**Desenho de *primers* para amplificação do gene 16S rRNA de *Staphylococcus aureus***

1. Obtenção da sequência do gene 16S rRNA da bactéria *Staphylococcus aureus* no formato FASTA:

***Staphylococcus aureus* strain ATCC 12600 16S ribosomal RNA, complete sequence**

NCBI Reference Sequence: NR\_118997.2

[GenBank](#) [Graphics](#)

```
>NR_118997.2 Staphylococcus aureus strain ATCC 12600 16S ribosomal RNA, complete sequence

2. Desenho dos *primers* para a sequência apresentada utilizando o *software*

Primer 3:

**PFA:** primer foward

**PRA:** primer reverse

```

OLIGO      start  len   tm   gc%  any   3' seq
LEFT PRIMER    503   20  59.90  55.00  6.00  2.00 GAAAGCCACGGCTAATACG
RIGHT PRIMER   705   20  59.99  50.00  4.00  2.00 CATTTCACCGCTACACATGG
SEQUENCE SIZE: 1552
INCLUDED REGION SIZE: 1552

```

3. Verificação de homologia entre os *primers* obtidos pelo Primer 3 com o primer universal pelo software Primer Show:

**PFU (primer foward universal):** AGAGTTGATCCTGGCTCAG

**PRU(primer reverse universal):** ACGGCTACCTTGTACGACTT

#### The Sequence Manipulation Suite: Primer Show

Results for 1552 residue sequence "mRNA /gene="fem-2" (exons in uppercase)" starting "TTTATGGAGA".

#### 4. Tamanho do amplicon

Sabendo-se que a sequência de estudo possui 1552 bp, calcula-se o tamanho do amplicon da seguinte forma:

**Tamanho entre PFU e PRU (1522-8):** 1514 bp

**Tamanho entre PFA e PRA:** 123 bp

#### 5. Cálculo da temperatura de Melting e de annealing para amplificação da sequência de interesse:

a) Cálculo pelo site NEB Tm calculator utilizando a enzima Q5

High-Fidelity DNA Polymerase:

Forward primer universal (5'-AGAGTTGATCCTGGCTCAG-3'): 64°C

Reverse primer universal (5'-ACGGCTACCTTGTACGACTT-3'): 66°C

Temperatura de anelamento: 65°C

Forward primer *S. aureus* (5'-GAAAGCCACGGCTAACTACG-3'): 66°C

Reverse primer *S. aureus* (5'-CATTTCACCGCTACACATGG-3'): 64°C

Temperatura de anelamento: 65°C

b) Cálculo manual:

Forward primer universal (5'-AGAGTTGATCCTGGCTCAG-3'): 60°C

Reverse primer universal (5'-ACGGCTACCTTGTACGACTT-3'): 62°C

Forward primer *S. aureus* (5'-GAAAGCCACGGCTAACTACG-3'): 62°C

Reverse primer *S. aureus* (5'-CATTTCACCGCTACACATGG-3'): 60°C
