

APPENDIX C. NUCLEAR SPECTROSCOPY STANDARDS

1. Gamma-ray Energy and Intensity Standards

Table 1 lists some γ -ray energy standards, from the evaluation of Helmer *et al.*¹, and intensity standards, recommended by the IAEA Co-ordinated Research Programme^{2,3} (CRP), for calibration of γ -ray measurements. Most of the isotopes given here have half-lives of more than 30 days, and many are commercially available. The γ -ray energies are based on the *gold standard*, the 411.80205 17 keV transition from ^{198}Au decay. Uncertainties are intended to represent one standard deviation, and include the 0.3 ppm uncertainty in the definition of the electron volt relative to wavelength. The γ -ray energies reported in Table 1 are from absolute wavelength or curved-crystal spectrometer measurements, which are tied directly to the *gold standard*, and from the measurements of small γ -ray energy differences using Ge detectors. Energies that are rounded to the nearest 0.1-keV and tabulated without uncertainty are not recommended values; however, they have been included because these transitions are useful intensity calibration standards. Other, apparently precise, transition energies and intensities have been tabulated in the *Table of Isotopes*, but the reader should use these values with great caution because of unknown systematic uncertainties which may not have been included. Columns 1 and 2 show the isotope names and half-lives from the *Table of Isotopes*, respectively. Columns 3 and 4 list the γ -ray energies and intensities with their corresponding uncertainties (in italics) in the least significant digit(s).

¹ R.G. Helmer and C. van der Leun, private communication, draft of a paper to be submitted to *Nucl. Instr. Meth.*, 1999.

² *X-ray and Gamma-ray Standards for Detector Calibration*, report by the Co-ordinated Research IAEA Programme, IAEA-TECDOC-619 (1991).

³ R. Vaninbroukx, *Emission Probabilities of Selected Gamma Rays for Radionuclides Used as Detector-Calibration Standards*, report presented at the Advisory Group Meeting of the International Atomic Energy Agency (IAEA), Vienna (1985).
