

**Tópicos Especiais em Hidráulica e Saneamento:
Sensores e Novas Tecnologias para a Melhoria da Qualidade de Água com
Monitoramento em Tempo Real**

SHS5964

Prof. Dr. Filippo Ghiglieno

filippo.ghiglieno@df.ufscar.br

(DF/UFSCar)

Topics

1st day:

- the sensors, the signals and the detection systems;
- the sensor classification;
- the unit of measurements;
- the transfer functions (mathematical models, calibration, computational of a stimulus);
- the sensor characteristics (span, accuracy, calibration error, nonlinearity, saturation, repeatability, resolution, uncertainty, output format, environmental factors).

2nd day:

- the physical principles of sensing (electrical charges and fields, capacitance, magnetism, induction, resistance, piezoelectric effect, hall effect, electro-optical effect, thermoelectric effects, sound waves, temperature and thermal properties of materials, heat transfer).

3rd day:

- the optical components of sensors (light, polarization, radiometry, photometry, windows, prisms, mirrors, lenses, fiber optics and waveguides);
- the interface electronic circuits (signal conditioners, sensor connections, excitation circuits, analog to digital converters, data transmission, noise in sensors and circuits, batteries for low power sensors).

4th day: case study: turbidity with a smartphone camera.

5th day: case study: digital holography and particle detection in water with a low cost real time test bench.
