\mathcal{I}} & =\Delta^{\mathcal{I}} \backslash C^{\mathcal{I}} \\
(C \sqcap D)^{\mathcal{I}} & =C^{\mathcal{I}} \cap D^{\mathcal{I}} \\
(C \sqcup D)^{\mathcal{I}} & =C^{\mathcal{I}} \cup D^{\mathcal{I}} \\
(\forall R \cdot C)^{\mathcal{I}} & =\left\{a \in \Delta^{\mathcal{I}} \mid \text { for all } b, \text { if }\langle a, b\rangle \in R^{\mathcal{I}} \text { then } b \in C^{\mathcal{I}}\right\} \\
(\exists R \cdot C)^{\mathcal{I}} & =\left\{a \in \Delta^{\mathcal{I}} \mid \text { there is a } b \text { where }\langle a, b\rangle \in R^{\mathcal{I}} \text { and } b \in C^{\mathcal{I}}\right\}
\end{aligned}
$$

## $\mathcal{A L C}$ Semantics

## Interpretation

An interpretation $\mathcal{I}$ fixes a set $\Delta^{\mathcal{I}}$, the domain, $A^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}}$ for each atomic concept $A, R^{\mathcal{I}} \subseteq \Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}}$ for each role $R$, and $a^{\mathcal{I}} \in \Delta^{\mathcal{I}}$ for each individual $a$.

## Interpretation of concept descriptions

$$
\begin{aligned}
\top^{\mathcal{I}} & =\Delta^{\mathcal{I}} \\
\perp^{\mathcal{I}} & =\emptyset \\
(\neg C)^{\mathcal{I}} & =\Delta^{\mathcal{I}} \backslash C^{\mathcal{I}} \\
(C \sqcap D)^{\mathcal{I}} & =C^{\mathcal{I}} \cap D^{\mathcal{I}} \\
(C \sqcup D)^{\mathcal{I}} & =C^{\mathcal{I}} \cup D^{\mathcal{I}} \\
(\forall R \cdot C)^{\mathcal{I}} & =\left\{a \in \Delta^{\mathcal{I}} \mid \text { for all } b, \text { if }\langle a, b\rangle \in R^{\mathcal{I}} \text { then } b \in C^{\mathcal{I}}\right\} \\
(\exists R \cdot C)^{\mathcal{I}} & =\left\{a \in \Delta^{\mathcal{I}} \mid \text { there is a } b \text { where }\langle a, b\rangle \in R^{\mathcal{I}} \text { and } b \in C^{\mathcal{I}}\right\}
\end{aligned}
$$

Interpretation of Axioms

- $\mathcal{I} \models C \sqsubseteq D$ if $C^{\mathcal{I}} \subseteq D^{\mathcal{I}}$ and $\mathcal{I} \models C \equiv D$ if $C^{\mathcal{I}}=D^{\mathcal{I}}$
- $\mathcal{I} \models C(a)$ if $a^{\mathcal{I}} \in C^{\mathcal{I}}$ and $\mathcal{I} \models R(a, b)$ if $\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle \in R^{\mathcal{I}}$.

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{aligned}
& \text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } \\
& \text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp \\
& \text { Penguin(a) }
\end{aligned}
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety }, \text { terry }, \text { carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety }, \quad b^{\mathcal{I}}=\text { terry }
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety, terry, carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety }, \quad b^{\mathcal{I}}=\text { terry } \\
& \text { Penguin }
\end{aligned}
$$

## $\mathcal{A} \mathcal{L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety }, \text { terry, carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety }, \quad b^{\mathcal{I}}=\text { terry } \\
& \text { Penguin }=\left\{a^{\mathcal{I}}\right. \\
& \text { eats }^{\mathcal{I}}=\left\{\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle,\left\langle b^{\mathcal{I}}, \text { carl }\right\rangle\right\}
\end{aligned}
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety }, \text { terry, carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety }, \quad b^{\mathcal{I}}=\text { terry } \\
& \text { Penguin }=\left\{a^{\mathcal{I}}\right. \\
& \text { eats }^{\mathcal{I}}=\left\{\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle,\left\langle b^{\mathcal{I}}, \text { carl }\right\rangle\right\} \\
& \text { Fish }^{\mathcal{I}}=\left\{b^{\mathcal{I}}\right.
\end{aligned}
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{aligned}
& \text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } \\
& \text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp \\
& \text { Penguin(a) }
\end{aligned}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety }, \text { terry }, \text { carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety }, \quad b^{\mathcal{I}}=\text { terry } \\
& \text { Penguin } \\
& \text { eats }{ }^{\mathcal{I}}=\left\{\left\langlea^{\mathcal{I}}\right.\right. \\
& \text { Fish } \left.^{\mathcal{I}}=\left\{b^{\mathcal{I}}\right\rangle,\left\langle b^{\mathcal{I}}, \text { carl }\right\rangle\right\} \\
& \text { Anima } \mathcal{I}^{\mathcal{I}}=\left\{a^{\mathcal{I}}, b^{\mathcal{I}}\right.
\end{aligned}
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety, terry, carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety }, \quad b^{\mathcal{I}}=\text { terry } \\
& \text { Penguin } \\
& \text { eats }{ }^{\mathcal{I}}=\left\{\left\langle a^{\mathcal{I}}\right\}=\{\text { tweety }\}\right. \\
& \text { Fish } \left.^{\mathcal{I}}=\left\{b^{\mathcal{I}}\right\rangle,\left\langle b^{\mathcal{I}}, \text { carl }\right\rangle\right\}=\{\langle\text { tweety, terry }\rangle,\langle\text { terry, carl }\rangle\} \\
& \text { Anima } \mathcal{I}^{\mathcal{I}}=\left\{a^{\mathcal{I}}, b^{\mathcal{I}}\right\}=\{\text { tweety, terry }\}
\end{aligned}
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety, terry, carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety }, \quad b^{\mathcal{I}}=\text { terry } \\
& \text { Penguin } \\
& \text { eats }{ }^{\mathcal{I}}=\left\{\left\langle a^{\mathcal{I}}\right\}=\{\text { tweety }\}\right. \\
& \text { Fish } \left.^{\mathcal{I}}=\left\{b^{\mathcal{I}}\right\rangle,\left\langle b^{\mathcal{I}}, \text { carl }\right\rangle\right\}=\{\langle\text { tweety, terry }\rangle,\langle\text { terry, carl }\rangle\} \\
& \text { Anima } \mathcal{I}^{\mathcal{I}}=\left\{a^{\mathcal{I}}, b^{\mathcal{I}}\right\}=\{\text { tweety, terry }\}
\end{aligned}
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{aligned}
& \text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } \\
& \text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp \\
& \text { Penguin(a) }
\end{aligned}
$$

Let $\mathcal{I}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{I}}=\top^{\mathcal{I}}=\{\text { tweety, terry, carl }\}, \quad \perp^{\mathcal{I}}=\emptyset, \quad a^{\mathcal{I}}=\text { tweety, } \quad b^{\mathcal{I}}=\text { terry } \\
& \text { Penguin } \\
& \text { eats }{ }^{\mathcal{I}}=\left\{a^{\mathcal{I}}\right\}=\{\text { tweety }\} \\
& \text { Fish } \left.^{\mathcal{I}}=\left\{b^{\mathcal{I}}\right\}=\left\{b^{\mathcal{I}}\right\rangle,\left\langle b^{\mathcal{I}}, \text { carl }\right\rangle\right\}=\{\langle\text { tweety }, \text { terry }\rangle,\langle\text { terry }, \text { carl }\rangle\} \\
& \text { Anima } \mathcal{I}^{\mathcal{I}}=\left\{a^{\mathcal{I}}, b^{\mathcal{I}}\right\}=\{\text { tweety, terry }\}
\end{aligned}
$$

Now $\mathcal{I} \vDash \mathcal{K}$.

## $\mathcal{A} \mathcal{L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{J}$ be an interpretation such that

## $\mathcal{A} \mathcal{L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{J}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{J}}=\top^{\mathcal{J}}=\{\text { tweety }\}, \quad \perp^{\mathcal{J}}=\emptyset, \quad a^{\mathcal{J}}=\text { tweety, } b^{\mathcal{J}}=\text { tweety } \\
& \text { Animal } \mathcal{I}^{\mathcal{J}}=\left\{a^{\mathcal{J}}, b^{\mathcal{J}}\right\}=\{\text { tweety }\}, \\
& \text { Penguin } \mathcal{J}=\left\{a^{\mathcal{J}}\right\}=\{\text { tweety }\}, \\
& \text { Fish }^{\mathcal{J}}=\left\{b^{\mathcal{J}}\right\}=\{\text { tweety }\} \\
& \text { eats }{ }^{\mathcal{J}}=\left\{\left\langle a^{\mathcal{J}}, b^{\mathcal{J}}\right\rangle,\left\langle b^{\mathcal{J}}, a^{\mathcal{J}}\right\rangle\right\}=\{\langle\text { tweety, tweety }\rangle\}
\end{aligned}
$$

## $\mathcal{A L C}$ Examples

Let $\mathcal{K}$ be the following set of axioms:

$$
\begin{array}{lr}
\text { Penguin } \sqsubseteq \text { Animal } \sqcap \forall \text { eats.Fish } & \text { Fish } \sqsubseteq \text { Animal } \\
\text { Penguin } \sqcap \text { Fish } \sqsubseteq \perp & \text { Animal } \sqsubseteq \exists \text { eats. } \top \\
\text { Penguin }(a) & \text { eats }(a, b)
\end{array}
$$

Let $\mathcal{J}$ be an interpretation such that

$$
\begin{aligned}
& \Delta^{\mathcal{J}}=\top^{\mathcal{J}}=\{\text { tweety }\}, \quad \perp^{\mathcal{J}}=\emptyset, \quad a^{\mathcal{J}}=\text { tweety, } b^{\mathcal{J}}=\text { tweety } \\
& \text { Animal } \mathcal{J}^{\mathcal{J}}=\left\{a^{\mathcal{J}}, b^{\mathcal{J}}\right\}=\{\text { tweety }\}, \\
& \text { Penguin }{ }^{\mathcal{J}}=\left\{a^{\mathcal{J}}\right\}=\{\text { tweety }\}, \\
& \text { Fish }^{\mathcal{J}}=\left\{b^{\mathcal{J}}\right\}=\{\text { tweety }\} \\
& \text { eats }^{\mathcal{J}}=\left\{\left\langle a^{\mathcal{J}}, b^{\mathcal{J}}\right\rangle,\left\langle b^{\mathcal{J}}, a^{\mathcal{J}}\right\rangle\right\}=\{\langle\text { tweety, tweety }\rangle\}
\end{aligned}
$$

Now $\mathcal{J} \not \models \mathcal{K}$ since $\mathcal{J} \not \models$ Penguin $\sqcap$ Fish $\sqsubseteq \perp$.

## Modelling patterns

So, what can we say with $\mathcal{A L C}$ ?
$\checkmark$ Every person has a mother.
$\checkmark$ Penguins eats only fish. Horses eats only chocolate.
$X$ Every nuclear family has two parents, at least two children and a dog.
$\checkmark$ No smoker is a non-smoker (and vice versa).
$X$ Everybody loves Mary.
$X$ Adam is not Eve (and vice versa).
$\checkmark$ Everything is black or white.
$\checkmark$ There is no such thing as a free lunch.
$x$ Brothers of fathers are uncles.
$X$ My friend's friends are also my friends.
$X$ If Homer is married to Marge, then Marge is married to Homer.
$X$ If Homer is a parent of Bart, then Bart is a child of Homer.
Today we'll learn how to say more.

## Outline

## (1) Reminder: $\mathcal{A L C}$

(2) Important assumptions
(3) OWL 2

- Axioms and assertions using individuals
- Concept Restrictions
- Modelling 'problems'
- Roles
- Datatypes

## World assumptions

- Closed World Assumption (CWA)
- Open World Assumption (OWA)

CWA:

- Complete knowledge.
- Any statement that is not known to be true is false. (*)
- Typical semantics for database systems.

OWA:

- Potential incomplete knowledge.
- (*) does not hold.
- Typical semantics for logic-based systems.

## Name assumptions

- Unique name assumption (UNA)
- Non-unique name assumption (NUNA)
- Under any assumption, equal names (read: individual URIs, DB constants) always denote the same "thing" (obviously).
- E.g., cannot have $a^{\mathcal{I}} \neq a^{\mathcal{I}}$.
- Under UNA, different names always denote different things.
- E.g., $a^{\mathcal{I}} \neq b^{\mathcal{I}}$.
- common in relational databases.
- Under NUNA, different names need not denote different things.
- Can have , $a^{\mathcal{I}}=b^{\mathcal{I}}$, or
- dbpedia:Oslo ${ }^{\mathcal{I}}=$ geo: $34521^{\mathcal{I}}$.

## Outline

## (1) Reminder: $\mathcal{A L C}$

(2) Important assumptions
(3) OWL 2

- Axioms and assertions using individuals
- Concept Restrictions
- Modelling 'problems'
- Roles
- Datatypes

## $\mathcal{S R O I} \mathcal{Q}(\mathcal{D})$ and OWL 2

- OWL 2 is based on the DL $\mathcal{S R O \mathcal { O } ( \mathcal { D } ) \text { : }}$
- $\mathcal{S}$ for $\mathcal{A L C}{ }^{1}$ plus role transitivity,
- $\mathcal{R}$ for (complex) roles inclusions,
- $\mathcal{O}$ for closed classes,
- I for inverse roles,
- $\mathcal{Q}$ for qualified cardinality restrictions, and
- $\mathcal{D}$ for datatypes.

[^0]
## $\mathcal{S R O I} \mathcal{Q}(\mathcal{D})$ and OWL 2

- OWL 2 is based on the DL $\mathcal{S R O \mathcal { O } ( \mathcal { D } ) \text { : }}$
- $\mathcal{S}$ for $\mathcal{A} \mathcal{L C}^{1}$ plus role transitivity,
- $\mathcal{R}$ for (complex) roles inclusions,
- $\mathcal{O}$ for closed classes,
- I for inverse roles,
- $\mathcal{Q}$ for qualified cardinality restrictions, and
- $\mathcal{D}$ for datatypes.
- So, today we'll see:
- new concept and role builders,
- new TBox axioms,
- new ABox axioms,
- new RBox axioms, and
- datatypes.

[^1]
## Outline

(1) Reminder: $\mathcal{A L C}$
(2) Important assumptions
(3) OWL 2

- Axioms and assertions using individuals
- Concept Restrictions
- Modelling 'problems'
- Roles
- Datatypes

## Individual identity

- New ABox axioms.
- Express equality and non-equality between individuals.

## Individual identity

- New ABox axioms.
- Express equality and non-equality between individuals.
- Syntax:
- DL: $a=b, a \neq b$;
- RDF/OWL: :a owl:sameAs :b, :a owl:differentFrom :b,
- Manchester: SameAs, DifferentFrom.

## Individual identity

- New ABox axioms.
- Express equality and non-equality between individuals.
- Syntax:
- DL: $a=b, a \neq b$;
- RDF/OWL: :a owl:sameAs :b, :a owl:differentFrom :b,
- Manchester: SameAs, DifferentFrom.
- Semantics:
- $\mathcal{I} \models a=b$ iff $a^{\mathcal{I}}=b^{\mathcal{I}}$
- $\mathcal{I} \models a \neq b$ iff $a^{\mathcal{I}} \neq b^{\mathcal{I}}$

## Individual identity

- New ABox axioms.
- Express equality and non-equality between individuals.
- Syntax:
- DL: $a=b, a \neq b$;
- RDF/OWL: :a owl:sameAs :b, :a owl:differentFrom :b,
- Manchester: SameAs, DifferentFrom.
- Semantics:
- $\mathcal{I} \models a=b$ iff $a^{\mathcal{I}}=b^{\mathcal{I}}$
- $\mathcal{I} \models a \neq b$ iff $a^{\mathcal{I}} \neq b^{\mathcal{I}}$
- Examples:
- sim:Bart owl:sameAs dbpedia:Bart_Simpson,
- sim:Bart owl:differentFrom sim:Homer.

## Individual identity

- New ABox axioms.
- Express equality and non-equality between individuals.
- Syntax:
- DL: $a=b, a \neq b$;
- RDF/OWL: :a owl:sameAs :b, :a owl:differentFrom :b,
- Manchester: SameAs, DifferentFrom.
- Semantics:
- $\mathcal{I} \models a=b$ iff $a^{\mathcal{I}}=b^{\mathcal{I}}$
- $\mathcal{I} \models a \neq b$ iff $a^{\mathcal{I}} \neq b^{\mathcal{I}}$
- Examples:
- sim:Bart owl:sameAs dbpedia:Bart_Simpson,
- sim:Bart owl:differentFrom sim:Homer.
- Remember:
- Non unique name assumption (NUNA) in Sem. Web,
- must sometimes use $=$ and $\neq$ to get expected results.

## Creating concepts using individuals

- New concept builder.

## Creating concepts using individuals

- New concept builder.
- Create (anonymous) concepts by explicitly listing all members.

## Creating concepts using individuals

- New concept builder.
- Create (anonymous) concepts by explicitly listing all members.
- Called closed classes in OWL.

## Creating concepts using individuals

- New concept builder.
- Create (anonymous) concepts by explicitly listing all members.
- Called closed classes in OWL.
- Syntax:
- DL: $\{a, b, \ldots\}$
- RDF/OWL: owl:oneOf + rdf:List++
- Manchester: $\{\mathrm{a}, \mathrm{b}, \ldots\}$

## Creating concepts using individuals

- New concept builder.
- Create (anonymous) concepts by explicitly listing all members.
- Called closed classes in OWL.
- Syntax:
- DL: $\{a, b, \ldots\}$
- RDF/OWL: owl:oneOf + rdf:List++
- Manchester: $\{\mathrm{a}, \mathrm{b}, \ldots\}$
- Example:
- SimpsonFamily $\equiv$ \{Homer, Marge, Bart, Lisa, Maggie $\}$
- :SimpsonFamily owl:equivalentClass [owl:oneOf (:Homer :Marge :Bart :Lisa :Maggie)] .

## Creating concepts using individuals

- New concept builder.
- Create (anonymous) concepts by explicitly listing all members.
- Called closed classes in OWL.
- Syntax:
- DL: $\{a, b, \ldots\}$
- RDF/OWL: owl:oneOf + rdf:List++
- Manchester: $\{\mathrm{a}, \mathrm{b}, \ldots\}$
- Example:
- SimpsonFamily $\equiv$ \{Homer, Marge, Bart, Lisa, Maggie $\}$
- :SimpsonFamily owl:equivalentClass [owl:oneOf (:Homer :Marge :Bart :Lisa :Maggie)] .
- Note:
- The individuals does not necessarily represent different objects,
- we still need $=$ and $\neq$ to say that members are the same/different.
- "Closed classes of data values" are datatypes.

## Axioms involving individuals: Negative Property Assertions

- New ABox axiom.
- Syntax:
- DL: $\neg R(a, b)$,
- RDF/OWL: owl:NegativePropertyAssertion (Class of assertions/triples)
- Manchester: a not R b.

## Axioms involving individuals: Negative Property Assertions

- New ABox axiom.
- Syntax:
- DL: $\neg R(a, b)$,
- RDF/OWL: owl:NegativePropertyAssertion (Class of assertions/triples)
- Manchester: a not R b.
- Semantics:
- $\mathcal{I} \models \neg R(a, b)$ iff $\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle \notin R^{\mathcal{I}}$,

## Axioms involving individuals: Negative Property Assertions

- New ABox axiom.
- Syntax:
- DL: $\neg R(a, b)$,
- RDF/OWL: owl:NegativePropertyAssertion (Class of assertions/triples)
- Manchester: a not R b.
- Semantics:
- $\mathcal{I} \models \neg R(a, b)$ iff $\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle \notin R^{\mathcal{I}}$,
- Notes:
- Works both for object properties and datatype properties.

## Axioms involving individuals: Negative Property Assertions

- New ABox axiom.
- Syntax:
- DL: $\neg R(a, b)$,
- RDF/OWL: owl:NegativePropertyAssertion (Class of assertions/triples)
- Manchester: a not R b.
- Semantics:
- $\mathcal{I} \models \neg R(a, b)$ iff $\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle \notin R^{\mathcal{I}}$,
- Notes:
- Works both for object properties and datatype properties.
- Examples:
- :Bart not :hasFather :NedFlanders
- :Bart not :hasAge "2"~^xsd:int

## Outline

(1) Reminder: $\mathcal{A L C}$
(2) Important assumptions
(3) OWL 2

- Axioms and assertions using individuals
- Concept Restrictions
- Modelling 'problems'
- Roles
- Datatypes

## Recap of existential and universal restrictions

- Existential restrictions
- have the form $\exists R . D$,
- typically used to connect classes,
- $C \sqsubseteq \exists R . D$ : $\mathrm{A} C$ is $R$-related to (at least) some $D$ :
- Example: A person has a female parent: Person $\sqsubseteq \exists h a s P a r e n t . W o m a n . ~$
- Note that $C$-objects can be $R$-related to other things:
- A person may have other parents who are not women-but there should be one who's a woman.

## Recap of existential and universal restrictions

- Existential restrictions
- have the form $\exists R . D$,
- typically used to connect classes,
- $C \sqsubseteq \exists R . D$ : $\mathrm{A} C$ is $R$-related to (at least) some $D$ :
- Example: A person has a female parent: Person $\sqsubseteq \exists h a s P a r e n t . W o m a n . ~$
- Note that $C$-objects can be $R$-related to other things:
- A person may have other parents who are not women-but there should be one who's a woman.
- Universal restrictions
- have the form $\forall R . D$,
- restrict the things an object can be connected to,
- $C \sqsubseteq \forall R . D$ : $C$ is $R$-related to D's only:
- Example: A horse eats only chocolate: Horse $\sqsubseteq \forall$ eats. Chocolate.
- Note that $C$-objects may not be $R$-related to anything at all:
- A horse does not have to eat something-but if it does it must be chocolate.

## Cardinality restrictions

- New concept builder.
- Syntax:
- DL: $\leq_{n} R . D$ and $\geq_{n} R . D$ (and $={ }_{n} R . D$ ).
- RDF/OWL: owl:minCardinality, owl:maxCardinality, owl:cardinality.
- Manchester: min, max, exactly.

## Cardinality restrictions

- New concept builder.
- Syntax:
- DL: $\leq_{n} R . D$ and $\geq_{n} R . D$ (and $={ }_{n} R . D$ ).
- RDF/OWL: owl:minCardinality, owl:maxCardinality, owl:cardinality.
- Manchester: min, max, exactly.
- Semantics:
- $\left(\leq_{n} R . D\right)^{\mathcal{I}}=\left\{a \in \Delta^{\mathcal{I}}:\left|\left\{b:\langle a, b\rangle \in R^{\mathcal{I}} \wedge b \in D^{\mathcal{I}}\right\}\right| \leq n\right\}$
- $\left(\geq_{n} R . D\right)^{\mathcal{I}}=\left\{a \in \Delta^{\mathcal{I}}:\left|\left\{b:\langle a, b\rangle \in R^{\mathcal{I}} \wedge b \in D^{\mathcal{I}}\right\}\right| \geq n\right\}$
- Restricts the number of relations a type of object can/must have.

## Cardinality restrictions

- New concept builder.
- Syntax:
- DL: $\leq_{n} R . D$ and $\geq_{n} R . D$ (and $={ }_{n} R . D$ ).
- RDF/OWL: owl:minCardinality, owl:maxCardinality, owl:cardinality.
- Manchester: min, max, exactly.
- Semantics:
- $\left(\leq_{n} R . D\right)^{\mathcal{I}}=\left\{a \in \Delta^{\mathcal{I}}:\left|\left\{b:\langle a, b\rangle \in R^{\mathcal{I}} \wedge b \in D^{\mathcal{I}}\right\}\right| \leq n\right\}$
- $\left(\geq_{n} R . D\right)^{\mathcal{I}}=\left\{a \in \Delta^{\mathcal{I}}:\left|\left\{b:\langle a, b\rangle \in R^{\mathcal{I}} \wedge b \in D^{\mathcal{I}}\right\}\right| \geq n\right\}$
- Restricts the number of relations a type of object can/must have.
- TBox axioms read:
- $C \sqsubseteq \square_{n} R . D:$ "A C is R-related to $n$ number of D's."
- $\leq$ : at most
- $\geq$ : at least
- =: exactly

## Example cardinality restriction

- Car $\sqsubseteq \leq{ }_{2}$ driveAxle. $\top$
- "A car has at most two drive axles."

## Example cardinality restriction

- Car $\sqsubseteq \leq{ }_{2}$ driveAxle. $\top$
- "A car has at most two drive axles."
- RangeRover $\sqsubseteq={ }_{1}$ driveAxle.FrontAxle $\sqcap={ }_{1}$ driveAxle.RearAxle
- "A Range Rover has one front axle as drive axle and one rear axle as drive axle".

## Example cardinality restriction

- Car $\sqsubseteq \leq{ }_{2}$ driveAxle. $\top$
- "A car has at most two drive axles."
- RangeRover $\sqsubseteq={ }_{1}$ driveAxle.FrontAxle $\Pi={ }_{1}$ driveAxle.RearAxle
- "A Range Rover has one front axle as drive axle and one rear axle as drive axle".
- Human $\sqsubseteq={ }_{2}$ hasBiologicalParent. $\top$
- "A human has two biological parents."

## Example cardinality restriction

- Car $\sqsubseteq \leq{ }_{2}$ driveAxle. $\top$
- "A car has at most two drive axles."
- RangeRover $\sqsubseteq={ }_{1}$ driveAxle.FrontAxle $\Pi={ }_{1}$ driveAxle.RearAxle
- "A Range Rover has one front axle as drive axle and one rear axle as drive axle".
- Human $\sqsubseteq={ }_{2}$ hasBiologicalParent. $T$
- "A human has two biological parents."
- Mammal $\sqsubseteq={ }_{1}$ hasParent.Female $\Pi={ }_{1}$ hasParent.Male
- "A mammal has one parent that is a female and one parent that is a male."

## Example cardinality restriction

- Car $\sqsubseteq \leq{ }_{2}$ driveAxle. $\top$
- "A car has at most two drive axles."
- RangeRover $\sqsubseteq={ }_{1}$ driveAxle.FrontAxle $\sqcap={ }_{1}$ driveAxle.RearAxle
- "A Range Rover has one front axle as drive axle and one rear axle as drive axle".
- Human $\sqsubseteq={ }_{2}$ hasBiologicalParent. $\top$
- "A human has two biological parents."
- Mammal $\sqsubseteq={ }_{1}$ hasParent.Female $\Pi={ }_{1}$ hasParent.Male
- "A mammal has one parent that is a female and one parent that is a male."
- $\geq_{2}$ owns.Houses $\sqcup \geq_{5}$ own.Car $\sqsubseteq$ Rich
- "Everyone who owns more than two houses or five cars is rich."

## One more value restriction

- Restrictions of the form $\forall R . D, \exists R . D, \leq_{n} R . D, \geq_{n} R . D$ are called qualified when $D$ is not T.
- We can also qualify with a closed class.

## One more value restriction

- Restrictions of the form $\forall R . D, \exists R . D, \leq_{n} R . D, \geq_{n} R . D$ are called qualified when $D$ is not T.
- We can also qualify with a closed class.
- Syntax:
- RDF/OWL: hasValue,
- DL, Manchester: just use: $\{\ldots\}$.

## One more value restriction

- Restrictions of the form $\forall R . D, \exists R . D, \leq_{n} R . D, \geq_{n} R . D$ are called qualified when $D$ is not T.
- We can also qualify with a closed class.
- Syntax:
- RDF/OWL: hasValue,
- DL, Manchester: just use: $\{\ldots\}$.
- Example:
- Bieberette $\equiv$ Girl $\sqcap \exists$ loves. $\{$ J.Bieber\}
- T $\sqsubseteq ~ \exists l o v e s .\{M a r y\}$
- Norwegian $\equiv$ Person $\sqcap \exists$ citizenOf. $\{$ Norway $\}$

## Self restriction

- New construct builder.
- Local reflexivity restriction. Restricts to objects which are related to themselves.
- Syntax:
- DL: $\exists R$.Self
- RDF/OWL: owl:hasSelf,
- Manchester: Self

## Self restriction

- New construct builder.
- Local reflexivity restriction. Restricts to objects which are related to themselves.
- Syntax:
- DL: $\exists R$.Self
- RDF/OWL: owl:hasSelf,
- Manchester: Self
- Semantics:
- $(\exists R . S e l f)^{\mathcal{I}}=\left\{x \in \Delta^{\mathcal{I}} \mid\langle x, x\rangle \in R^{\mathcal{I}}\right\}$

## Self restriction

- New construct builder.
- Local reflexivity restriction. Restricts to objects which are related to themselves.
- Syntax:
- DL: $\exists R$.Self
- RDF/OWL: owl:hasSelf,
- Manchester: Self
- Semantics:
- $(\exists R . \text { Self })^{\mathcal{I}}=\left\{x \in \Delta^{\mathcal{I}} \mid\langle x, x\rangle \in R^{\mathcal{I}}\right\}$
- Examples:
- AutoregulatingProcess $\sqsubseteq \exists$ regulate.Self
- $\exists$ hasBoss.Self $\sqsubseteq$ SelfEmployed

## Outline

(1) Reminder: $\mathcal{A L C}$
(2) Important assumptions
(3) OWL 2

- Axioms and assertions using individuals
- Concept Restrictions
- Modelling 'problems'
- Roles
- Datatypes

## Restrictions, non-unique names and open worlds

Restrictions + the OWA and the NUNA can be tricky, consider:

## TBox:

> Orchestra $\sqsubseteq$ Ensemble
> ChamberEnsemble $\sqsubseteq$ Ensemble
> ChamberEnsemble $\sqsubseteq \leq_{1}$ firstViolin. $\top$

## Restrictions, non-unique names and open worlds

Restrictions + the OWA and the NUNA can be tricky, consider:

## TBox:

> Orchestra $\sqsubseteq$ Ensemble
> ChamberEnsemble $\sqsubseteq$ Ensemble
> ChamberEnsemble $\sqsubseteq \leq_{1}$ firstViolin. $\top$

## ABox:

Ensemble(oslo)
firstViolin(oslo, skolem)

firstViolin(oslo, lie)

## Restrictions, non-unique names and open worlds

Restrictions + the OWA and the NUNA can be tricky, consider:
TBox:

$$
\text { Orchestra } \sqsubseteq \text { Ensemble }
$$

ChamberEnsemble $\sqsubseteq$ Ensemble
ChamberEnsemble $\sqsubseteq \leq_{1}$ firstViolin. $\top$

## ABox:

Ensemble(oslo)
firstViolin(oslo, skolem)
 firstViolin(oslo, lie)

- Orchestras and Chamber ensembles are Ensembles.
- Chamber ensembles have only one instrument on each voice,
- in particular, only one first violin.

## Restrictions, non-unique names and open worlds

Restrictions + the OWA and the NUNA can be tricky, consider:
TBox:

$$
\text { Orchestra } \sqsubseteq \text { Ensemble }
$$

ChamberEnsemble $\sqsubseteq$ Ensemble
ChamberEnsemble $\sqsubseteq \leq_{1}$ firstViolin. $\top$

## ABox:

Ensemble(oslo)
firstViolin(oslo, skolem)
 firstViolin(oslo, lie)

- Orchestras and Chamber ensembles are Ensembles.
- Chamber ensembles have only one instrument on each voice,
- in particular, only one first violin.
- oslo has two first violins; is oslo an Orchestra?

## Unexpected (non-)results

It does not follow from TBox + ABox that oslo is an Orchestra:

- An ensemble need neither be an orchestra nor a chamber ensemble, its "just" an ensemble.
- Add "covering axiom" Ensemble $\sqsubseteq$ Orchestra $\sqcup$ ChamberEnsemble:
- An ensemble is an orchestra or a chamber ensemble.

## Unexpected (non-)results

It does not follow from TBox + ABox that oslo is an Orchestra:

- An ensemble need neither be an orchestra nor a chamber ensemble, its "just" an ensemble.
- Add "covering axiom" Ensemble $\sqsubseteq$ Orchestra $\sqcup$ ChamberEnsemble:
- An ensemble is an orchestra or a chamber ensemble.

It still does not follow that oslo is an Orchestra:

- This is due to the NUNA.
- We cannot assume that skolem and lie are distinct.
- The statement skolem owl:differentFrom lie, i.e., skolem $\neq$ lie, makes oslo an orchestra.

## Unexpected (non-)results

It does not follow from TBox + ABox that oslo is an Orchestra:

- An ensemble need neither be an orchestra nor a chamber ensemble, its "just" an ensemble.
- Add "covering axiom" Ensemble $\sqsubseteq$ Orchestra $\sqcup$ ChamberEnsemble:
- An ensemble is an orchestra or a chamber ensemble.

It still does not follow that oslo is an Orchestra:

- This is due to the NUNA.
- We cannot assume that skolem and lie are distinct.
- The statement skolem owl:differentFrom lie, i.e., skolem $\neq$ lie, makes oslo an orchestra.
If we remove firstViolin(oslo, lie), is oslo a ChamberEnsemble?

## Unexpected (non-)results

It does not follow from TBox + ABox that oslo is an Orchestra:

- An ensemble need neither be an orchestra nor a chamber ensemble, its "just" an ensemble.
- Add "covering axiom" Ensemble $\sqsubseteq$ Orchestra $\sqcup$ ChamberEnsemble:
- An ensemble is an orchestra or a chamber ensemble.

It still does not follow that oslo is an Orchestra:

- This is due to the NUNA.
- We cannot assume that skolem and lie are distinct.
- The statement skolem owl:differentFrom lie, i.e., skolem $\neq$ lie, makes oslo an orchestra.
If we remove firstViolin(oslo, lie), is oslo a ChamberEnsemble?
- it does not follow that oslo is a ChamberEnsemble.
- This is due to the OWA:
- oslo may have other first violinists.

## Protégé demo of previous slide

- Make class Ensemble.
- Make subclass Orchestra.
- Make subclass ChamberEnsemble.
- Make object property firstViolin.
- Make firstViolin max 1 superclass of ChamberEnsemble.
- Make an Ensemble oslo
- Make a Thing skolem
- Make a Thing lie
- Add firstViolin skolem to oslo
- Add firstViolin lie to oslo
- Classify! Nothing happens.
- Add covering axiom: Orchestra or ChamberEnsemble superclass of Ensemble.
- Classify! Nothing happens.
- skolem is different from lie
- Classify! Bingo! oslo is an Orchestra!

- Semantics:
- $U^{\mathcal{I}}=\Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}}$
- $\mathcal{D}^{\mathcal{I}}=\Delta^{\mathcal{I}} \times \Lambda$

## New roles

- The universal role, and the empty role-for both object roles and data roles.
- Syntax:
- (DL: $U$ (universal object role), $D$ (universal data value role))
- RDF/OWL, Manchester: owl:topObjectProperty, owl:topDataProperty, owl:bottomObjectProperty, owl:bottomDataProperty
- Semantics:
- $U^{\mathcal{I}}=\Delta^{\mathcal{I}} \times \Delta^{\mathcal{I}}$
- $\mathcal{D}^{\mathcal{I}}=\Delta^{\mathcal{I}} \times \Lambda$
- Reads:
- all pairs of individuals are connected by owl:topObjectProperty,
- no individuals are connected by owl:bottomObjectProperty.
- all possible individuals are connected with all literals by owl:topDataProperty,
- no individual is connected by owl:bottomDataProperty to a literal.

## Corresponding mathematical properties and operations

If $R$ and $S$ are binary relations on $X$ then

- $\left(R^{-}\right)^{\mathcal{I}}=\left\{\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle \mid\left\langle b^{\mathcal{I}}, a^{\mathcal{I}}\right\rangle \in R^{\mathcal{I}}\right\}$

## Corresponding mathematical properties and operations

If $R$ and $S$ are binary relations on $X$ then

- $\left(R^{-}\right)^{\mathcal{I}}=\left\{\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle \mid\left\langle b^{\mathcal{I}}, a^{\mathcal{I}}\right\rangle \in R^{\mathcal{I}}\right\}$
- $(R \circ S)^{\mathcal{I}}=\left\{\left\langle a^{\mathcal{I}}, c^{\mathcal{I}}\right\rangle \mid\left\langle a^{\mathcal{I}}, b^{\mathcal{I}}\right\rangle \in R^{\mathcal{I}},\left\langle b^{\mathcal{I}}, c^{\mathcal{I}}\right\rangle \in S^{\mathcal{I}}\right\}$

## Role chaining and inverses illustrated

Role chaining and inverses illustrated

Role chaining and inverses illustrated

Role chaining and inverses illustrated

## Common properties of roles

A relation $R$ over a set $X(R \subseteq X \times X)$ is
Reflexive:

$$
\text { if }\langle a, a\rangle \in R \text { for all } a \in X
$$

$$
(X \sqsubseteq \exists R . S e l f)
$$

## Common properties of roles

A relation $R$ over a set $X(R \subseteq X \times X)$ is

Reflexive:
Irreflexive:
if $\langle a, a\rangle \in R$ for all $a \in X$
if $\langle a, a\rangle \notin R$ for all $a \in X$

$$
\begin{aligned}
& (X \sqsubseteq \exists R . \text { Self }) \\
& (X \sqsubseteq \neg \exists R . S e l f)
\end{aligned}
$$

## Common properties of roles

A relation $R$ over a set $X(R \subseteq X \times X)$ is
Reflexive:
Irreflexive:
Symmetric:

$$
\begin{array}{ll}
\text { if }\langle a, a\rangle \in R \text { for all } a \in X & (X \sqsubseteq \exists R \text {.Self }) \\
\text { if }\langle a, a\rangle \notin R \text { for all } a \in X & (X \sqsubseteq \neg \exists R \text {.Self }) \\
\text { if }\langle a, b\rangle \in R \text { implies }\langle b, a\rangle \in R & \left(R^{-} \sqsubseteq R\right)
\end{array}
$$

## Common properties of roles

A relation $R$ over a set $X(R \subseteq X \times X)$ is
Reflexive:
Irreflexive:
Symmetric:
Asymmetric:
if $\langle a, a\rangle \in R$ for all $a \in X$
( $X \sqsubseteq \exists$ R.Self )
if $\langle a, a\rangle \notin R$ for all $a \in X$
if $\langle a, b\rangle \in R$ implies $\langle b, a\rangle \in R$
if $\langle a, b\rangle \in R$ implies $\langle b, a\rangle \notin R$
( $X \sqsubseteq \neg \exists R$.Self)
( $R^{-} \sqsubseteq R$ )
$\left(R^{-} \sqsubseteq \neg R\right)$

## Common properties of roles

A relation $R$ over a set $X(R \subseteq X \times X)$ is

```
Reflexive:
Irreflexive:
Symmetric:
Asymmetric:
Transitive:
\[
\begin{array}{ll}
\text { if }\langle a, a\rangle \in R \text { for all } a \in X & (X \sqsubseteq \exists R \text {.Self }) \\
\text { if }\langle a, a\rangle \notin R \text { for all } a \in X & (X \sqsubseteq \neg \exists R \text {.Self }) \\
\text { if }\langle a, b\rangle \in R \text { implies }\langle b, a\rangle \in R & \left(R^{-} \sqsubseteq R\right) \\
\text { if }\langle a, b\rangle \in R \text { implies }\langle b, a\rangle \notin R & \left(R^{-} \sqsubseteq \neg R\right) \\
\text { if }\langle a, b\rangle,\langle b, c\rangle \in R \text { implies }\langle a, c\rangle \in R & (R \circ R \sqsubseteq R)
\end{array}
\]
```

## Common properties of roles

A relation $R$ over a set $X(R \subseteq X \times X)$ is

```
Reflexive:
Irreflexive:
Symmetric:
Asymmetric:
Transitive:
Functional:
\[
\begin{array}{ll}
\text { if }\langle a, a\rangle \in R \text { for all } a \in X & (X \sqsubseteq \exists R \text {. Self }) \\
\text { if }\langle a, a\rangle \notin R \text { for all } a \in X & (X \sqsubseteq \neg \exists R \text {.Self }) \\
\text { if }\langle a, b\rangle \in R \text { implies }\langle b, a\rangle \in R & \left(R^{-} \sqsubseteq R\right) \\
\text { if }\langle a, b\rangle \in R \text { implies }\langle b, a\rangle \notin R & \left(R^{-} \sqsubseteq \neg R\right) \\
\text { if }\langle a, b\rangle,\langle b, c\rangle \in R \text { implies }\langle a, c\rangle \in R & (R \circ R \sqsubseteq R) \\
\text { if }\langle a, b\rangle,\langle a, c\rangle \in R \text { implies } b=c & (\top \sqsubseteq \leq 1 R \text {.丁) }
\end{array}
\]
```

## Common properties of roles

A relation $R$ over a set $X(R \subseteq X \times X)$ is
Reflexive: $\quad$ if $\langle a, a\rangle \in R$ for all $a \in X \quad(X \sqsubseteq \exists R$. Self $)$
Irreflexive: $\quad$ if $\langle a, a\rangle \notin R$ for all $a \in X$
( $X \sqsubseteq \neg \exists$ R.Self )
Symmetric:
Asymmetric:
Transitive:
Functional:
if $\langle a, b\rangle \in R$ implies $\langle b, a\rangle \in R$
( $R^{-} \sqsubseteq R$ )
if $\langle a, b\rangle \in R$ implies $\langle b, a\rangle \notin R$
$\left(R^{-} \sqsubseteq \neg R\right)$
if $\langle a, b\rangle,\langle b, c\rangle \in R$ implies $\langle a, c\rangle \in R$
$(R \circ R \sqsubseteq R)$
if $\langle a, b\rangle,\langle a, c\rangle \in R$ implies $b=c$
( $\left.\top \sqsubseteq \leq_{1} R . \top\right)$
Inverse functional:
if $\langle a, b\rangle,\langle c, b\rangle \in R$ implies $a=c$
$\left(T \sqsubseteq \leq_{1} R^{-} . T\right)$

## Properties in OWL

Remember: three kinds of mutually disjoint properties in OWL:
(1) owl:DatatypeProperty

- link individuals to data values, e.g., xsd:string.
- Examples: :hasAge, :hasSurname.
(2) owl:ObjectProperty
- link individuals to individuals.
- Example: :hasFather, :driveAxle.
(3) owl:AnnotationProperty
- has no logical implication, ignored by reasoners.
- Examples: rdfs:label, dc:creator.

## Characteristics of OWL properties

- Object properties link individuals to individuals, so all characteristics and operations are defined for them.

## Characteristics of OWL properties

- Object properties link individuals to individuals, so all characteristics and operations are defined for them.
- Datatype properties link individuals to data values, so they cannot be
- reflexive-or they would not be datatype properties,

## Characteristics of OWL properties

- Object properties link individuals to individuals, so all characteristics and operations are defined for them.
- Datatype properties link individuals to data values, so they cannot be
- reflexive-or they would not be datatype properties,
- transitive-since no property takes data values in 1. position,

## Characteristics of OWL properties

- Object properties link individuals to individuals, so all characteristics and operations are defined for them.
- Datatype properties link individuals to data values, so they cannot be
- reflexive-or they would not be datatype properties,
- transitive-since no property takes data values in 1. position,
- symmetric-as above,

## Characteristics of OWL properties

- Object properties link individuals to individuals, so all characteristics and operations are defined for them.
- Datatype properties link individuals to data values, so they cannot be
- reflexive-or they would not be datatype properties,
- transitive-since no property takes data values in 1. position,
- symmetric—as above,
- inverses-as above,

## Characteristics of OWL properties

- Object properties link individuals to individuals, so all characteristics and operations are defined for them.
- Datatype properties link individuals to data values, so they cannot be
- reflexive-or they would not be datatype properties,
- transitive-since no property takes data values in 1. position,
- symmetric—as above,
- inverses-as above,
- inverse functional-for computational reasons,

## Characteristics of OWL properties

- hasAncestor ○ hasAncestor $\sqsubseteq ~ h a s A n c e s t o r ~$
- hasParent $\circ$ hasBrother $\sqsubseteq$ hasUncle

## Quirks

Role modelling in OWL 2 can get excessively complicated.

- For instance:
- transitive roles cannot be irreflexive or asymmetric,

## Quirks

Role modelling in OWL 2 can get excessively complicated.

- For instance:
- transitive roles cannot be irreflexive or asymmetric,
- role inclusions are not allowed to cycle, i.e. not
hasParent $\circ$ hasHusband $\sqsubseteq$ hasFather hasFather $\sqsubseteq$ hasParent.

## Quirks

Role modelling in OWL 2 can get excessively complicated.

- For instance:
- transitive roles cannot be irreflexive or asymmetric,
- role inclusions are not allowed to cycle, i.e. not
hasParent $\circ$ hasHusband $\sqsubseteq$ hasFather
hasFather $\sqsubseteq$ hasParent.
- transitive roles $R$ and $S$ cannot be declared disjoint

## Quirks

Role modelling in OWL 2 can get excessively complicated.

- For instance:
- transitive roles cannot be irreflexive or asymmetric,
- role inclusions are not allowed to cycle, i.e. not
hasParent $\circ$ hasHusband $\sqsubseteq$ hasFather
hasFather $\sqsubseteq$ hasParent.
- transitive roles $R$ and $S$ cannot be declared disjoint
- Note:
- these restrictions can be hard to keep track of
- the reason they exist are computational, not logical

## Quirks

Role modelling in OWL 2 can get excessively complicated.

- For instance:
- transitive roles cannot be irreflexive or asymmetric,
- role inclusions are not allowed to cycle, i.e. not
hasParent $\circ$ hasHusband $\sqsubseteq$ hasFather
hasFather $\sqsubseteq$ hasParent.
- transitive roles $R$ and $S$ cannot be declared disjoint
- Note:
- these restrictions can be hard to keep track of
- the reason they exist are computational, not logical
- Fortunately:
- There are also simple patterns
- that are quite useful.

## Outline

(1) Reminder: $\mathcal{A L C}$
(2) Important assumptions
(3) OWL 2

- Axioms and assertions using individuals
- Concept Restrictions
- Modelling 'problems'
- Roles
- Datatypes

## Creating datatypes

- Many predefined datatypes are available in OWL:
- all common XSD datatypes: xsd:string, xsd:int, ...
- a few from RDF: rdf:PlainLiteral,
- and a few of their own: owl:real and owl:rational.

## Creating datatypes

- Many predefined datatypes are available in OWL:
- all common XSD datatypes: xsd:string, xsd:int, ...
- a few from RDF: rdf:PlainLiteral,
- and a few of their own: owl:real and owl:rational.
- New datatypes can be defined by boolean operations: $\neg, \sqcap, \sqcup$ :
- owl:datatypeComplementOf, owl:intersectionOf, owl:unionOf.

## Creating datatypes

- Many predefined datatypes are available in OWL:
- all common XSD datatypes: xsd:string, xsd:int, ...
- a few from RDF: rdf:PlainLiteral,
- and a few of their own: owl:real and owl:rational.
- New datatypes can be defined by boolean operations: $\neg, \sqcap, \sqcup$ :
- owl:datatypeComplementOf, owl:intersectionOf, owl:unionOf.
- Datatypes may be restricted with constraining facets, borrowed from XML Schema.
- For numeric datatypes: xsd:minInclusive, xsd:maxInclusive
- For string datatypes: xsd:minLenght, xsd:maxLenght, xsd:pattern.

## Creating datatypes

- Many predefined datatypes are available in OWL:
- all common XSD datatypes: xsd:string, xsd:int, ...
- a few from RDF: rdf:PlainLiteral,
- and a few of their own: owl:real and owl:rational.
- New datatypes can be defined by boolean operations: $\neg, \sqcap, \sqcup$ :
- owl:datatypeComplementOf, owl:intersectionOf, owl:unionOf.
- Datatypes may be restricted with constraining facets, borrowed from XML Schema.
- For numeric datatypes: xsd:minInclusive, xsd:maxInclusive
- For string datatypes: xsd:minLenght, xsd:maxLenght, xsd:pattern.
- Example:
- Teenager is equivalent to: (Manchester)

Person and (age some positiveInteger[>= 13, <= 19])

- "A teenager is a person of age 13 to 19 ."

## Modelling patterns

So, what can we say now?
$\checkmark$ A person has a mother.
$\checkmark$ A penguin eats only fish. A horse eats only chocolate.
$\checkmark$ A nuclear family has two parents, at least two children and a dog.
