NGS (Next Generation Sequencing)

iSeq 100 System

MiniSeq System

MiSeq Series +

NextSeq Series +

Run Time	9–17.5 hours	4–24 hours	4–55 hours	12–30 hours
Maximum Output	1.2 Gb	7.5 Gb	15 Gb	120 Gb
Maximum Reads Per Run	4 million	25 million	25 million [†]	400 million
Maximum Read Length	2 × 150 bp	2 × 150 bp	2 × 300 bp	2 × 150 bp

What would you do if you could sequence everything?

A map of diversity in the human microbiome

Streptococcus dominates the oral cavity with *S. mitis* > 75% in the **cheek**

Propionibacterium acnes lives on the skin and **nose** of most people

Many *Corynebacterium* species characterize different body sites:
C. matruchoti the **plaque**
C. accolens the **nose**
C. croppenstedtii the **skin**

Lactobacillus species (*L. gasseri*, *L. jensenii*, *L. crispatus*, *L. iners*) are predominant but mutually exclusive in the **vagina**

Staphylococcus epidermidis colonizes external body sites

○ Commensal microbes
★ Potential pathogens

The four most abundant phyla

- Actinobacteria
- Bacteroidetes
- Firmicutes
- Proteobacteria

Low abundance phyla

- Chloroflexi
- Cyanobacteria
- Euryarchaeota
- Fusobacteria
- Lentisphaerae
- Spirochaetes
- Synergistetes
- Tenericutes
- Thermi
- Verrucomicrobia

National Institutes of Health
Human Microbiome Project

N. Segata & C. Huttenhower
<http://huttenhower.sph.harvard.edu>
(generated using Cytoscape and mTSA400 from MetaPhlAn analysis)

Several *Prevotella* species are present in the gastrointestinal tract. *P. copri* is present in 19% of the subjects and dominates the **intestinal** flora when present

Microscopy from <http://bacmap.wihartlab.com>

Bacteroides is the most abundant genus in the **gut** of almost all healthy subjects

Campylobacter includes opportunistic pathogens, but members live in the oral cavities of most healthy people in the cohort

E. coli is present in the **gut** of the majority of healthy subjects but at very low abundance

Frederick Sanger
1977

Figura 8.5 Estrutura de um dideoxinucleotídeo: 2', 3'-dideoxi CTP (ddCTP). O grupo hidroxila ancorado ao carbono 3' em nucleotídeos normais é trocado por um átomo de hidrogênio (sombreado).

Biologia Computacional

Biologia de Sistemas Moleculares

Protocols:

DNA

- Whole Genome-Seq
- Exome-Seq
- Metagenomics
- 16S Ribosomal diversity

Structural and genomic
alterations/mutation

Epigenomics

- Chip-Seq
- Methyl-Seq

Regulation of Gene Expression

RNA

- mRNA-Seq
- miRNA-Seq

Expression of Genes
(canonical and non-canonical)

Análise de dados em escala genômica

Next Generation Sequencing

1. Definição do problema biológico;

2. Discussão do desenho experimental;
- Tipo de amostra, número amostral, abordagem de NGS, etc.

4. Discussão dos resultados;

5. Conclusão do estudo.

view sequences

The February 2009 human reference sequence (GRCh37) was produced by the [Genome Reference Consortium](#). For more information about this assembly, see [GRCh37](#) in the NCBI Assembly database.

Sample position queries

A genome position can be specified by the accession number of a sequenced genomic clone, an mRNA or EST or STS marker, a chromosomal coordinate range, or keywords from the GenBank description of an mRNA. The following list shows examples of valid position queries for the human genome. See the [User's Guide](#) for more information.

Request:	Genome Browser Response:
chr7	Displays all of chromosome 7
chrUn_gl000212	Displays all of the unplaced contig gl000212
20p13	Displays region for band p13 on chr 20
chr3:1-1000000	Displays first million bases of chr 3, counting from p-arm telomere
chr3:1000000+2000	Displays a region of chr3 that spans 2000 bases, starting with position 1000000
RH18061;RH80175	Displays region between genome landmarks, such as the STS markers RH18061 and RH80175, or
15q11;15q13	chromosome bands 15q11 to 15q13, or SNPs rs1042522 and rs1800370. This syntax may also be used
rs1042522;rs1800370	for other range queries, such as between uniquely determined ESTs, mRNAs, refSeqs, etc.
D16S3046	Displays region around STS marker D16S3046 from the Genethon/Marshfield maps. Includes 100,000 bases on each side as well.
AA205474	Displays region of EST with GenBank accession AA205474 in BRCA1 cancer gene on chr 17
AC008101	Displays region of clone with GenBank accession AC008101
AF083811	Displays region of mRNA with GenBank accession number AF083811
PRNP	Displays region of genome with HUGO Gene Nomenclature Committee identifier PRNP
NM_017414	Displays the region of genome with RefSeq identifier NM_017414
NP_059110	Displays the region of genome with protein accession number NP_059110
pseudogene mRNA	Lists transcribed pseudogenes, but not cDNAs
homeobox caudal	Lists mRNAs for caudal homeobox genes
zinc finger	Lists many zinc finger mRNAs
kruppel zinc finger	Lists only kruppel-like zinc fingers
huntington	Lists candidate genes associated with Huntington's disease
zahler	Lists mRNAs deposited by scientist named Zahler
Evans,J.E.	Lists mRNAs deposited by co-author J.E. Evans

Use this last format for author queries. Although GenBank requires the search format *Evans JE*, internally it uses the format *Evans,J.E.*

NGS (Next Generation Sequencing)

Etapas:

1. Extração do DNA ou RNA
2. Preparo da biblioteca (fragmentação randômica)
3. Sequenciamento da biblioteca
4. Análise dos dados (Bioinformática)

Extração do DNA ou RNA

1. Extração do DNA ou RNA

- Manual ou automatizada
- Qualidade (pureza e integridade)

Pureza: Contaminação com RNA/proteínas

OD 260nm /280nm Razão = 1,8 – 2,0

Amostras com razão acima de 2,0 tem muito RNA

Amostras com razão abaixo de 1,8 tem contaminação com proteína

Contaminação com reagentes

OD 260nm /230nm Razão = 2,0 – 2,2

Amostras com razão abaixo do esperado tem contaminação reagentes

Integridade: Fragmentação do DNA ou RNA

Quantificação do DNA ou RNA

Fator de conversão: Uma absorção de **1,0 a 260** nm corresponde a uma concentração de 50 ng/μL (50 μg/mL) para dsDNA puro.

Obs: Os valores de absorção devem estar dentro da faixa linear do espectrofotômetro.

Método:

1. Diluir uma fração de 10 μL de DNA purificado tratado com RNase em 90 μL de TE (diluição 1/10) (Fator de Diluição).
2. Medir a absorção em 320 nm, 280 nm e 260 nm.
3. Calcular os valores corrigidos de A280 e A260 subtraindo a absorção em 320 nm (A320) dos valores de A280 e A260.
4. Concentração do DNA em ng/μL = A260 corrigido × 10 (**fator de diluição**) × 50 (**fator de conversão**).
5. Razão A260/A280: dividir A260 corrigido por A280 corrigido.

NGS (Next Generation Sequencing)

2. Preparo da biblioteca (fragmentação randômica)

**Mecânica ou
enzimática**

**Tagmentação
(Transposase)**

Target DNA is Simultaneously
Fragmented and Tagged

3. Sequenciamento da biblioteca

NGS (Next Generation Sequencing)

4. Análise dos dados (Bioinformática)

Parâmetros importantes

Cobertura!!!

Parâmetros importantes

Cobertura!!!

Parâmetros importantes

The Lander/Waterman equation

Equação Geral: $C = LN/G$

C: cobertura

L: tamanho da read (sequência)

N: número de reads

G: tamanho do genoma haploide

$$C = (100 \text{ bp}) * (189 \times 10^6) / (3 \times 10^9 \text{ bp}) = 6.3$$

iSeq 100 System

MiniSeq System

MiSeq Series

NextSeq Series

Run Time	9–17.5 hours	4–24 hours	4–55 hours	12–30 hours
Maximum Output	1.2 Gb	7.5 Gb	15 Gb	120 Gb

Maximum Read Length	2 × 150 bp	2 × 150 bp	2 × 300 bp	2 × 150 bp

*Com base na equação de Lander e Waterman ($C=LN/G$), qual seria a cobertura de 10 exomas sequenciados na plataforma NextSeq com tamanho de “reads” (sequencias) de **150** nucleotídeos?*

Informações adicionais:

- 1. Os exomas serão sequenciados na plataforma NextSeq, que tem capacidade de gerar **120 Gb** de dados.*
- 2. Um exoma humano tem o tamanho de 46 Mb.*

*Com base na equação de Lander e Waterman ($C=LN/G$), e considerando uma cobertura do genoma completo de **30x**, quantas amostras podem ser sequenciadas numa corrida com tamanho de “reads” (sequencias) de **300** nucleotídeos?*

Informações adicionais:

- 1. Os genomas serão sequenciados na plataforma NextSeq, que tem capacidade de gerar **120 Gb** de dados.*
- 2. Um genoma humano tem o tamanho de 3 Gb.*
