100 ANOS

## DEPARTMENTS

**LAN- Agroindústria  
Alimentos e Nutrição**

**LCE- Ciências Exatas**

**LEB- Engenharia de  
Biossistemas**

**LGN- Genética**

**LSO – Ciência do Solo**

**LCF- Ciências Florestais**

**LEA- Entomologia  
e Acarologia**

**LPV- Produção Vegetal**

**LCB- Ciências Biológicas**

**LES- Economia  
Administração e Sociologia**

**LFN- Fitopatologia e  
Nematologia**

**LZT- Zootecnia**

# **DEPARTMENT OF PLANT PATHOLOGY & NEMATOLOGY**

Prof. Dr. Luís Eduardo A.  
Camargo  
Department Head

Prof. Dr. Jorge A. M. Rezende  
Department Vice-Head

[Fitopatologia](#)[Orientadores](#)[Disciplinas](#)[Pós-Doutorado](#)[Legislação](#)[Processo seletivo](#)[Contato](#)Biblioteca digital  
do programa

### Cursos oferecidos

Mestrado e Doutorado

### Avaliação pela CAPES

Triênio 2010/2011/2012 - conceito "7"

### Linhas de pesquisa

- Biologia celular e molecular das interações planta-patógeno
- Controle de doenças de plantas
- Epidemiologia de doenças de plantas
- Fitopatógenos: identificação, variabilidade e mecanismos de patogenicidade
- Resistência de plantas a patógenos

### PÓS-GRADUAÇÃO

# GRADUATE COURSE ON PLANT PATHOLOGY\*

February 2016:

Ph.D. Students – 25

M.Sc. Students - 17

Ph.D. thesis (1970) – 191

Master dissertation (1964) - 310

Grade 7 – Last CAPES (Ministry  
of Education) triennial  
evaluation

(Maximum grade is 7)

# LABORATORY OF MYCOLOGY

Prof. Nelson S. Massola Jr.

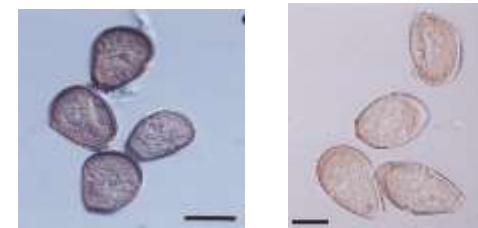

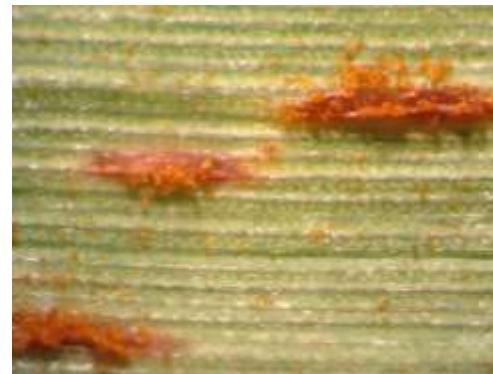

Research on plant pathogenic fungi

*Colletotrichum* spp. (chiefly)

Characterization  
Identification  
Variability

Sugarcane rusts

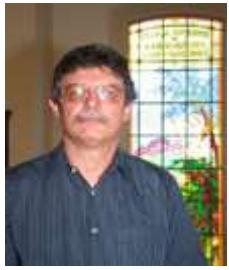

Spores preservation  
Varietal reaction

Citrus gummosis

Varietal reaction  
Zoospores attraction

# LABORATORY OF PLANT VIROLOGY

Prof. Jorge A. M. Rezende

**Diagnose of plant virus diseases:**

Biological, serological , TEM & molecular assays

Potyvirus particles

**Passion fruit woodiness - disease management:**

Transgenic plants, cultural practices (roguing),  
cross protection.

Mosaic on passionflower

**Virus-vector relationship:**

*Zucchini lethal chlorosis virus – Frankliniella zucchini*  
*Begomovirus & Crinivirus – Bemisia tabaci*

Tomato infected  
by crinivirus

# LABORATORY OF PHYTOPLASMAS

Prof. Ivan P. Bedendo

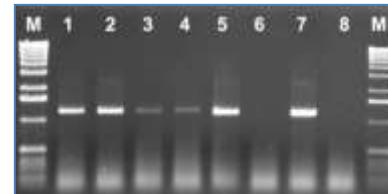

-Disease diagnosis in  
cultivated species

- Molecular detection and identification

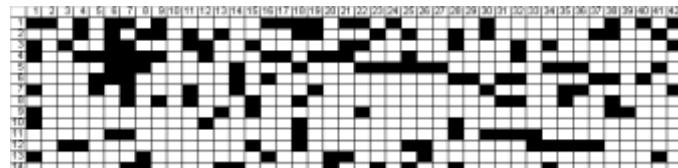

Characterization of the genetic diversity

- Identification of potential insect vectors

- Epidemiological analyses

# LABORATORY OF NEMATOLOGY

Prof. Mario M. Inomoto

Cultural practices for disease management:  
crop rotation & gramineous cover crops

Seed treatment for disease management

Screening of coffee resistance to *Pratylenchus jaehni*  
and *Meloidogyne incognita*

Carrots before crop rotation

Carrots after crop rotation

# LABORATORY OF PLANT BACTERIOLOGY

Prof. José Belasque Junior

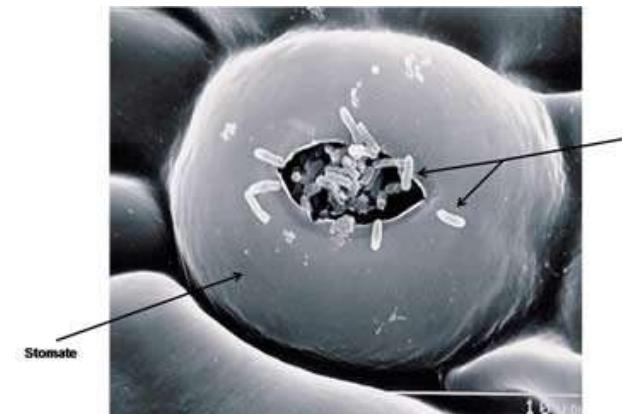

Research on plant pathogenic bacteria

<http://www.fundecitrus.com.br/doencas/cancro/7>

- Epidemiology and control

Citrus canker  
HLB citrus

The bacterium *Xanthomonas axonopodis* pv. *citri* exuding from a stomate (pl. stomata) five days after infection on a citrus leaf. A stomate is a pore, mainly found on the underside of a leaf, used for gas exchange.

<http://www.crec.ifas.ufl.edu/extension/canker/pathogen.shtml>

# SEED PATHOLOGY

Prof. José O M. Menten & Dr. Maria Heloisa Morais

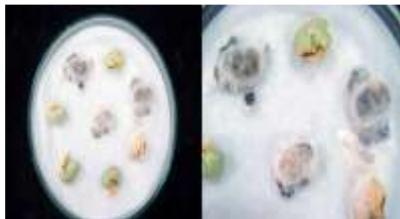

Detection of seed-borne pathogens: methods, incidence, and transmission

Effects of seed-borne fungi on seed physiology

Chemical seed treatment to control seed-borne and soil-borne pathogens

Seed treatment with *Trichoderma* spp. to control *Sclerotinia sclerotiorum*

Methods to detect  
*Sclerotinia sclerotiorum*

Chemical treatment for  
corn seeds

Seed treatment to control  
*Rhizoctonia solani* on soil

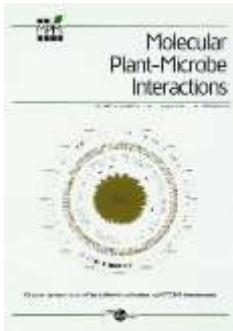

# LABORATORY OF MOLECULAR GENETICS

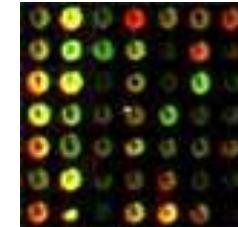

Prof. Luis E. A. Camargo

- Genetics of host-pathogen interactions

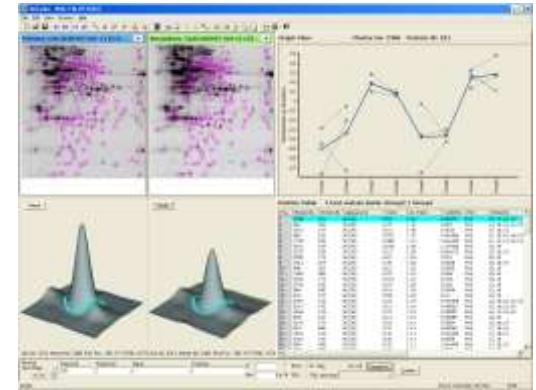

- Proteomic and transcriptomic responses of sugarcane plants

- Functional genomics of plant associated bacteria

- Identification of disease resistance genes

- Development of molecular markers applied to breeding

# PLANT DISEASE EPIDEMIOLOGY

Prof. Armando Bergamin Filho  
Prof. Lilian Amorim

## THEORETICAL EPIDEMIOLOGY

Temporal Dynamics of Epidemics

Spatial Distribution of Diseased Plants

Citrus Canker:  
new eradication  
law (1999)

## APPLIED EPIDEMIOLOGY: disease management

Citrus: HLB, Sudden Death, CVC, Canker, Black Spot

Tomato: Begomovirus, Crinivirus

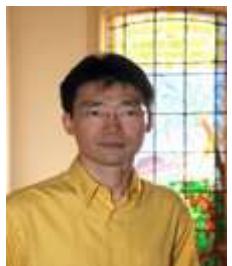

Fruit Trees: Guava Anthracnose, Peach Brown Rot

Sugarcane: Orange and Brown Rust

Oil Palm: Fatal Yellowing (abiotic)

Citrus Sudden Death: epidemiological  
similarity with Citrus Tristeza

# CENTER FOR ELECTRON MICROSCOPY - RESEARCHES ON PLANT DISEASES

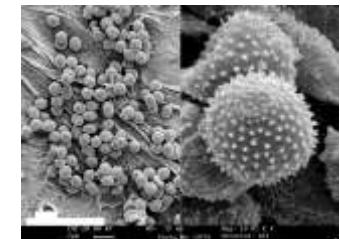

Prof. Francisco A. O. Tanaka & Elliot W. Kitajima

Detection and morphological  
characterization of plant pathogens

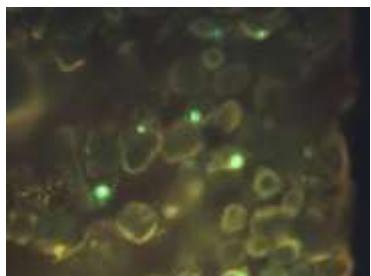

Rhabdo- and potyvirus in lettuce

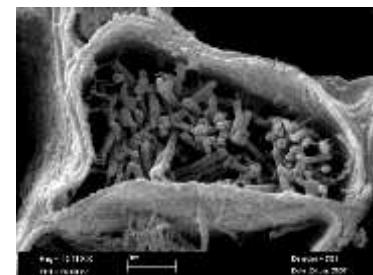

Oxalis rust

Histo- and cytopathology of plant pathogen infection

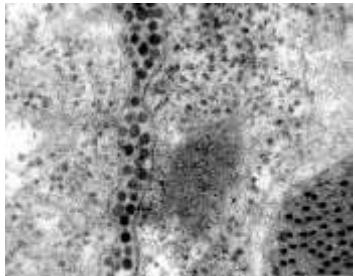

*In situ* detection of  
Citrus leprosis virus by  
immunofluorescence

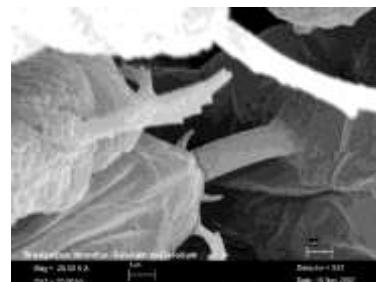

Liberibacter in the phloem vessel

Plant pathogen/vector relationship

Citrus leprosis  
virus within the  
vector mite  
*Brevipalpus*  
*phoenicis*

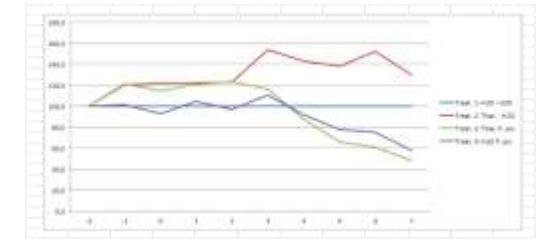

SEM image of  
*Brevipalpus* mite  
feeding on citrus  
leaf

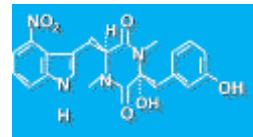

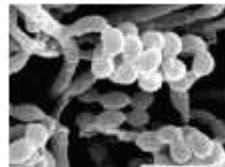

# LABORATORY OF PLANT DISEASE PHYSIOLOGY AND BIOCHEMISTRY

Prof. Sérgio F. Pascholati

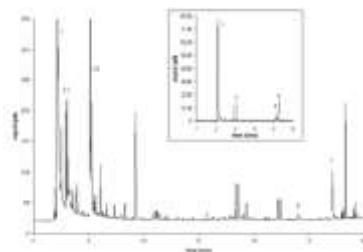

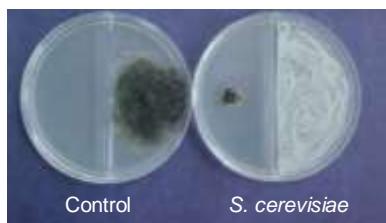

- Physiology and biochemistry of plant-pathogen interactions

- Induced disease resistance

Thaxtomine A

- Biological control of plant pathogens (post-harvest)

# PLANT DISEASE DIAGNOSTIC CLINIC

Dra. Liliane de Diana Teixeira

The clinic provides plant disease diagnosis and control recommendations for anyone from home owners to commercial growers. Services include analysis of plant material and soil for bacterial, fungal, viral, and nematode pathogens.
