

# **APARELHO UROGENITAL**

## **ÓRGÃOS GENITAIS MASCULINOS**

# ÓRGÃOS GENITAIS MASCULINOS

## COMPONENTES ANATÔMICOS:

- Testículos;
- Epidídimo
- Ducto deferente;
- Uretra masculina
- Pênis;
- Glândulas acessórias;
- Escroto;
- Prepúcio;

**BULL**

# TESTÍCULOS

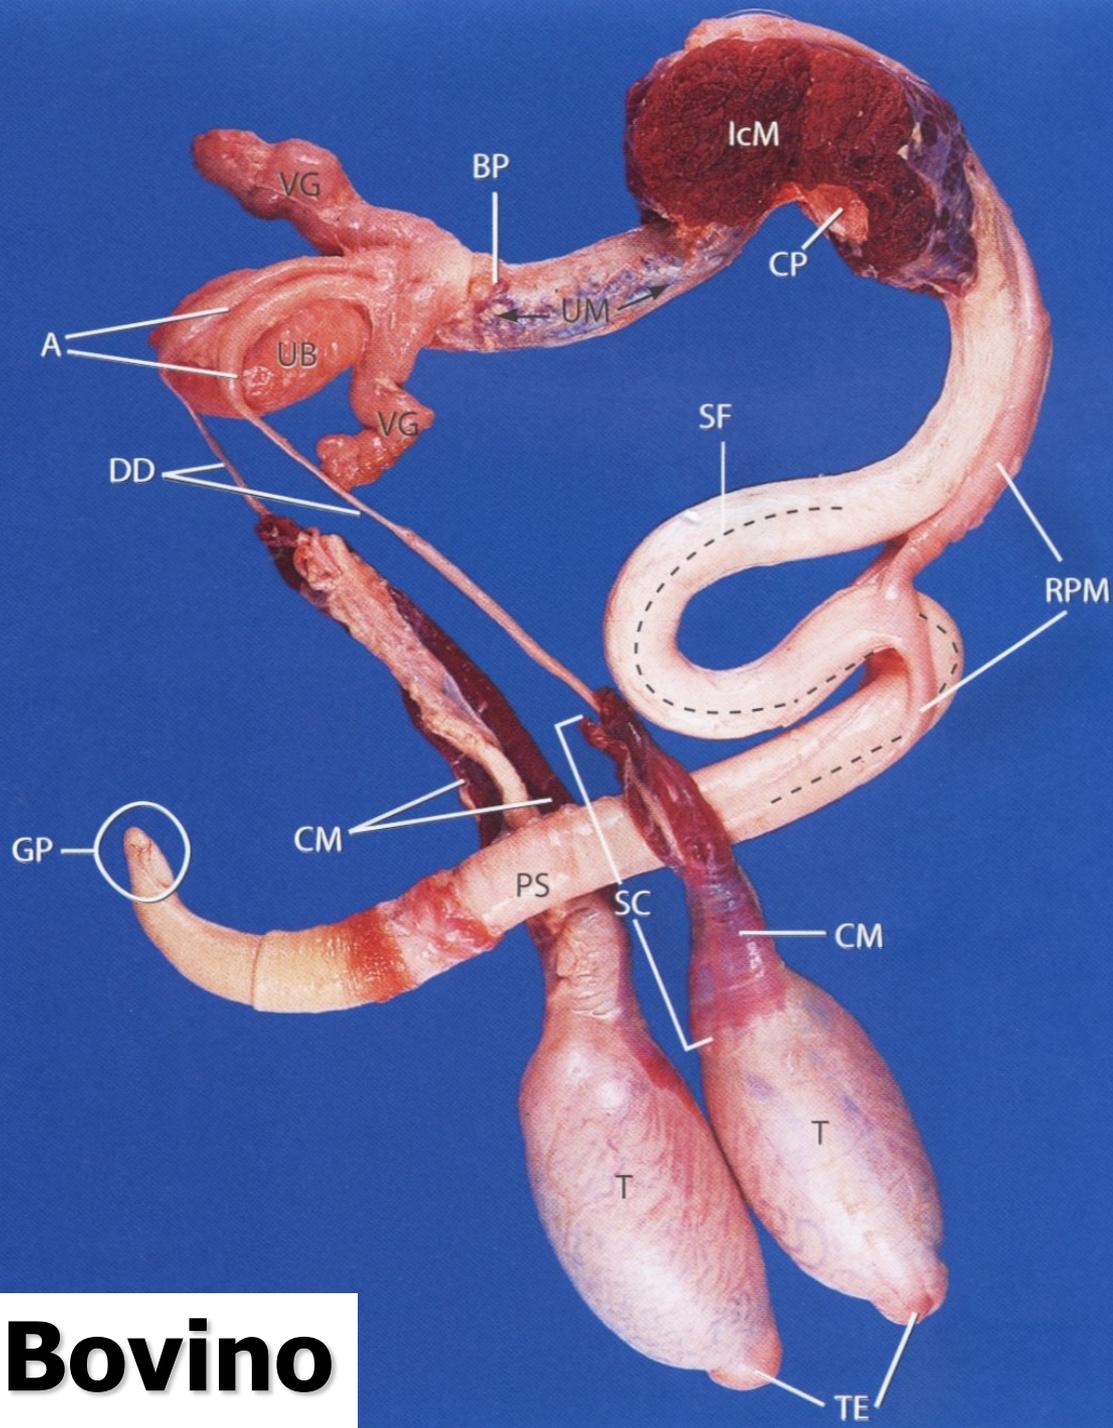

- **Conceito:**

- São órgãos elipsóides sólidos, com funções endócrinas e exócrinas.

# TESTÍCULOS

## ■ Orientação:

- Bovino, caprino e ovino:** Vertical;
- Garanhões e cães:** Horizontal;
- Cachaço e gatos:** Inclinação em direção ao ânus.

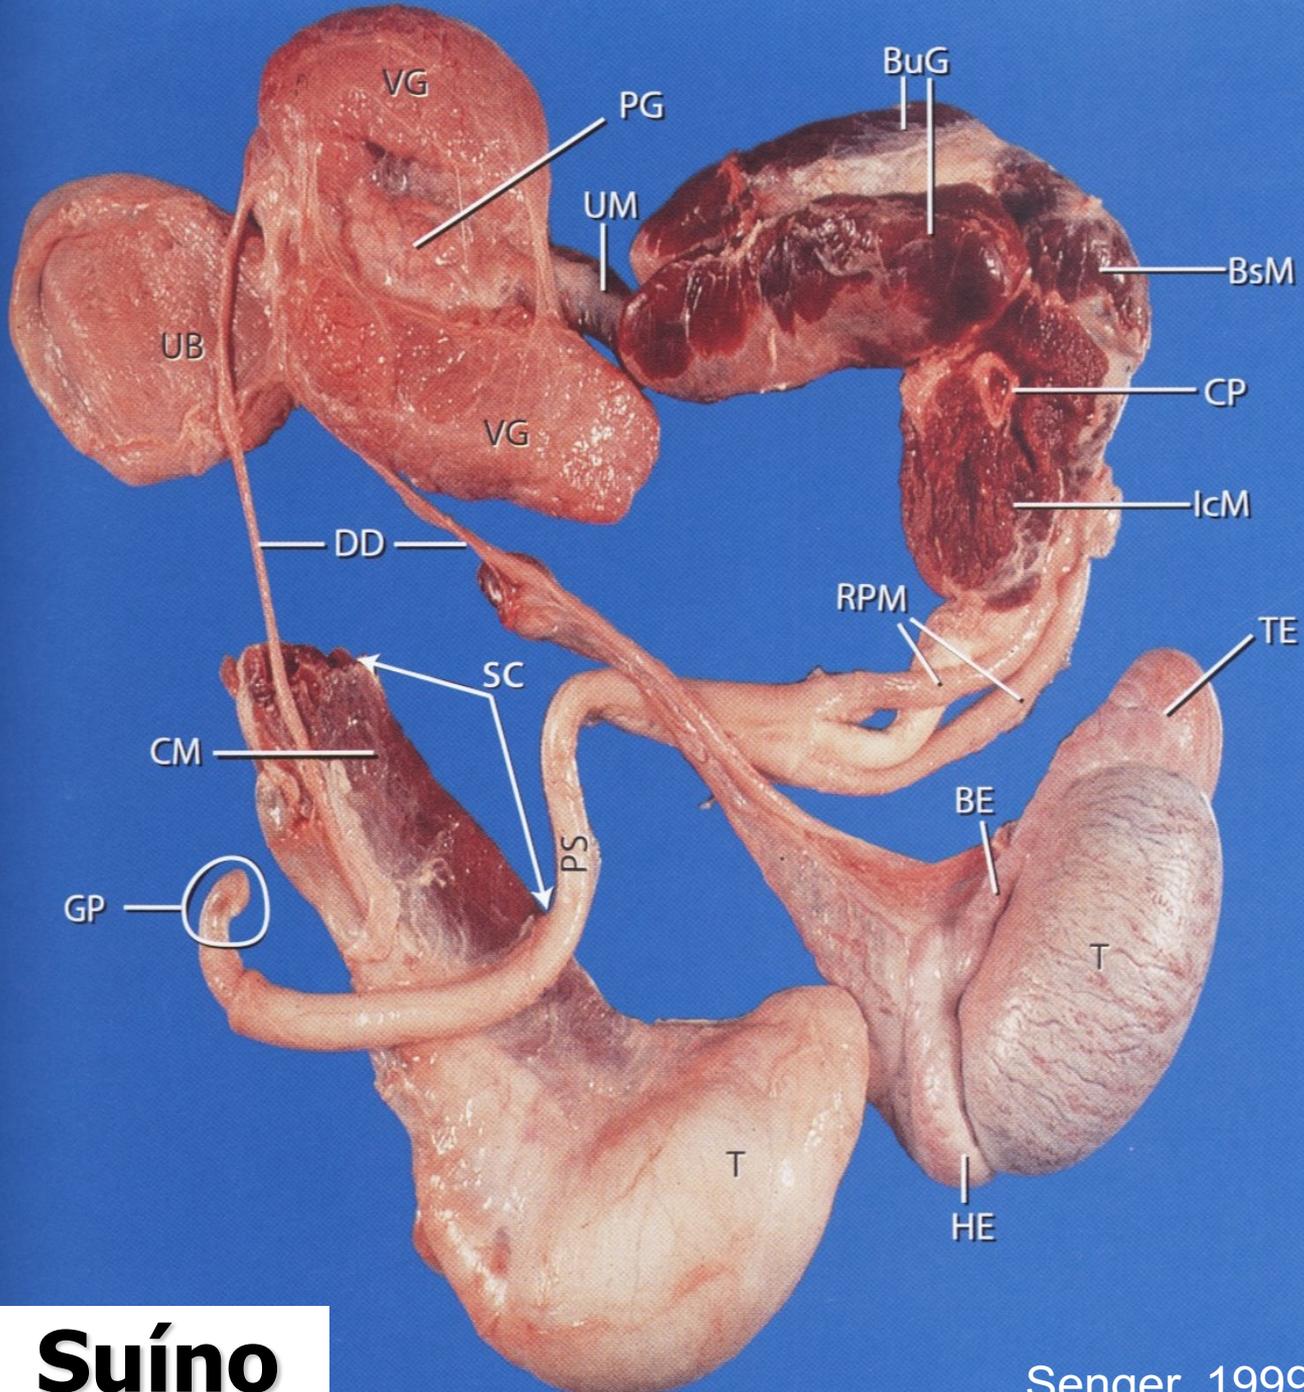

Vertical

# Descida Testicular

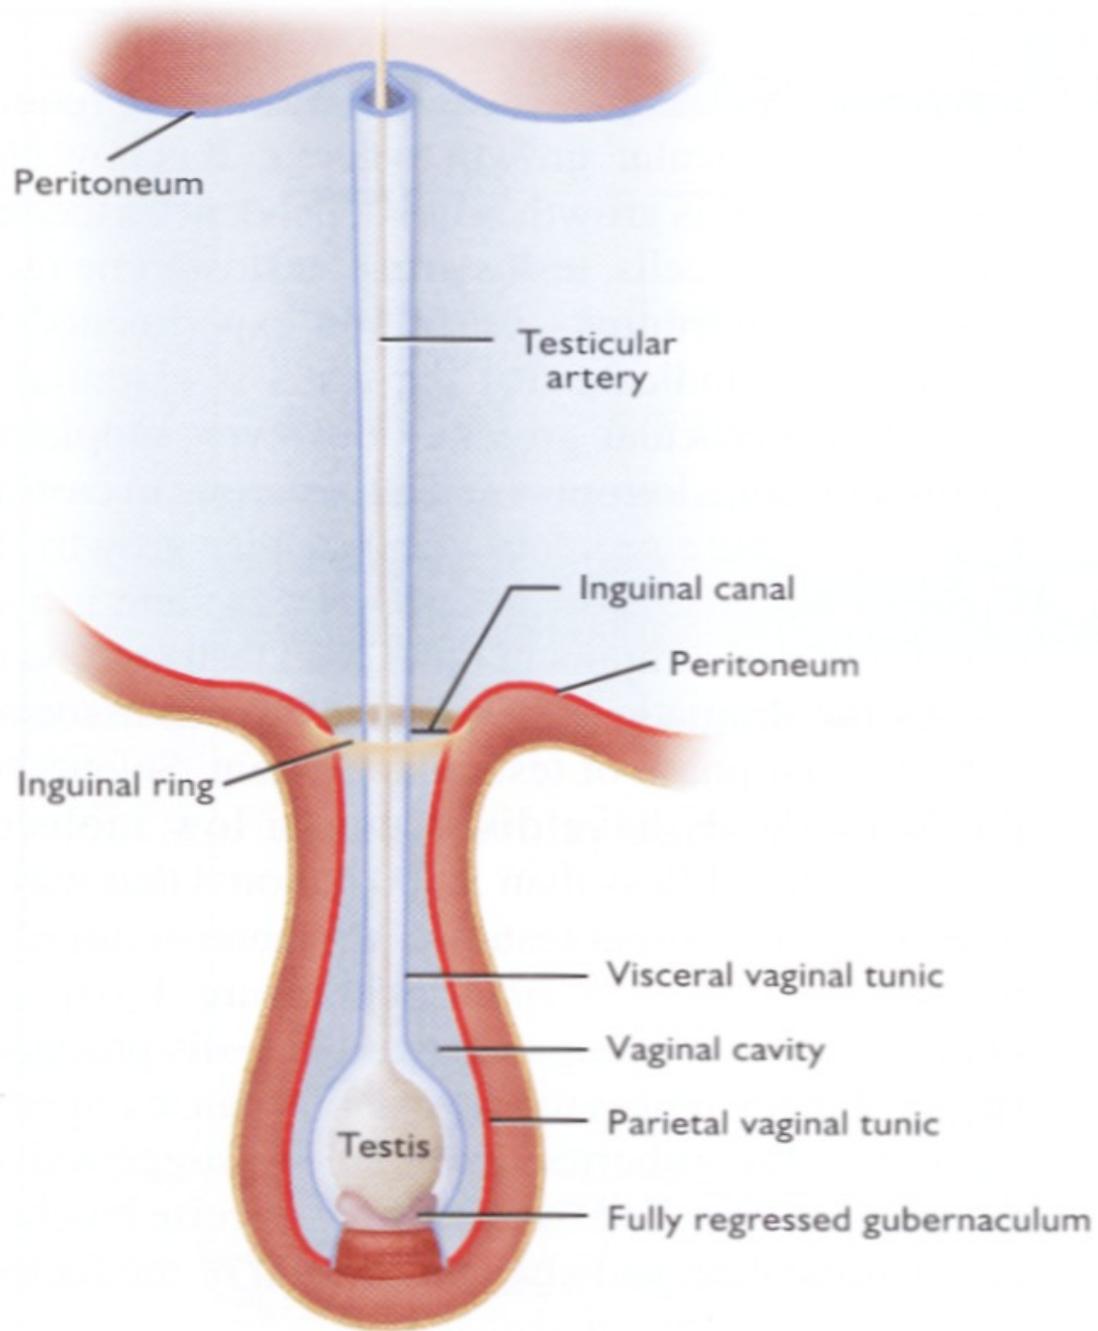

- **Conceito:**

- É o processo no qual os testículos migram do abdome para o escroto.

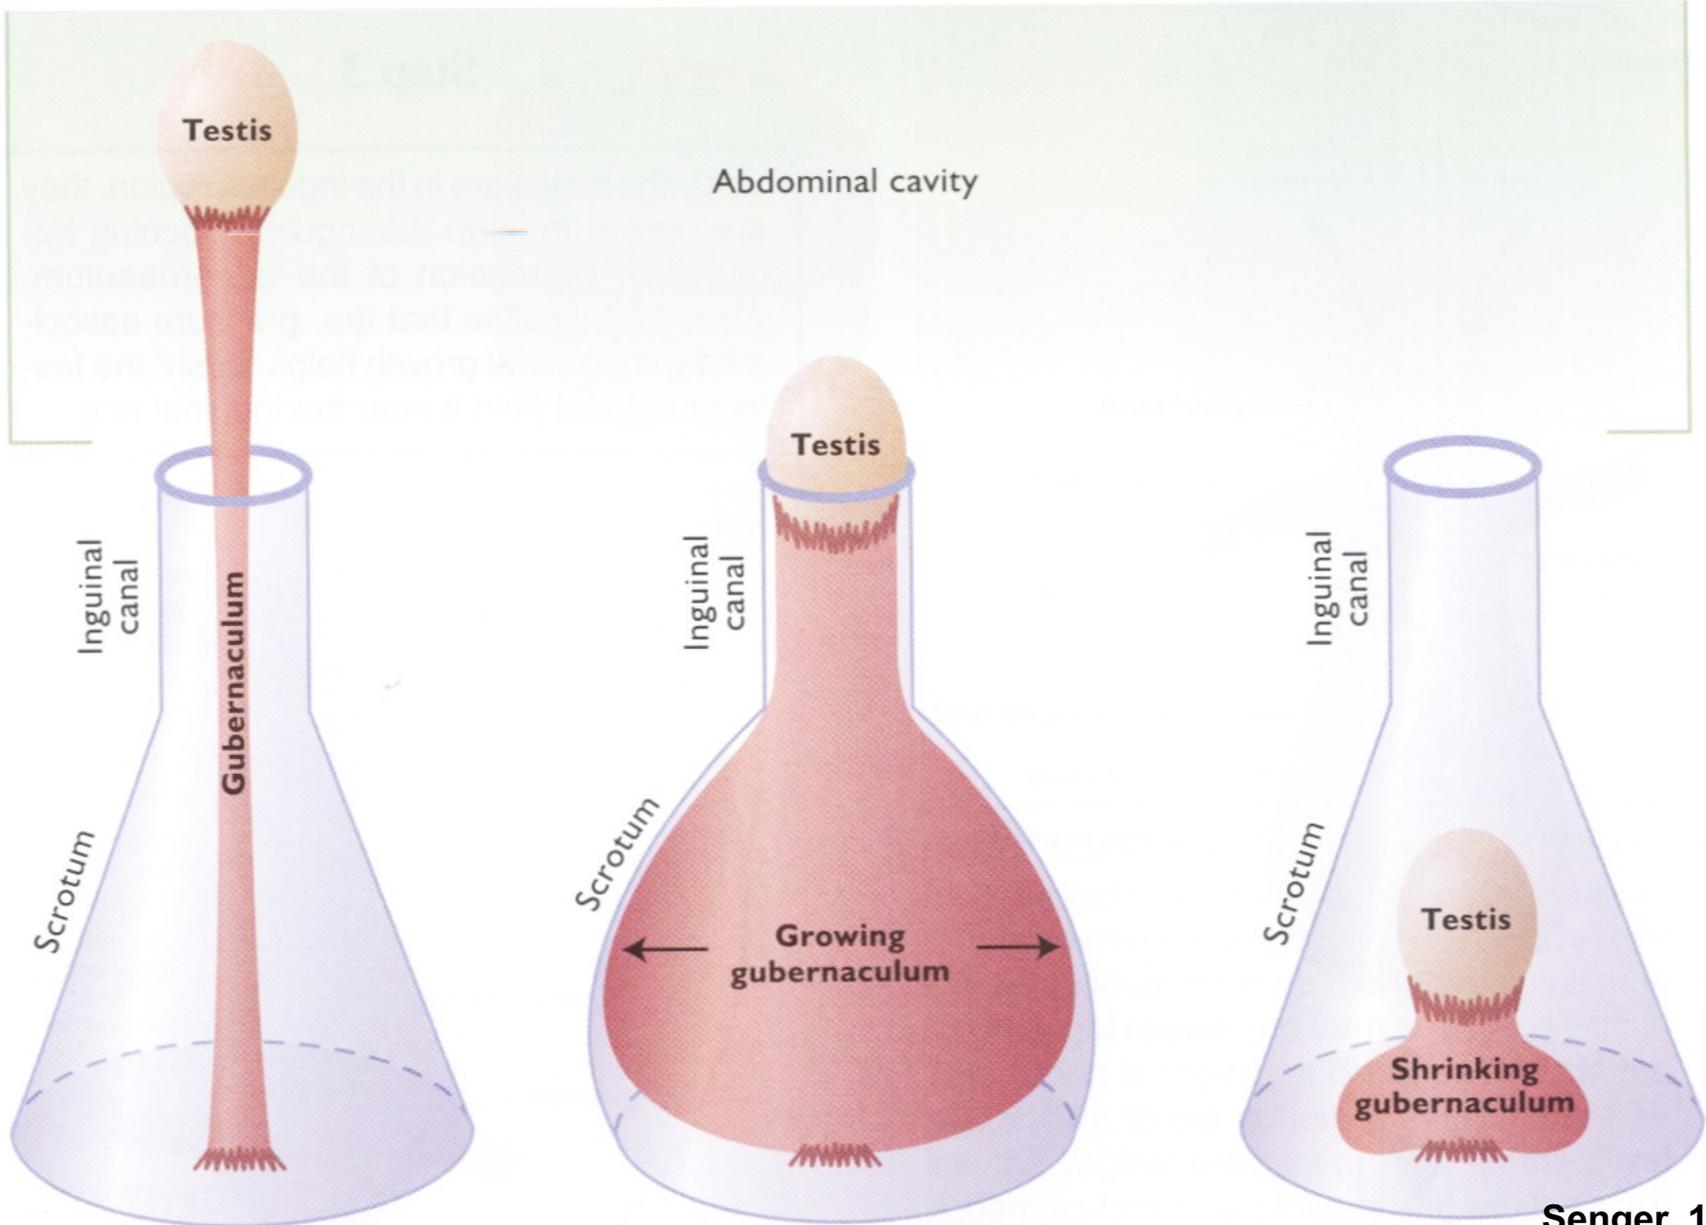

- **Importância clínica:**

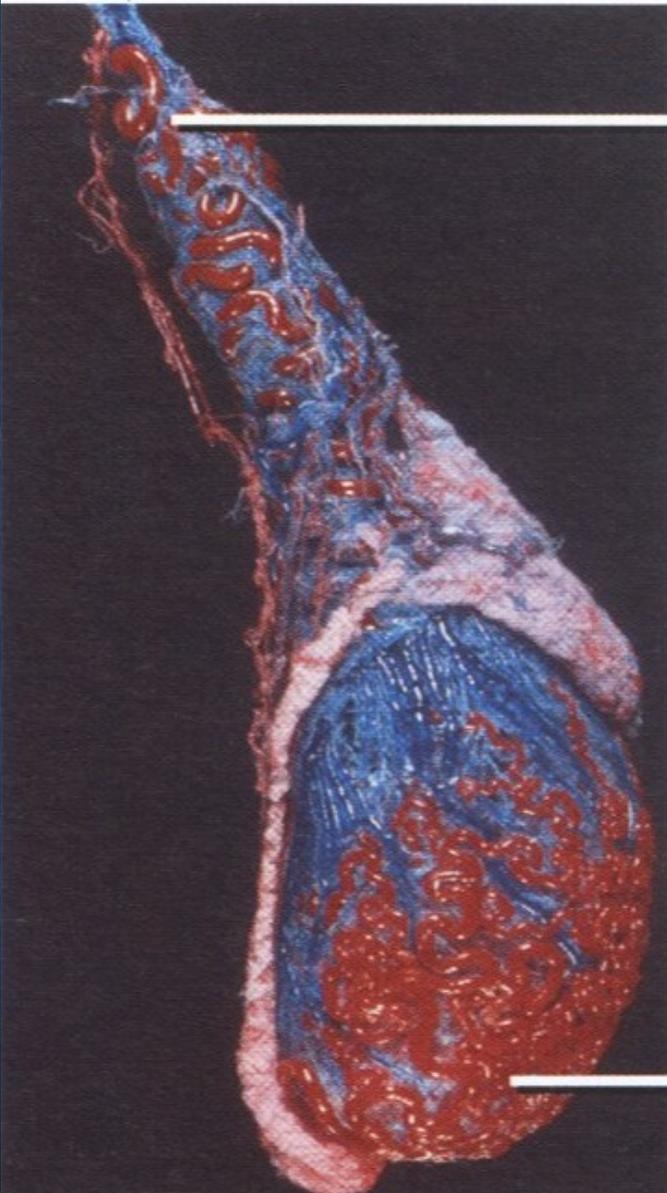

**Figure 4-9.** Example of Testicular Descent Using a Ball and Flask Model  
(Derived from discussions with Dr. C.J.G. Wensing, College of Veterinary Medicine,  
State University Utrecht, The Netherlands.)

# EPIDÍDIMO

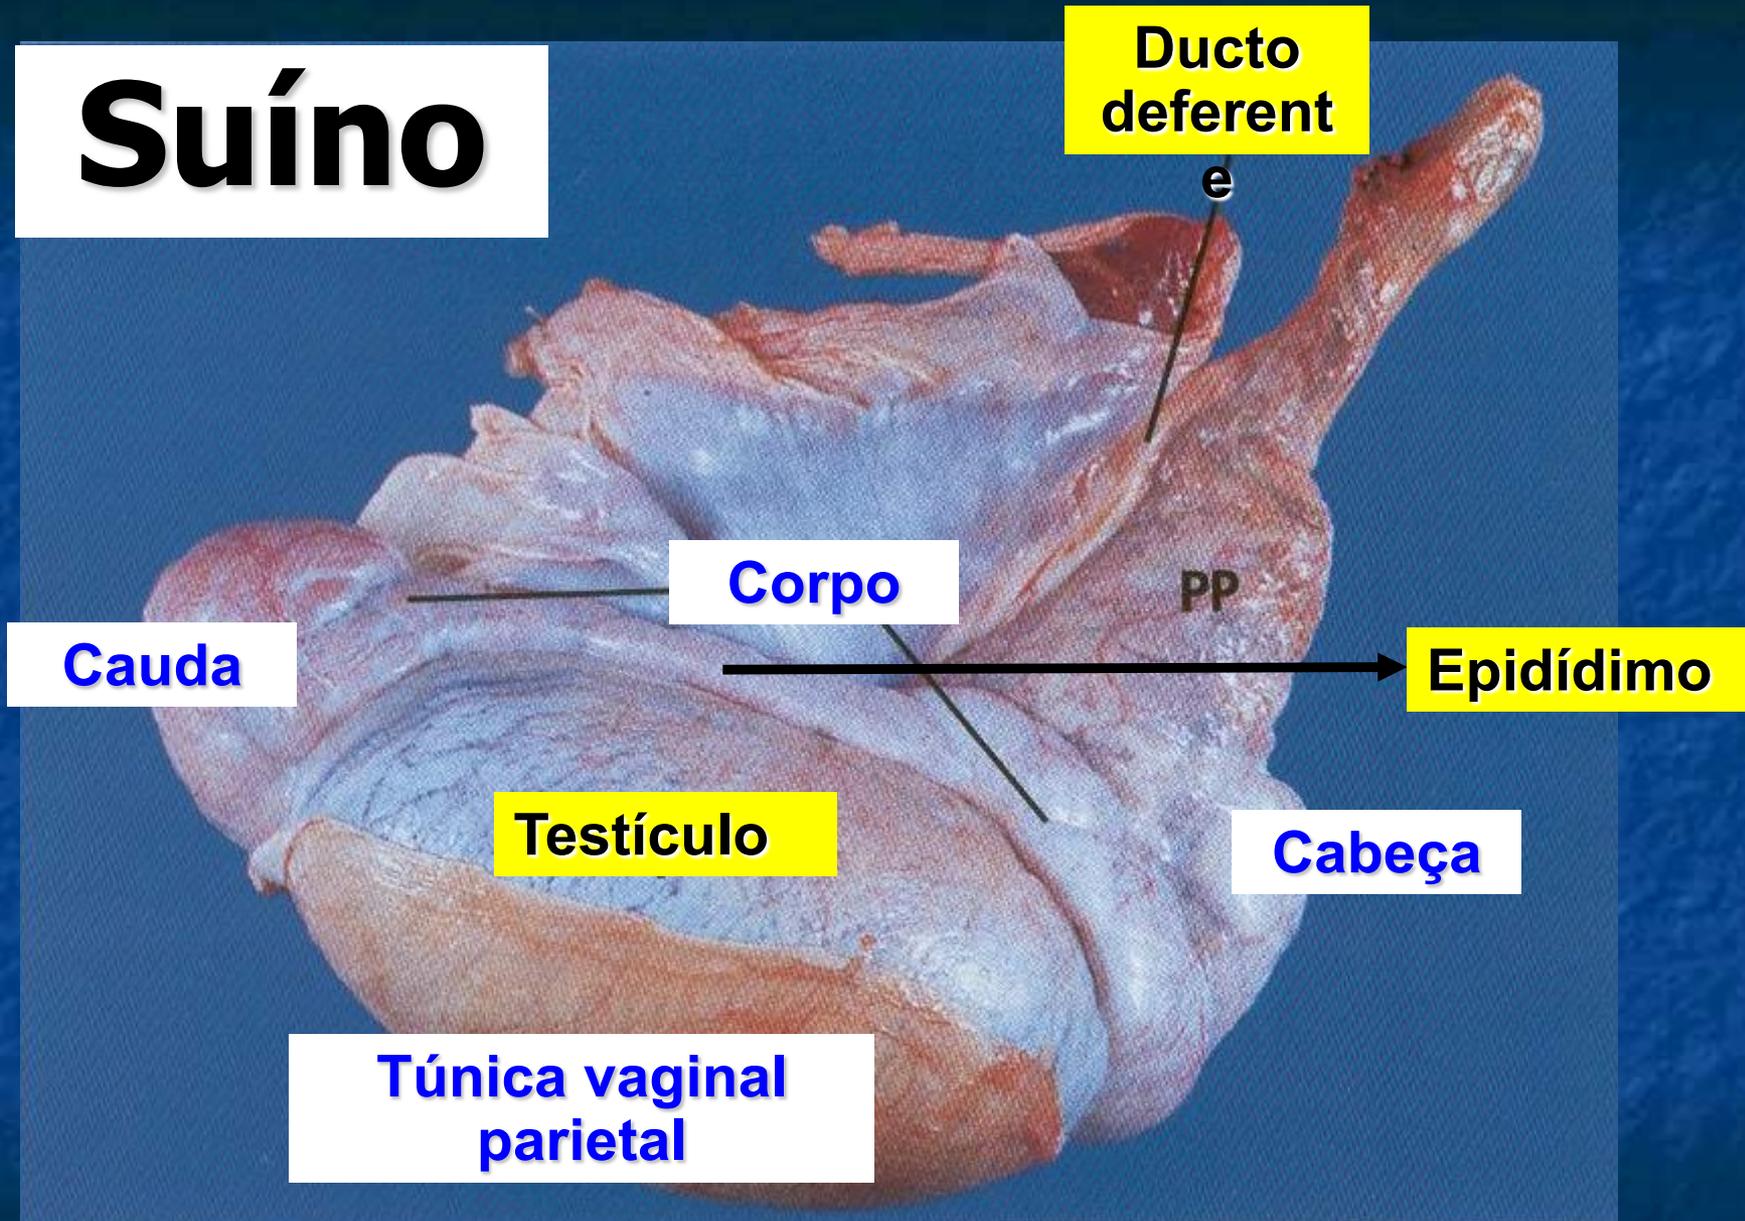

## ■ Conceito

- Estrutura ductal extragonadal, que transporta e armazena os espermatozóides.

## ■ Divisão Anatômica:

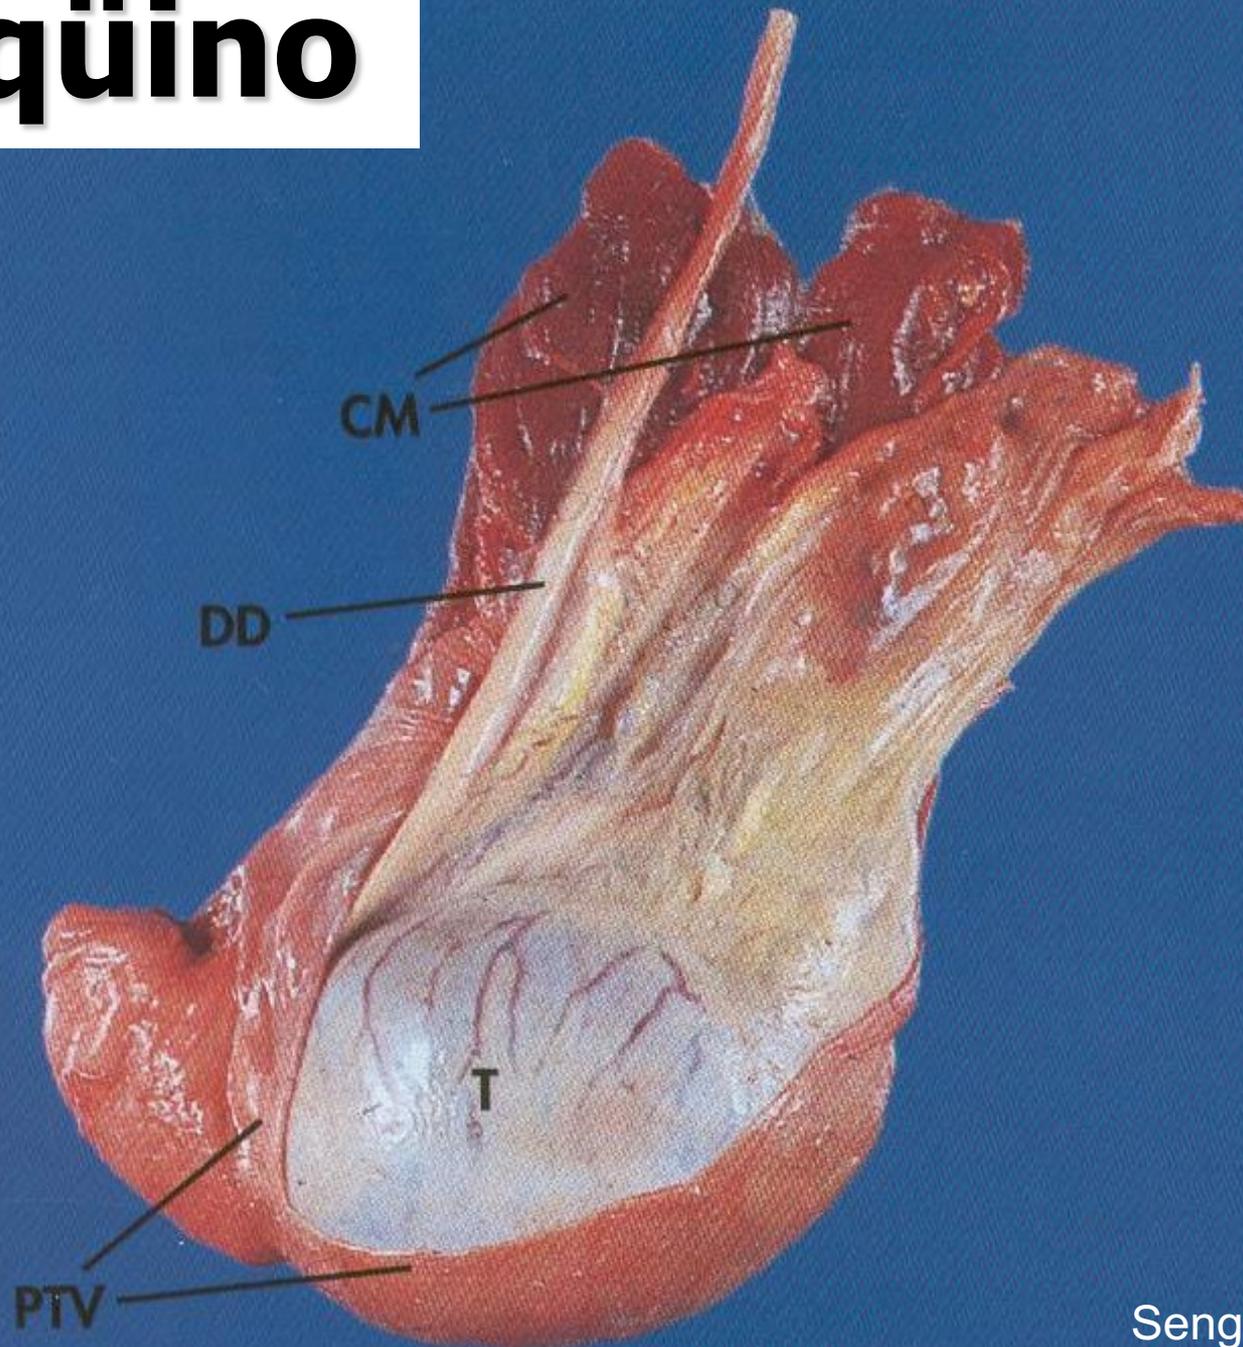

- cabeça;
- corpo;
- cauda.

# Suíno

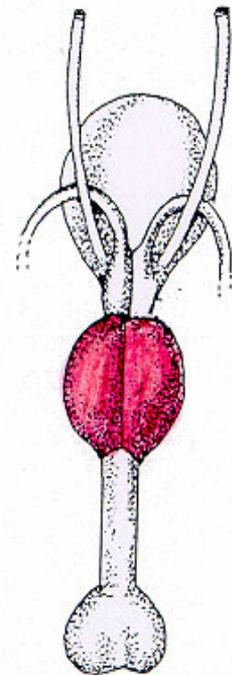

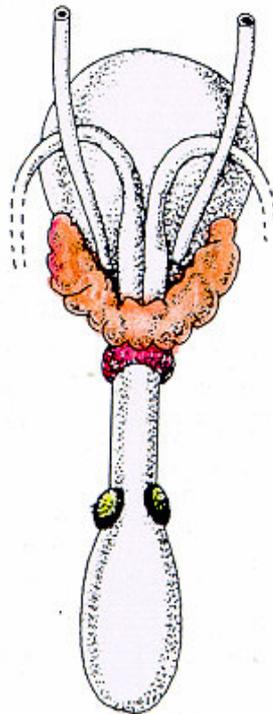

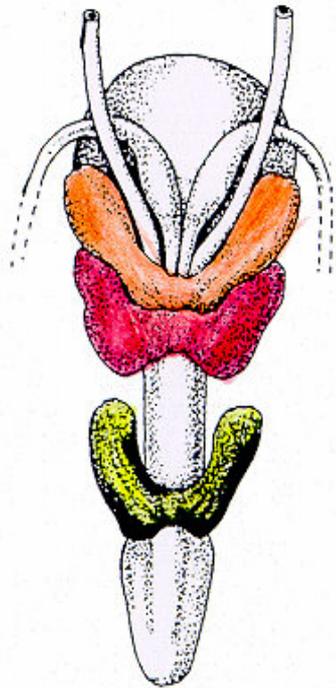

# **3 DUCTO DEFERENTE**

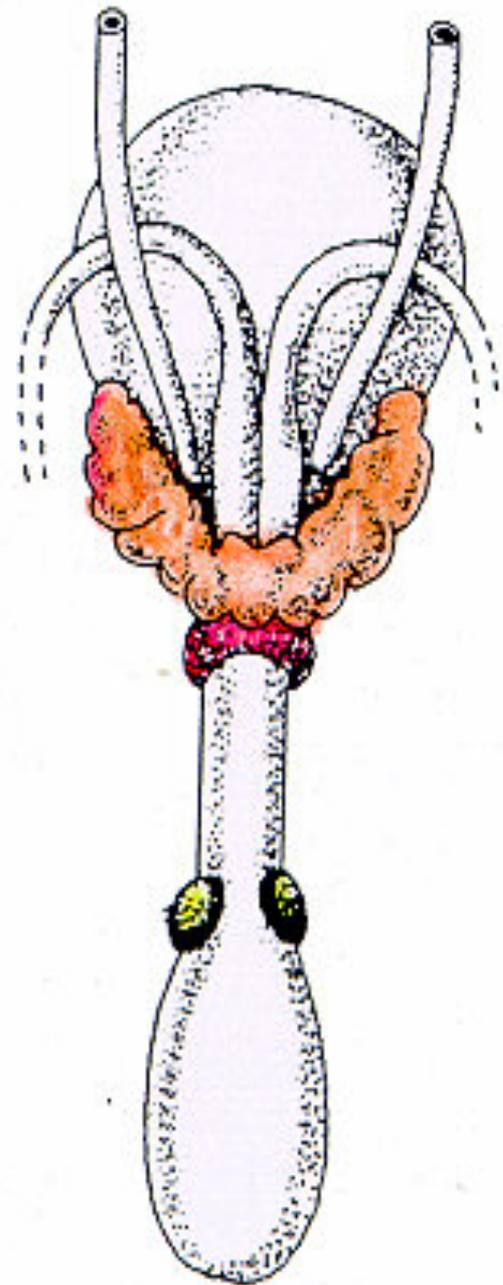

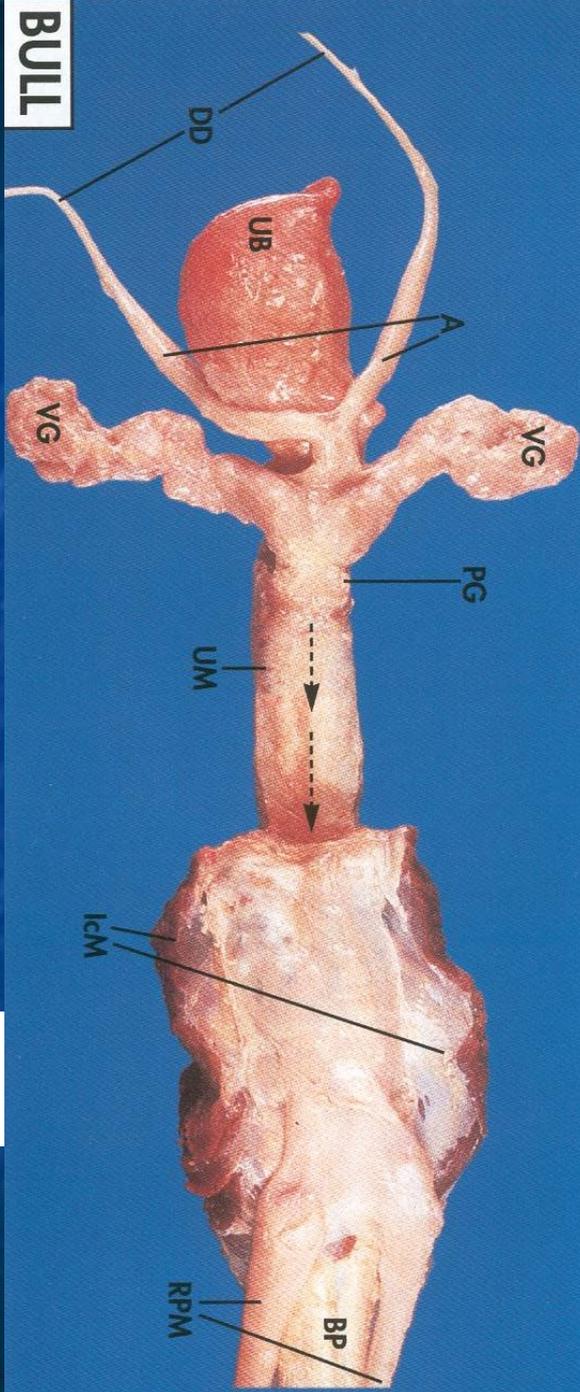

# Eqüino

# GLÂNDULAS ACESSÓRIAS

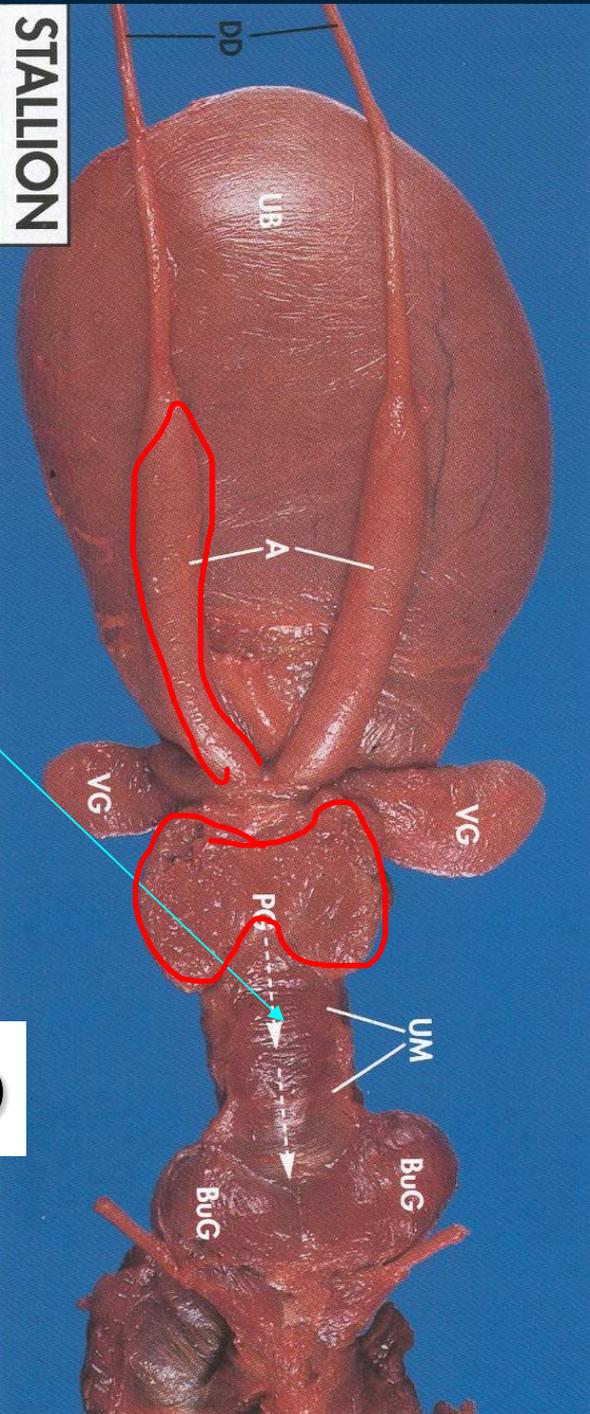

- **Funções:** contribuição para o volume do sêmen durante o transporte dos espermatozóides.
- **Próstata;**
- **Glândula ampular ou ampola do ducto deferente;**
- **Glândula vesicular;**
- **Glândula bulbouretral.**

# Uretra

**Gato**

# URETRA MASCULINA

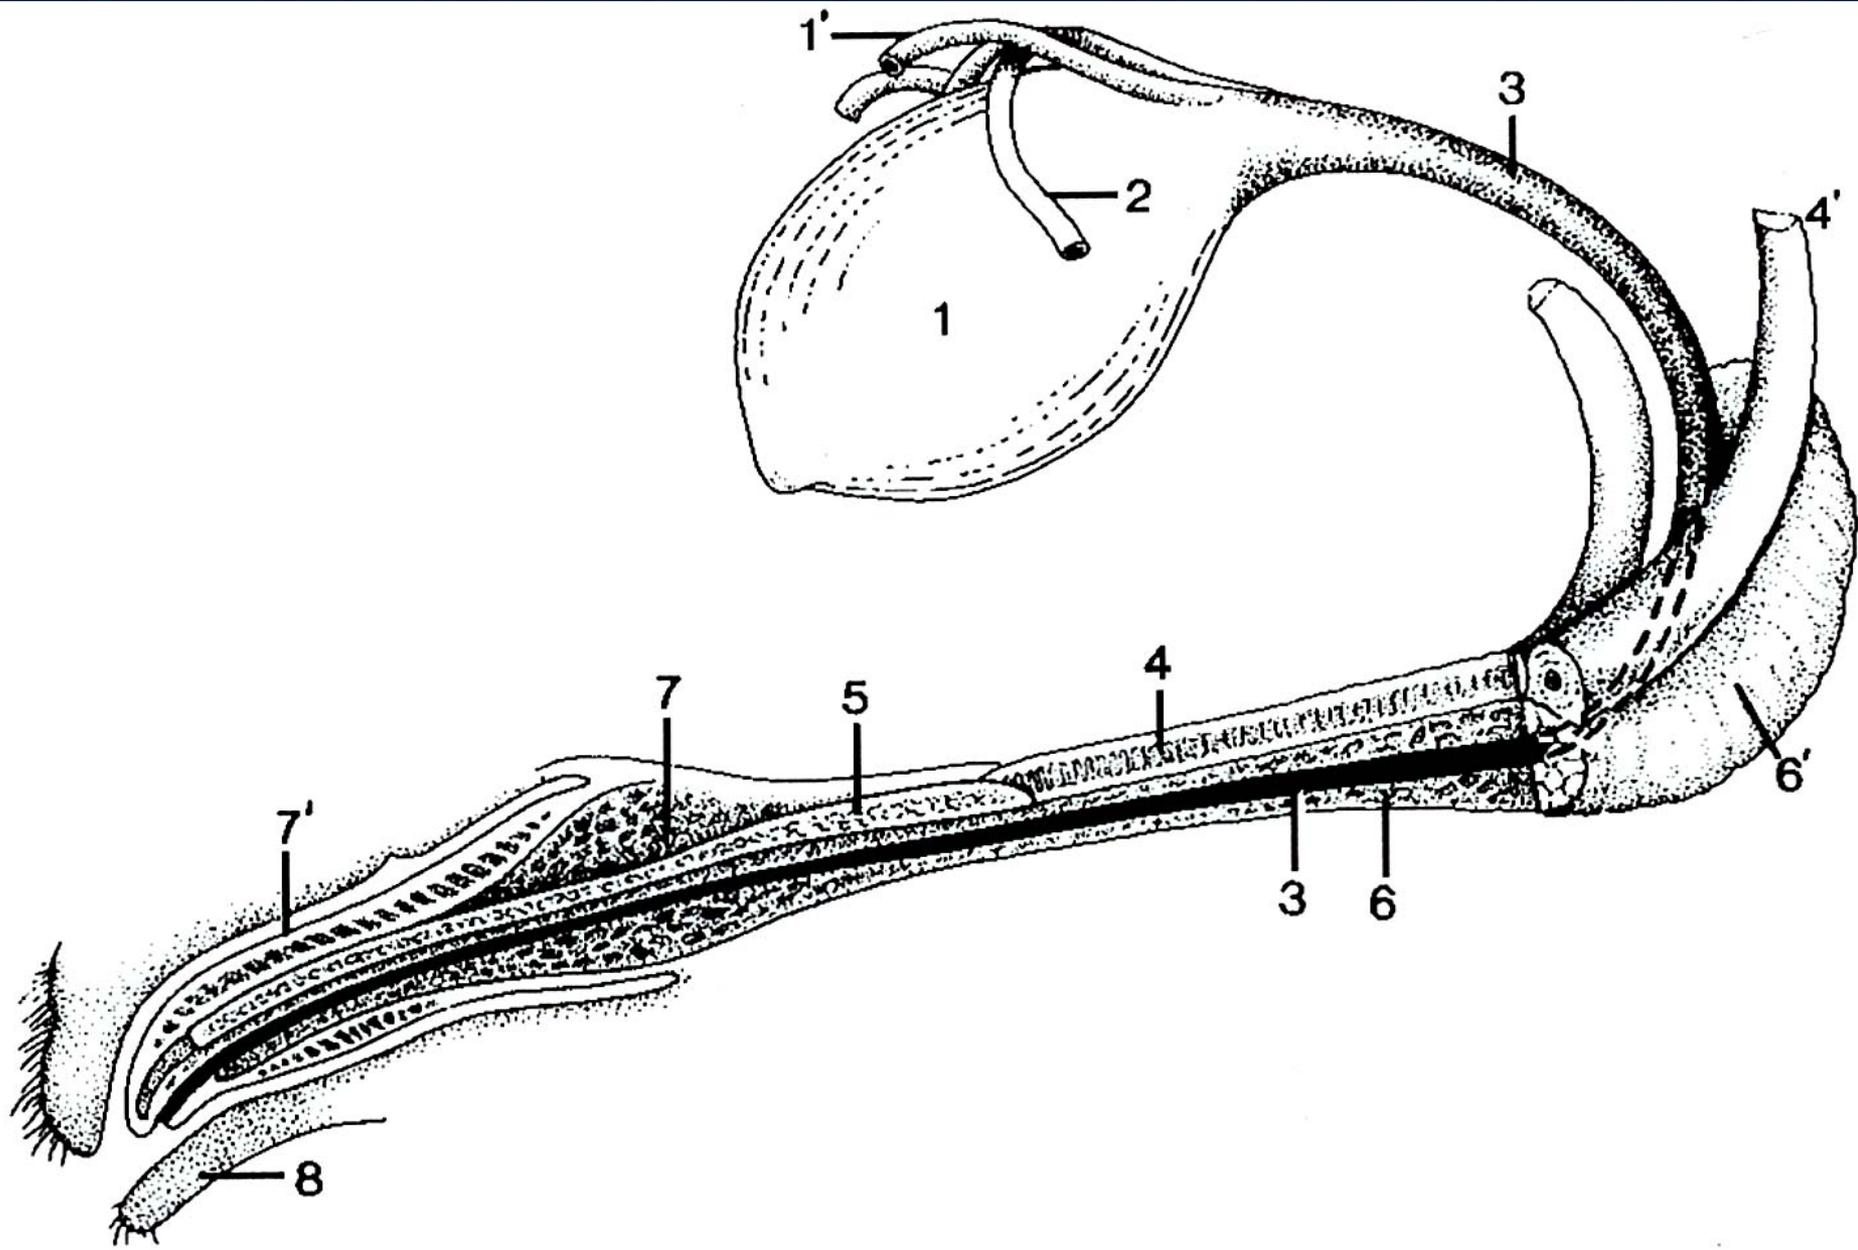

## ■ Conceito

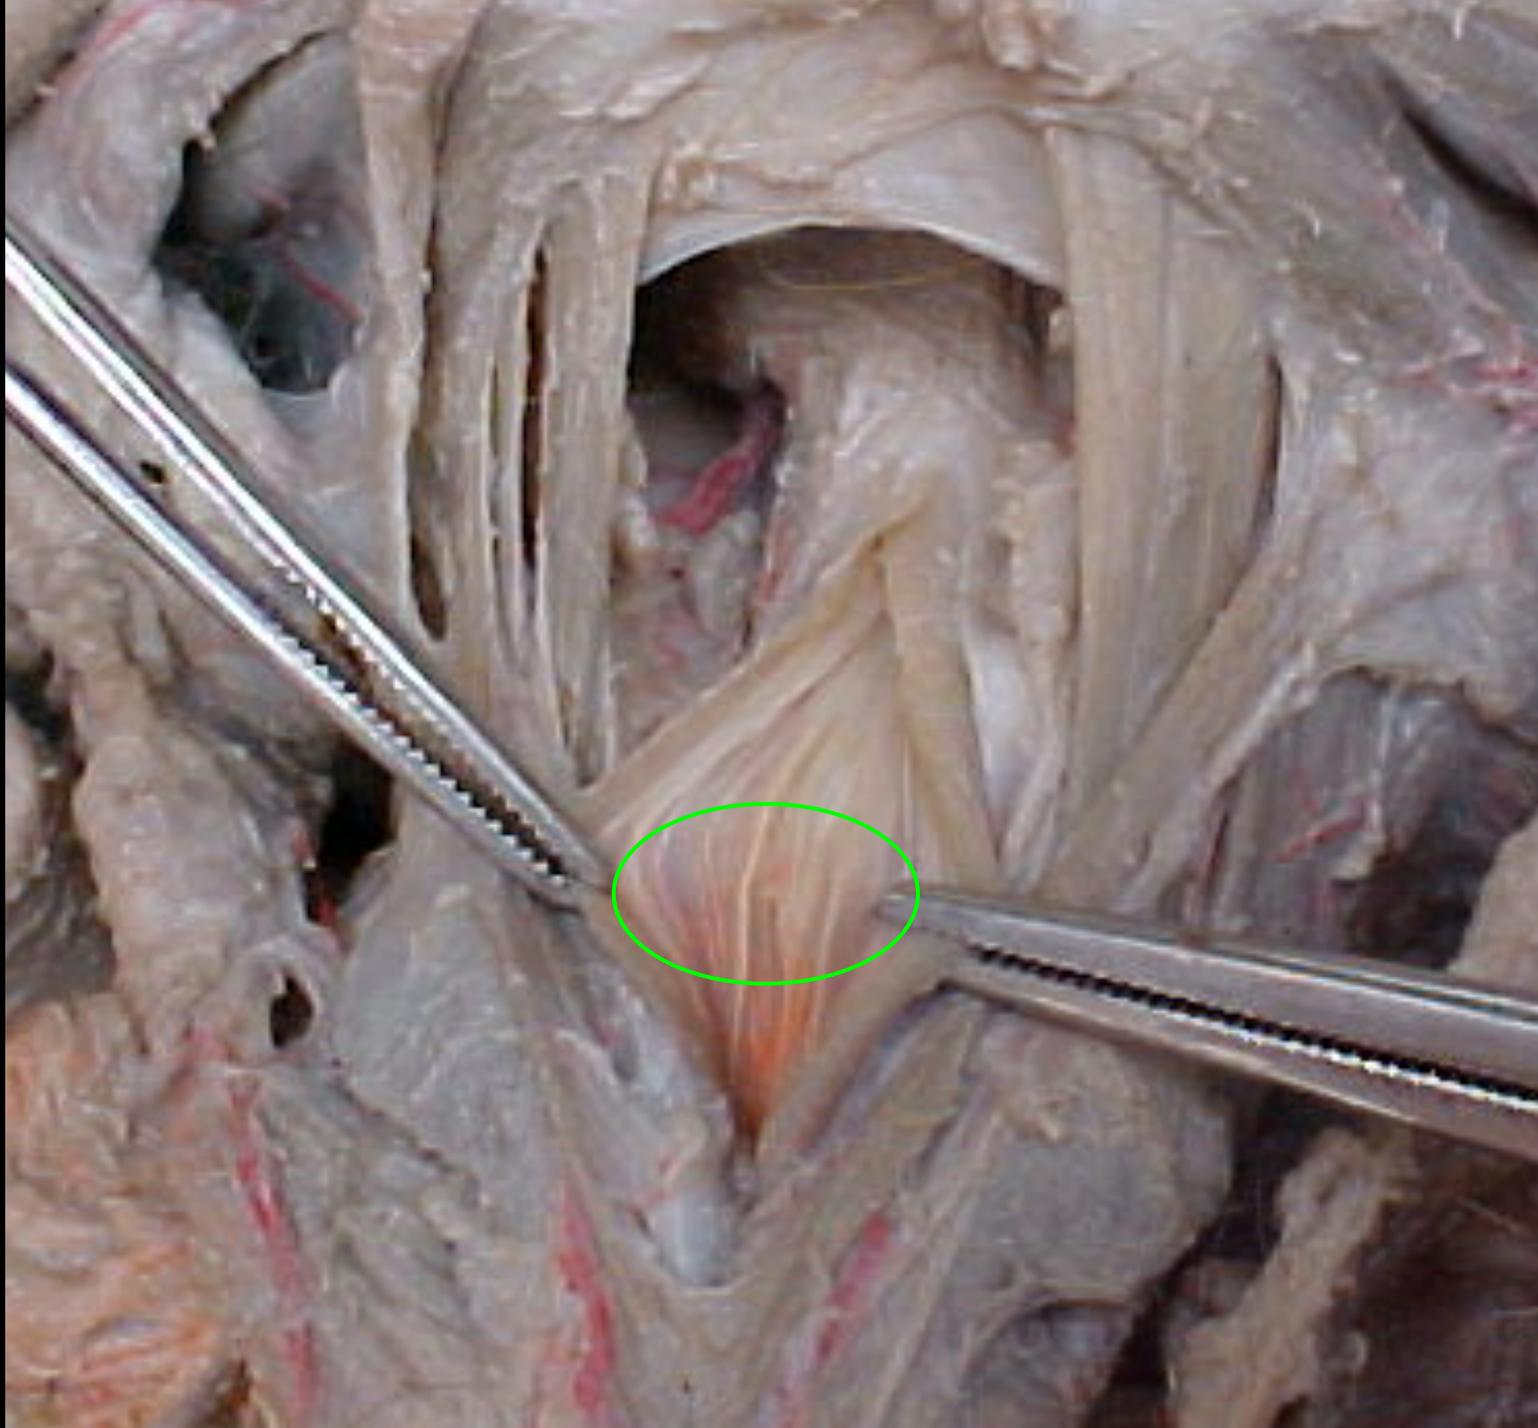

- Estrutura tubular que origina-se no colo da vesícula urinária, no óstio uretral interno e estende-se até o processo uretral;
- As secreções das gls. acessórias são depositadas na uretra.

# URETRA MASCULINA

Apresenta uma **porção pélvica** (pré-prostática e prostática) e uma **porção peniana**.

- É rodeada pelo tecido esponjoso e cavernoso.

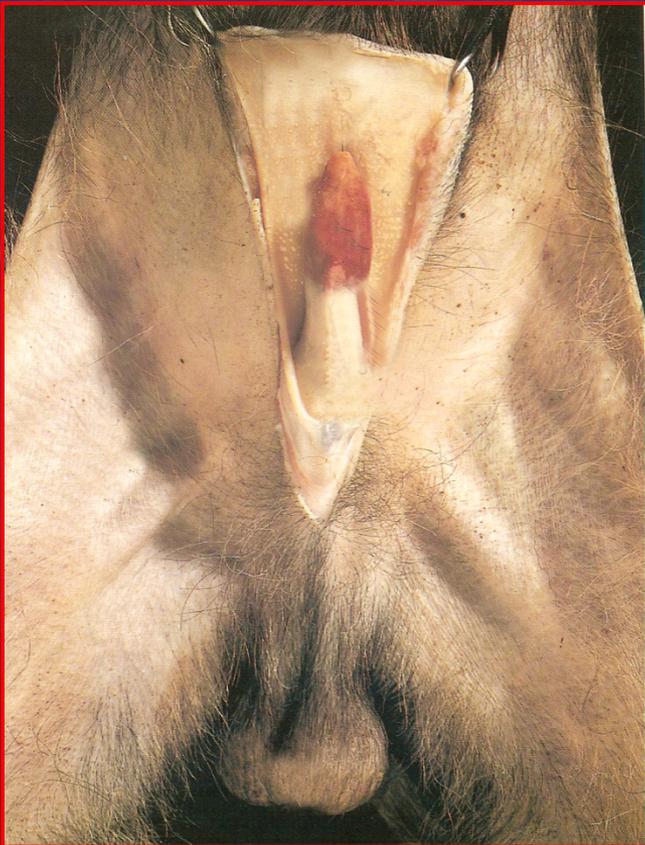

# PÊNIS

**Funções:**

Copulatória e condução urina;

**Localização:** parcialmente entre coxas;  
fixa-se à frente e dos lados  
do arco púbico

# PÊNIS

- **Divisão Anatômica:** raíz, corpo, glande;

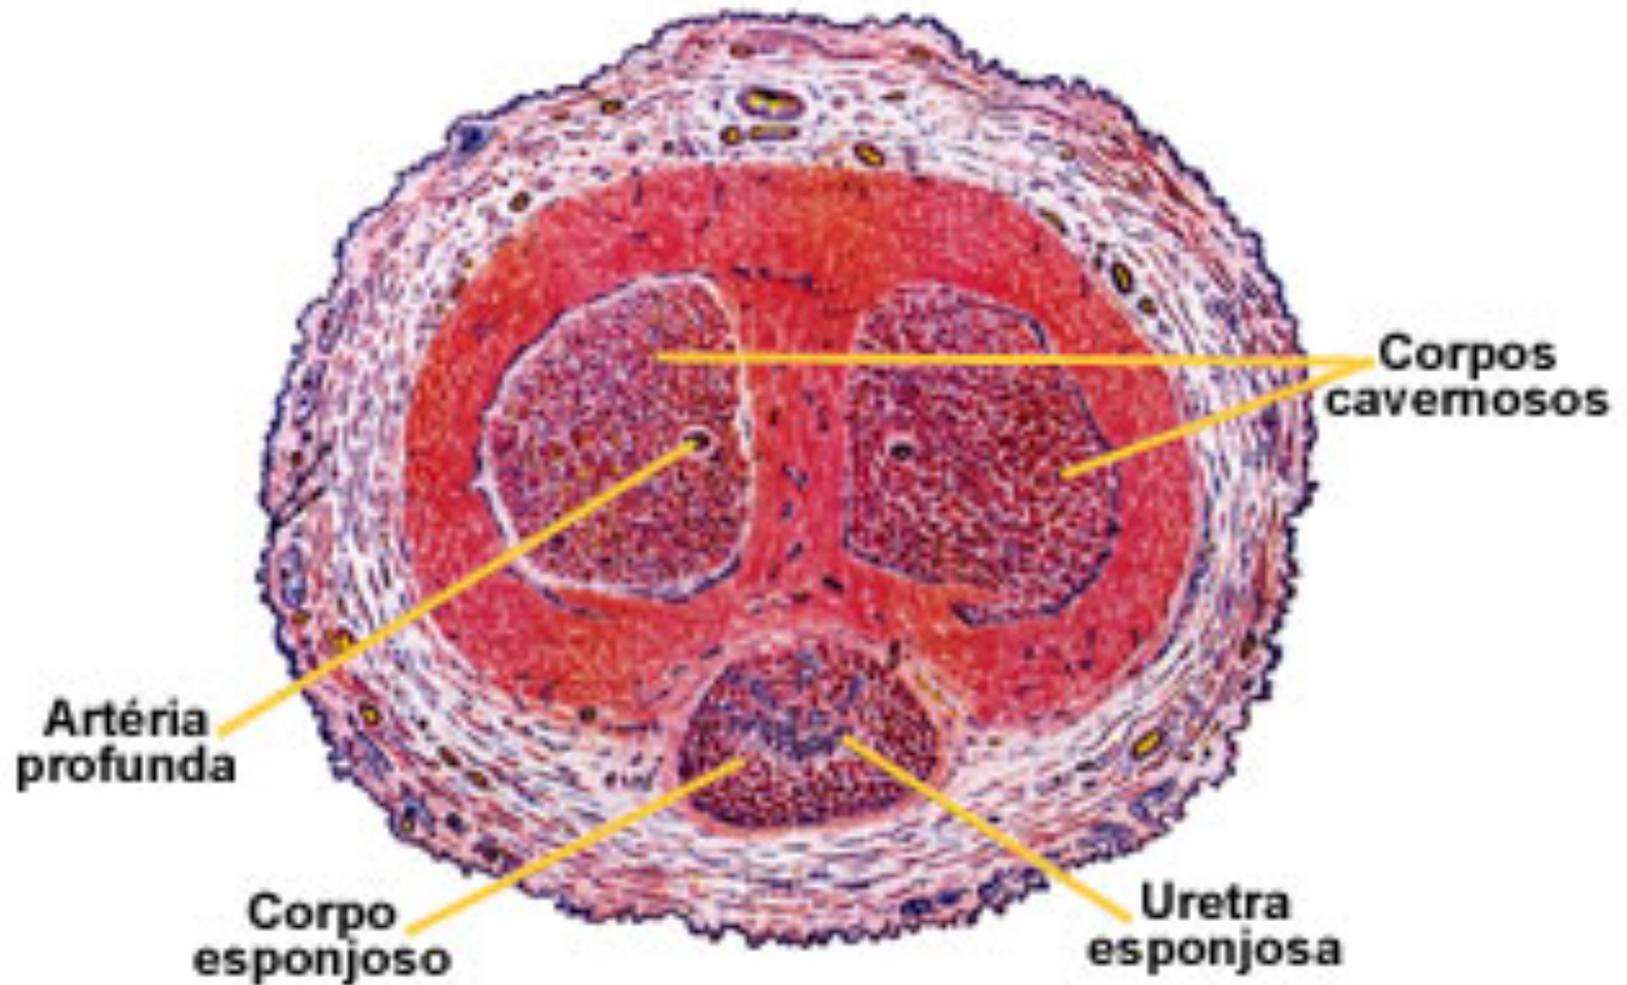

Porção livre – ápice e corpo

Porção fixa – raiz

- **Estrutura:**

- Corpos cavernosos
- Corpos esponjosos ;

## CORTE TRANSVERSAL DO PÊNIS

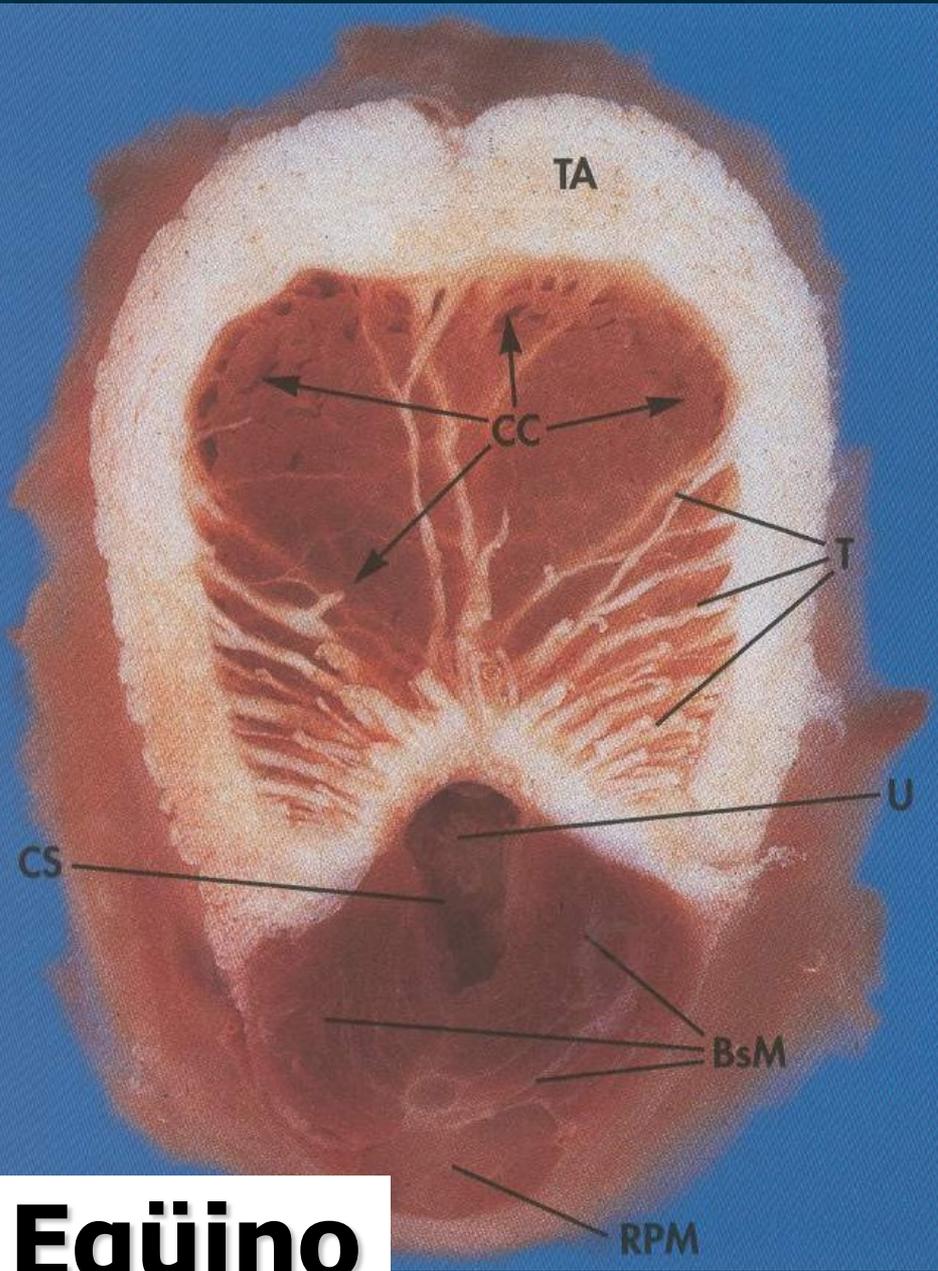

# PÊNIS

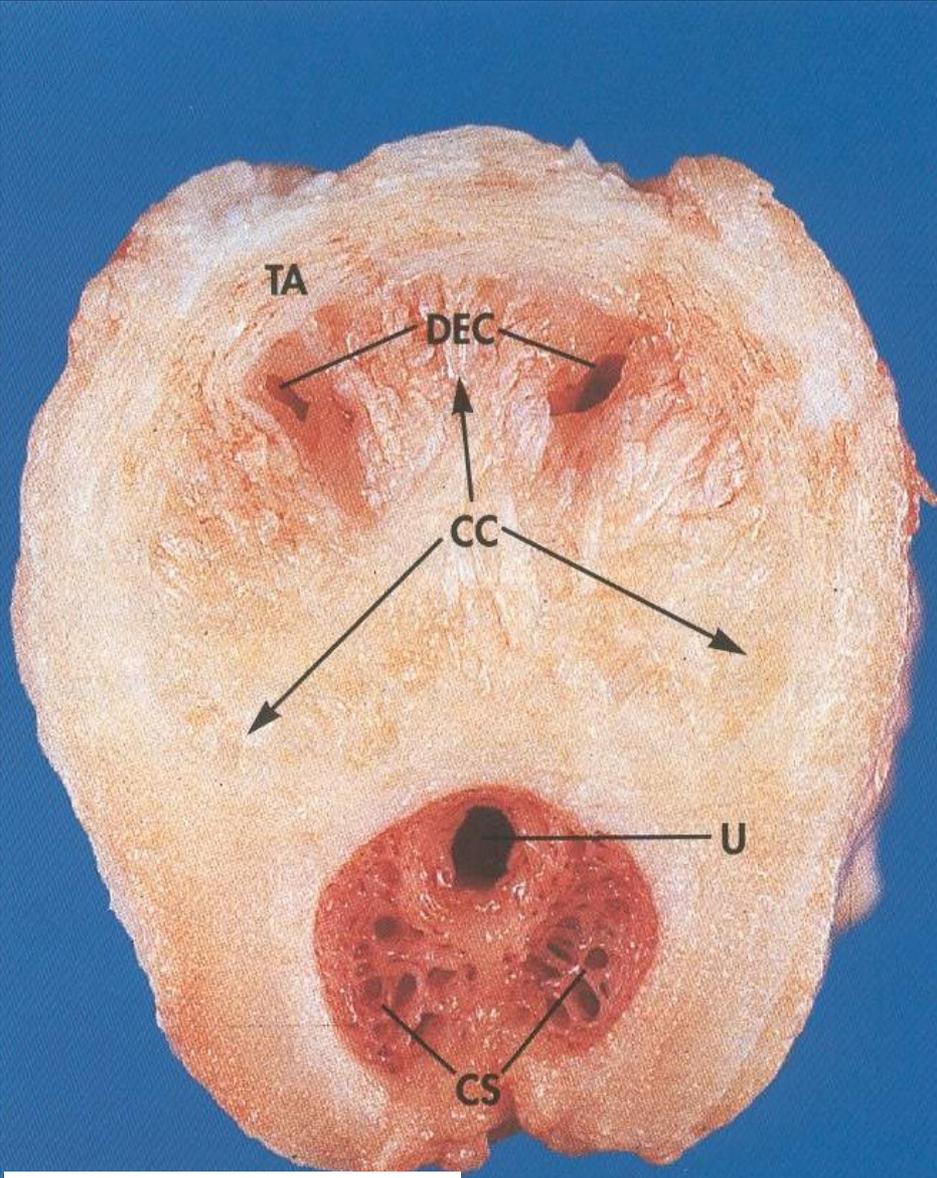

- **Tipos de pênis:**

- Pênis fibro-elástico:**

- Pênis musculocavernoso:**

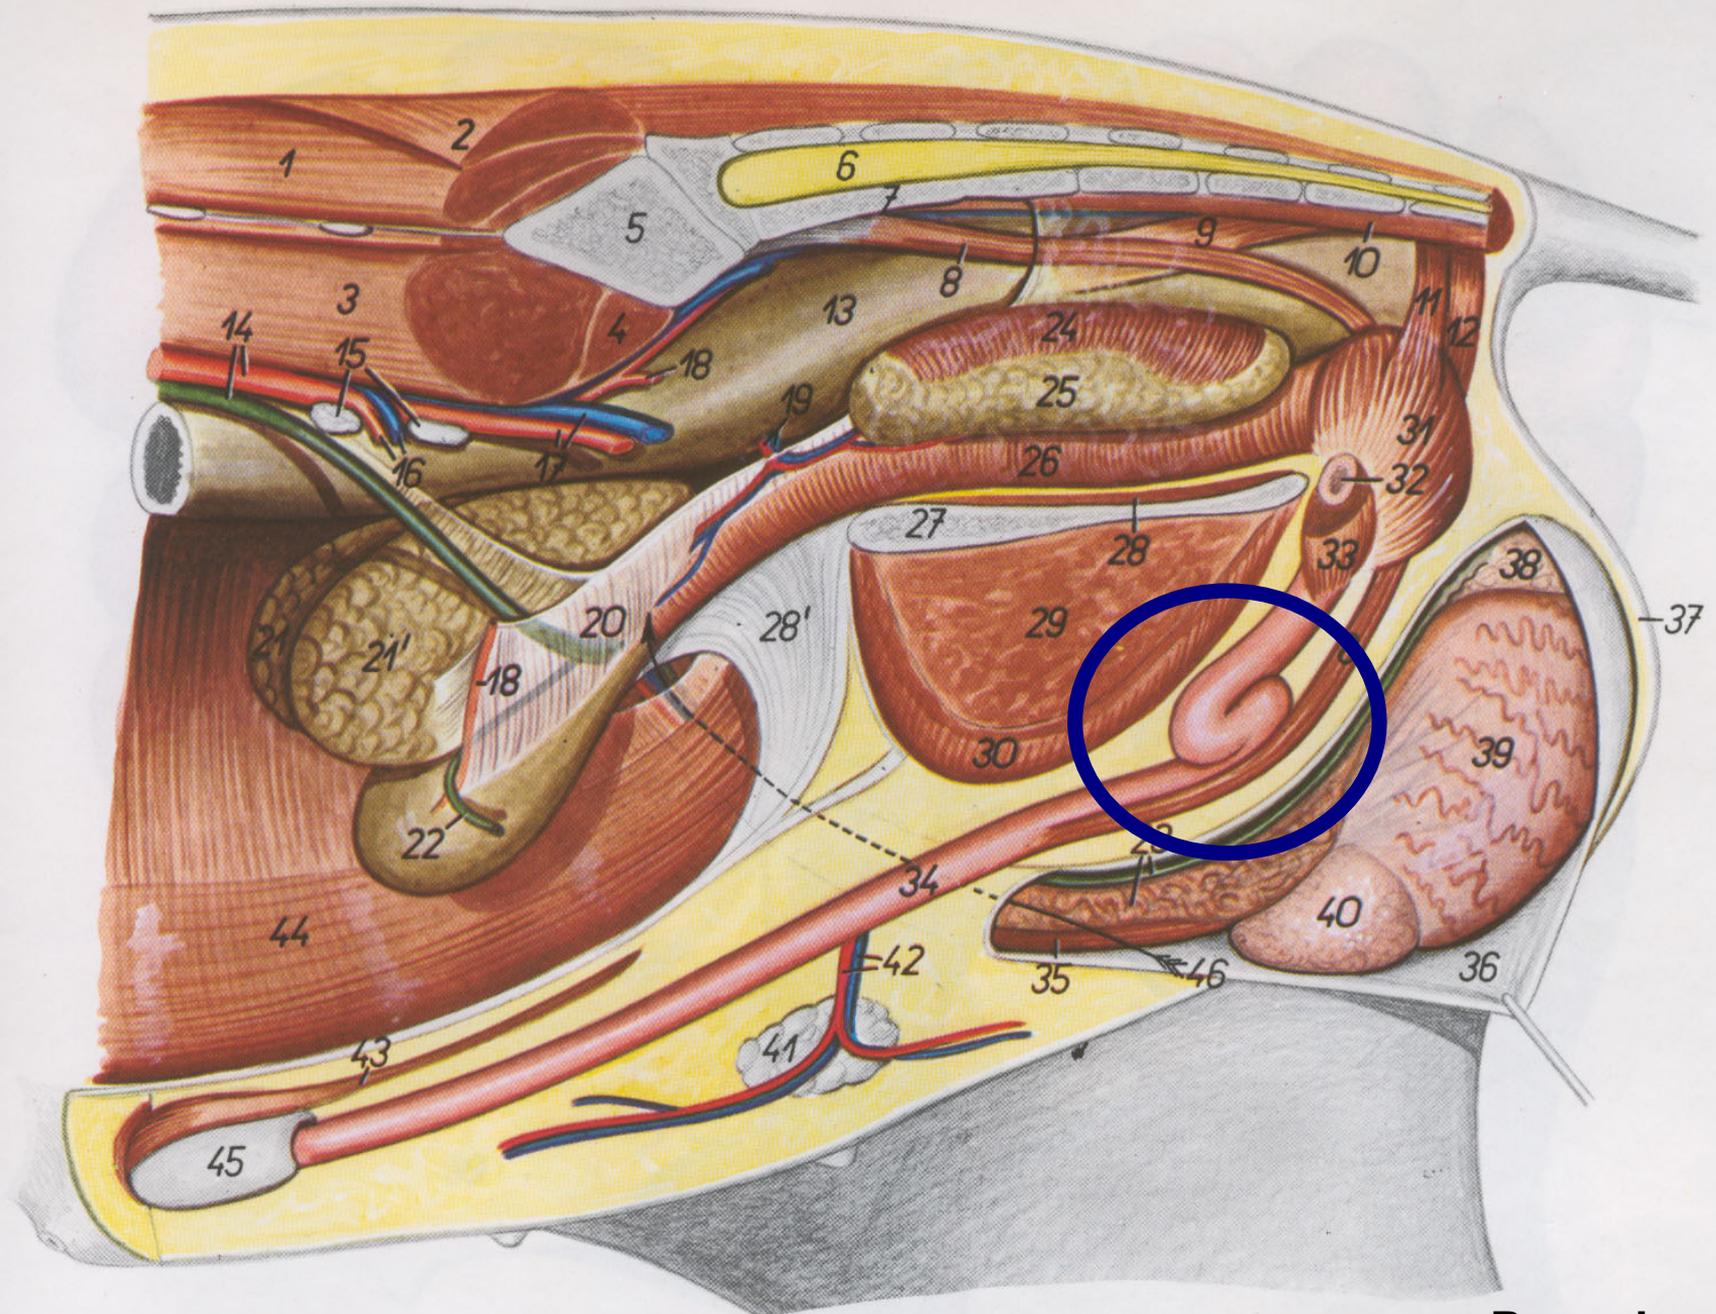

**Eqüino**

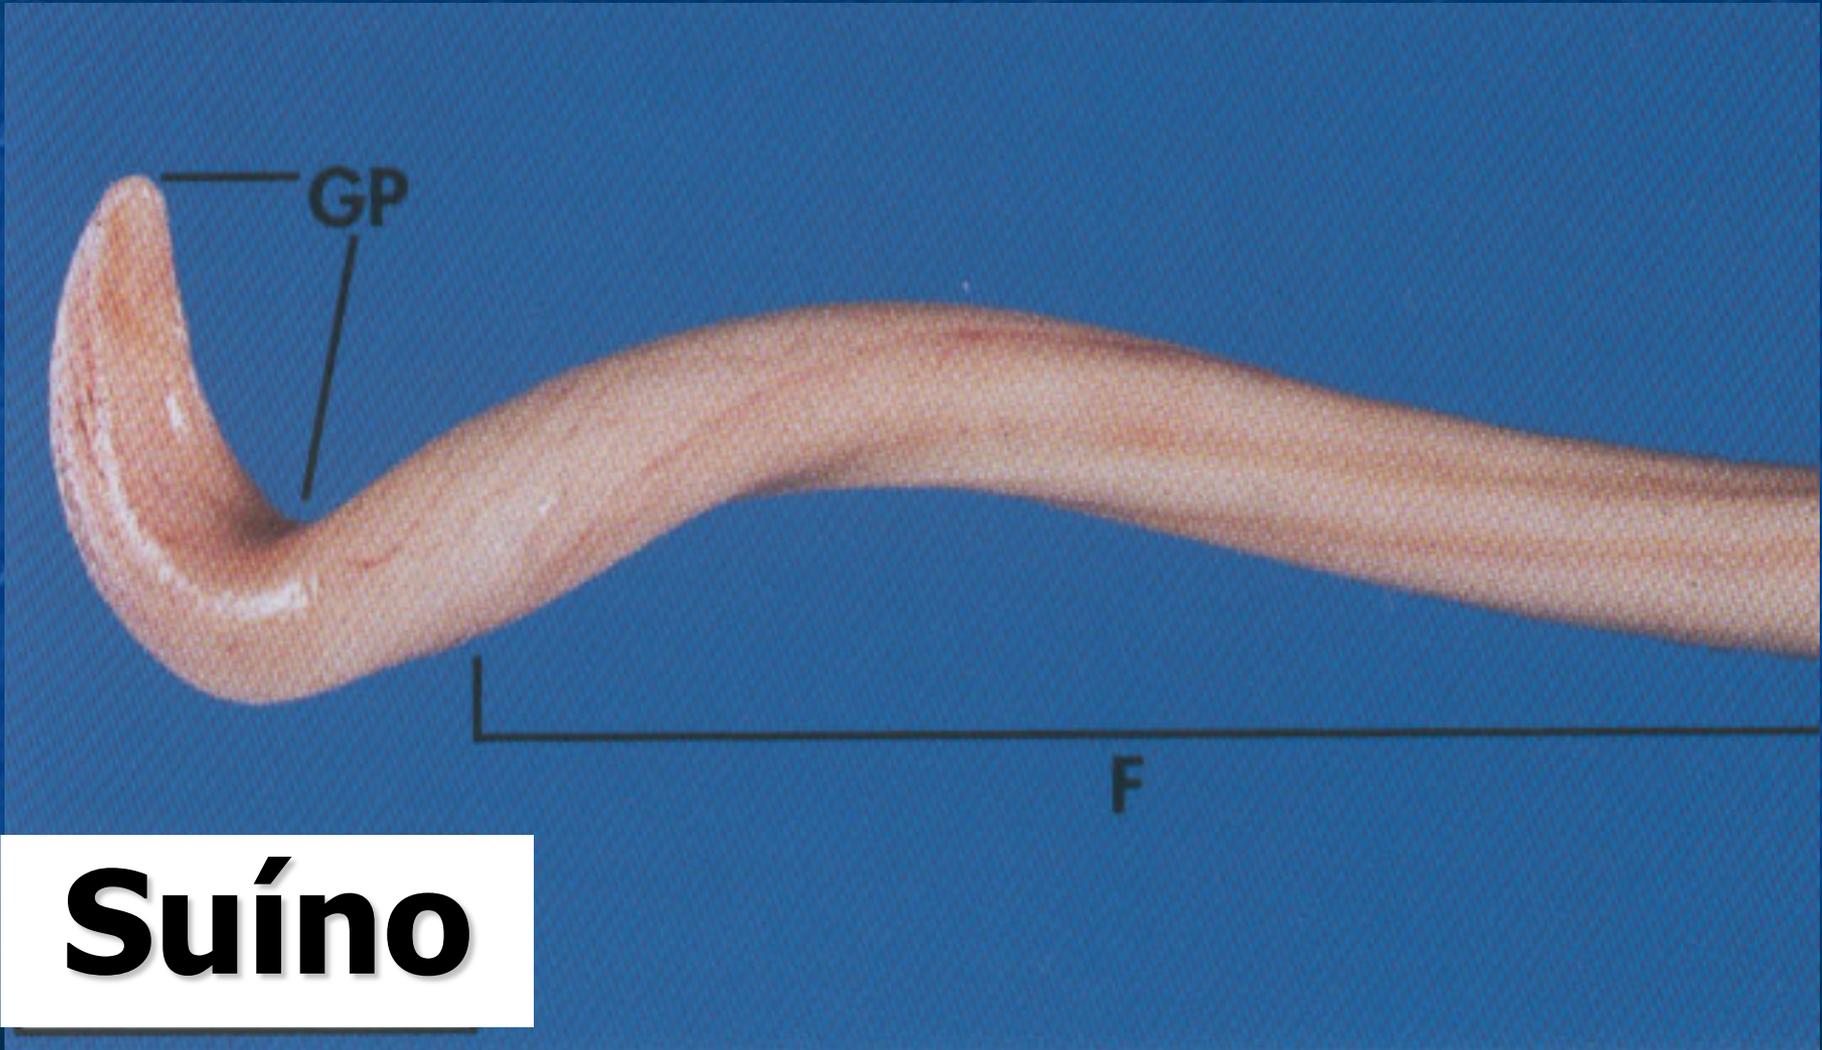

**Bovino**

Lateral View

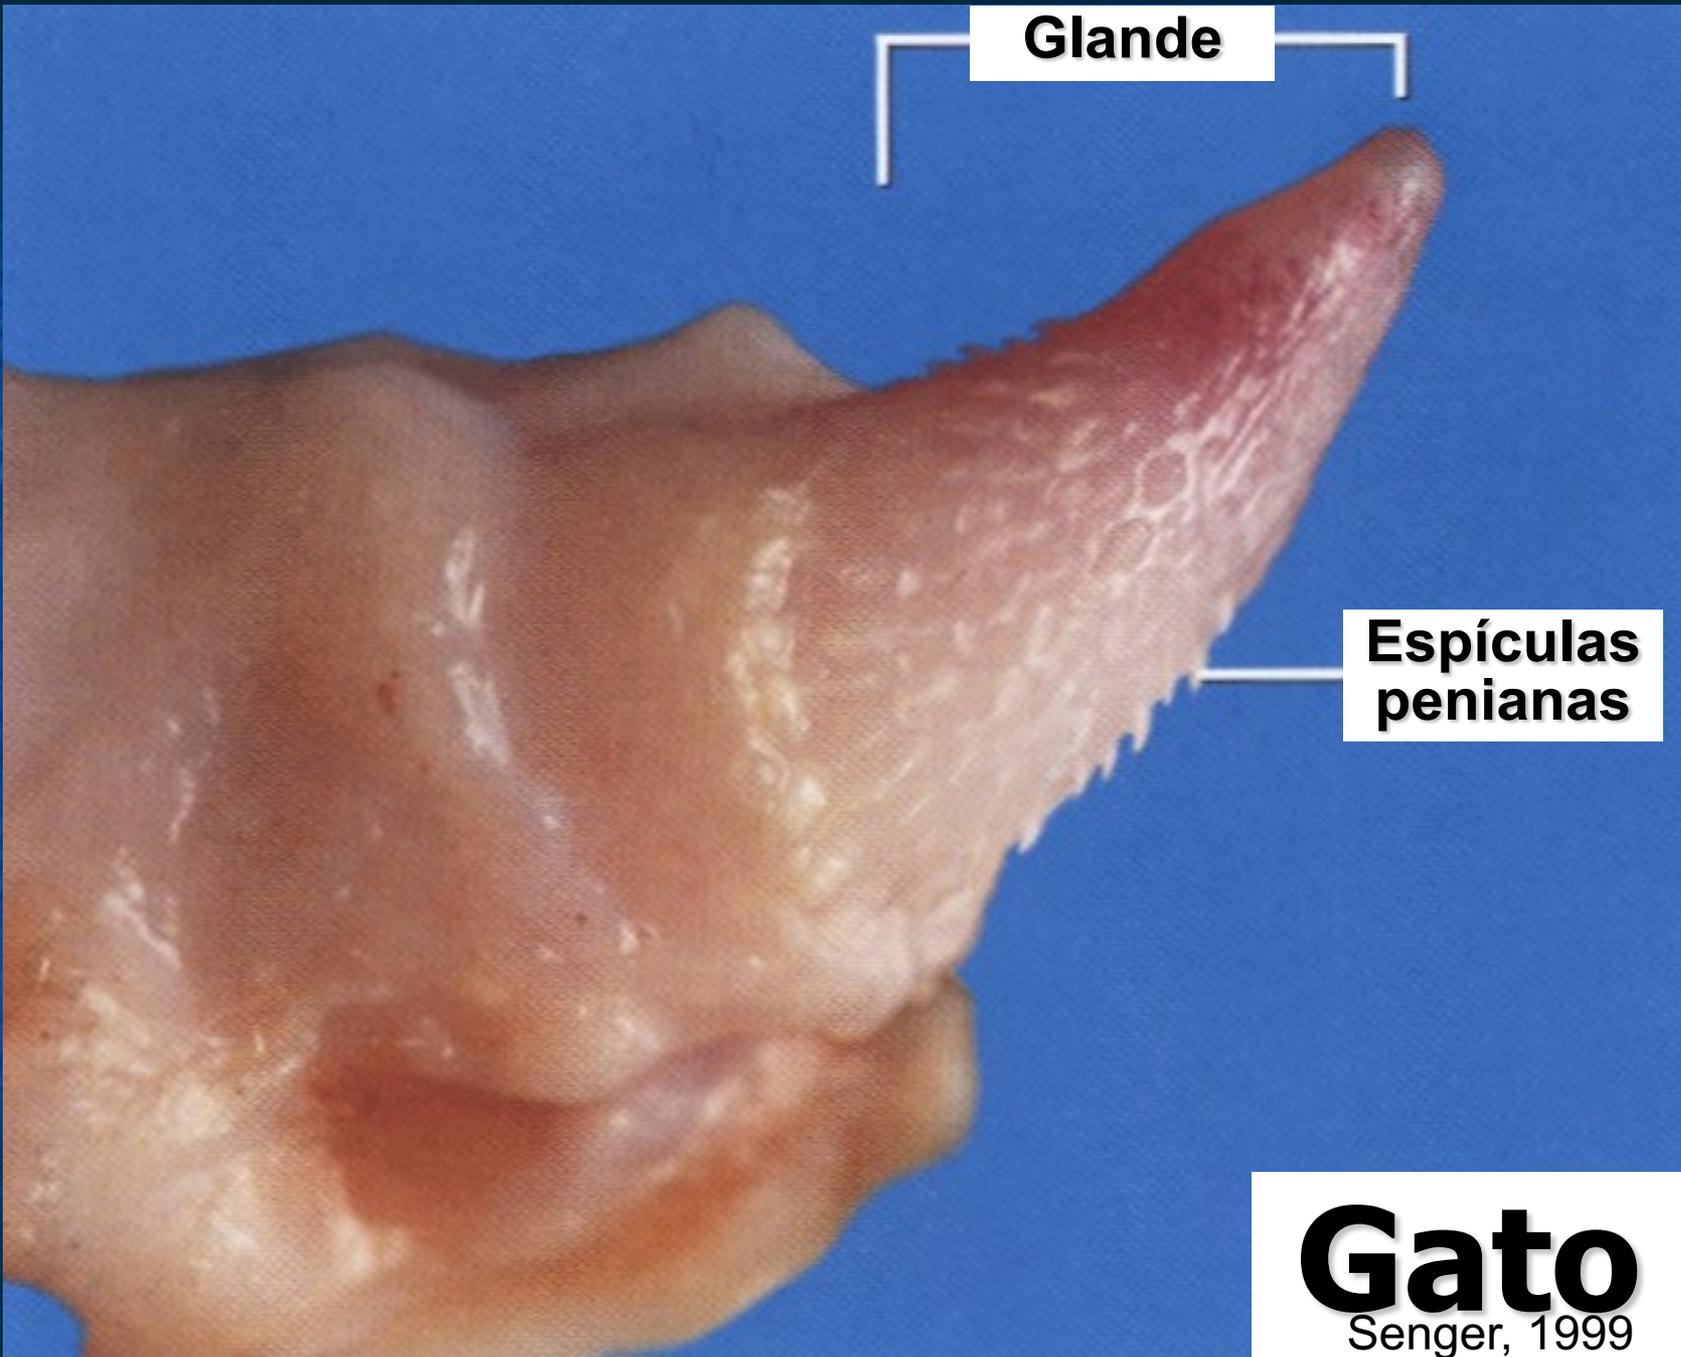

**Cão**

Dorsal View

A close-up photograph of a cat's penis against a blue background. The penis is a pinkish, elongated organ with a textured, scaly surface. A white bracket at the top points to the tip, labeled 'Glande'. A white line on the right side points to the scaly texture, labeled 'Espículas penianas'.

**Glande**

**Espículas  
penianas**

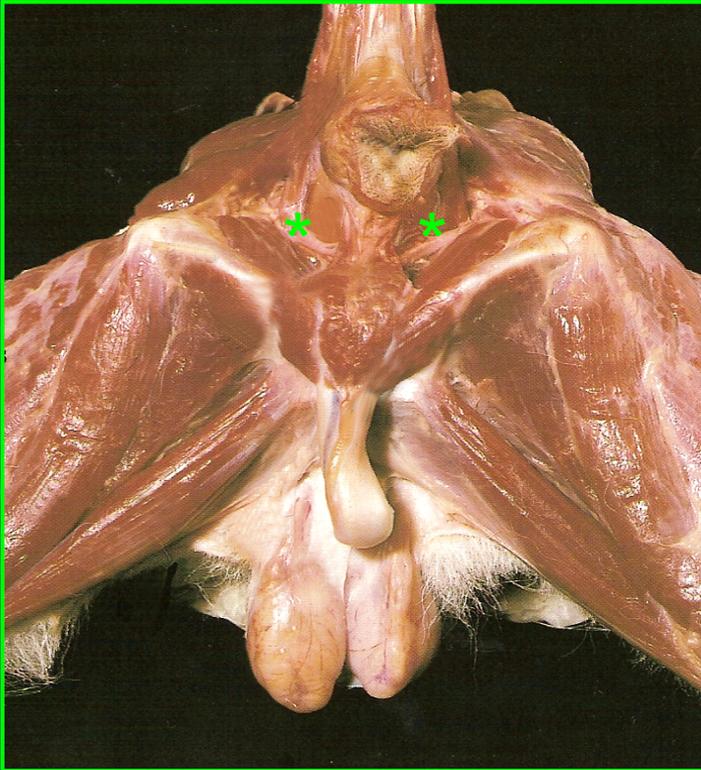

**Gato**  
Senger, 1999

# Pênis

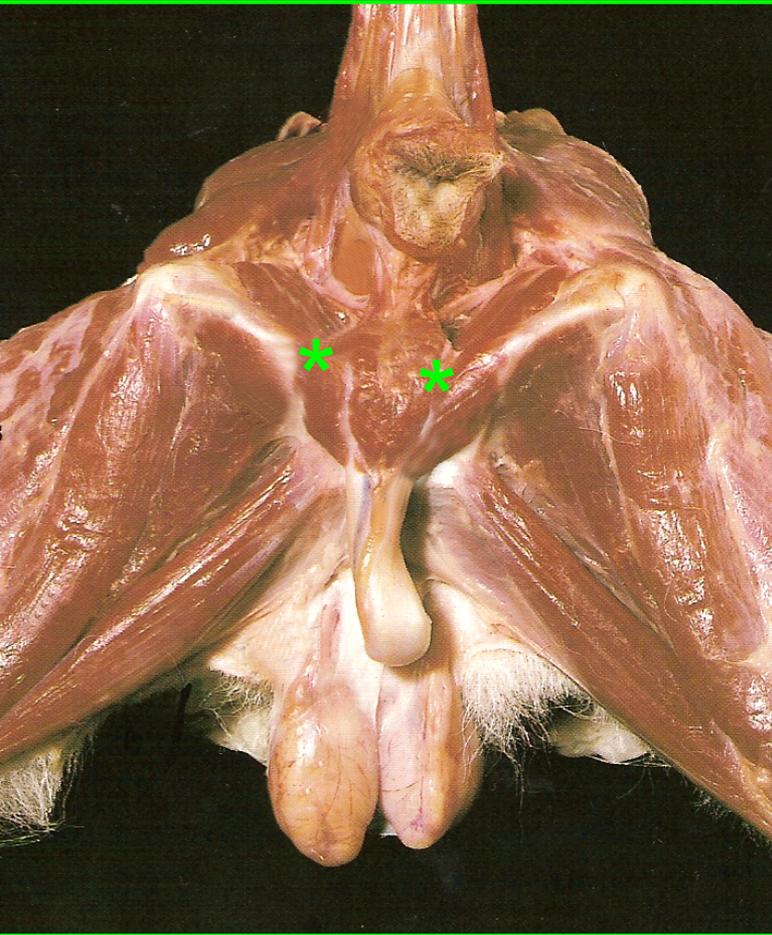

Músculos da raiz do pênis:

## M. Bulbocavernoso:

- ventral ao ânus;
- esvaziar canal uretral pós micção;
- auxiliar na ereção

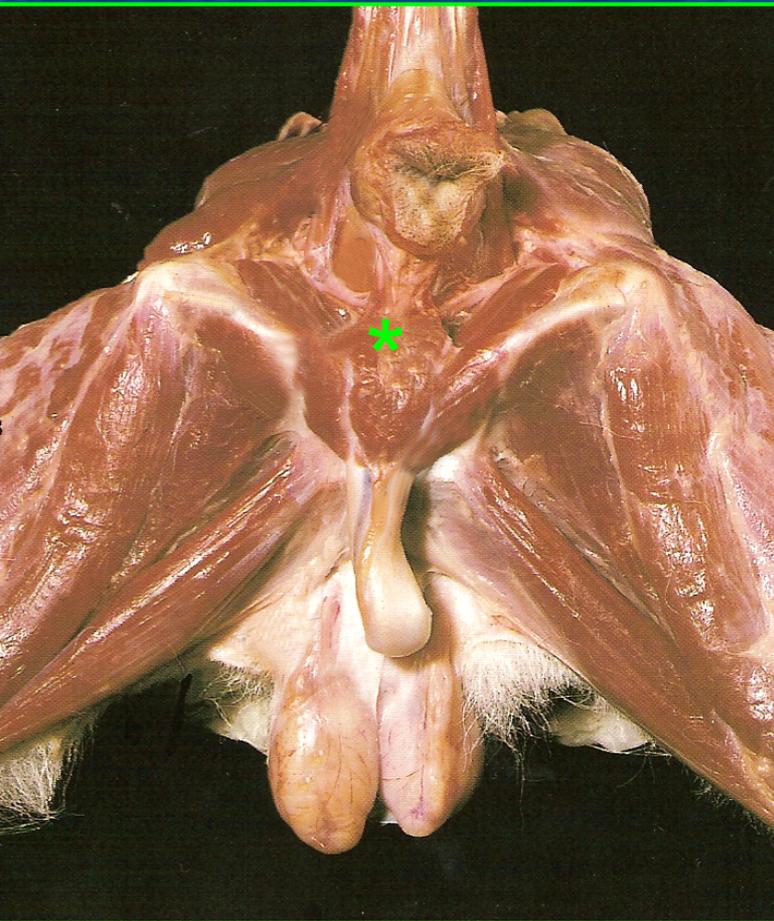

# Pênis

## M. Isquiocavernoso:

- limites do períneo;
- comprime raiz do pênis;
- retarda retorno de sangue pelas Vv. mantendo ereção.

# Pênis

## M. bulboesponjoso:

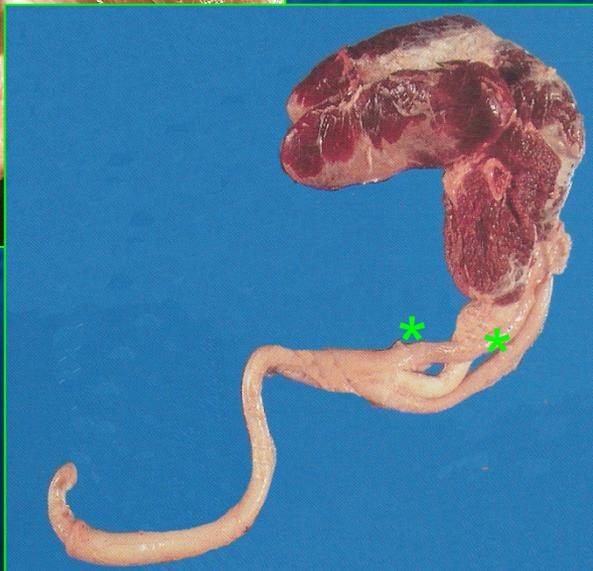

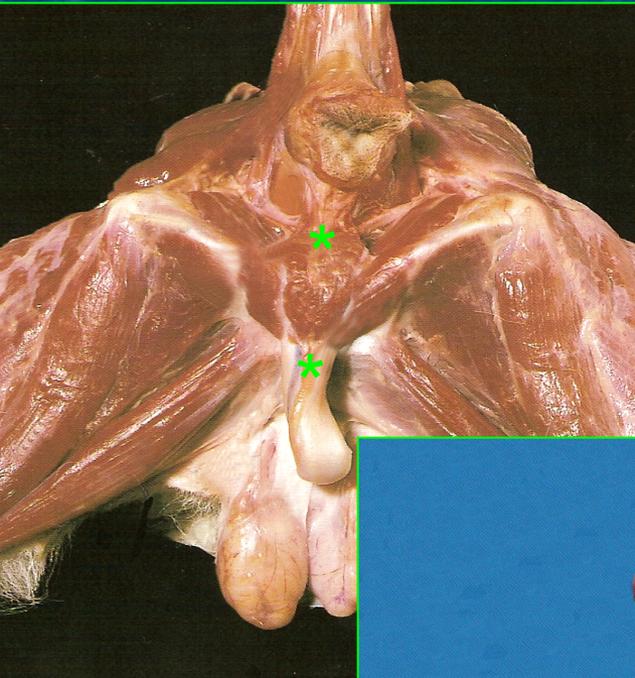

-esvaziar a porção extrapélvica da uretra.

# Pênis

## M. Retrator do pênis :

-comanda a formação da flexura sigmóide;

-Fixado dorsalmente as vértebras caudais e ventro-lateral ao pênis.

# Pênis

## M. Uretral:

- movimentação do plasma seminal;
- movimentação dos sptz na uretra.

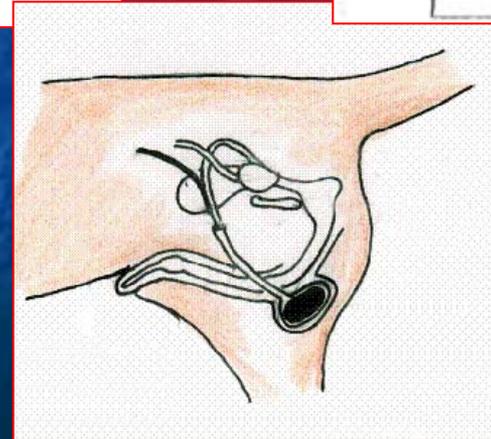

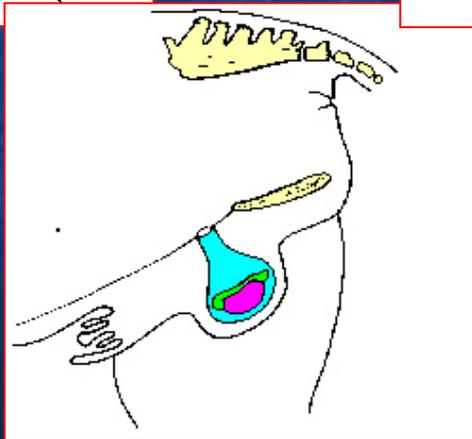

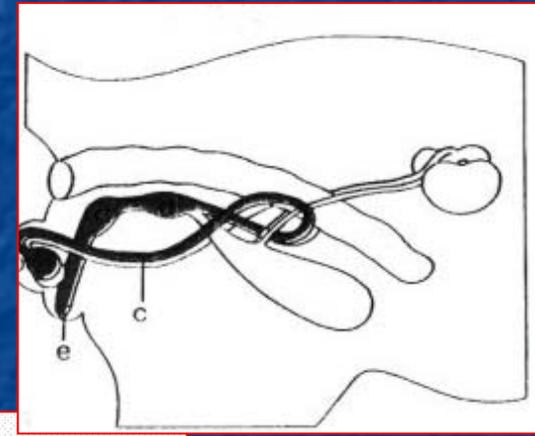

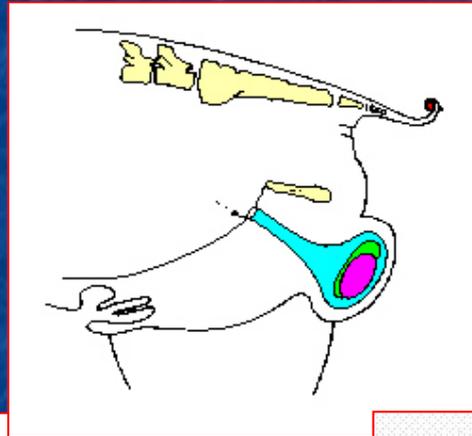

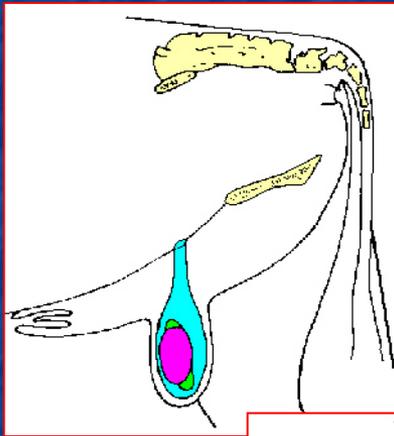

# ESCROTO E PREPÚCIO

## ■ Escroto

### ■ Posição do escroto:

- **Ruminantes:** abaixo da parte caudal do abdome;
- **Suínos e felinos:** perineal;
- **Eqüinos e caninos:** posição intermediária.

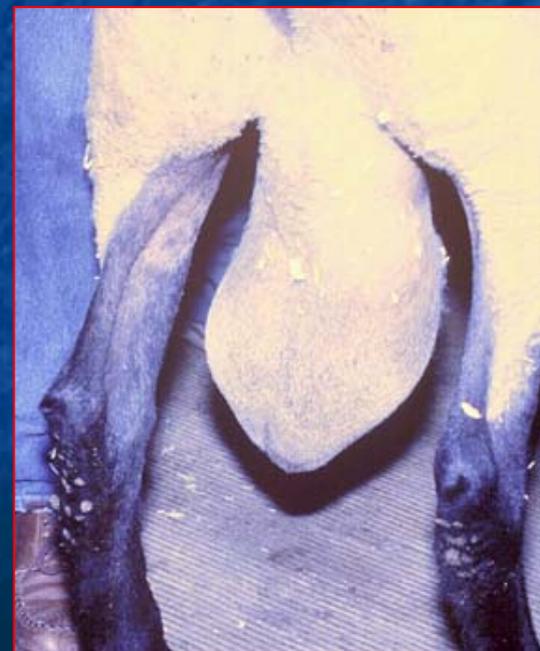

# Posição do escroto:

## ✓ Aspecto externo

Idade

Temperatura ambiente

## ✓ **Estratigrafia do Escroto :**

**Túnica Dartos (M. Liso);**

**Fáscia espermática externa;**

**Fáscia cremastérica (M. Cremaster);**

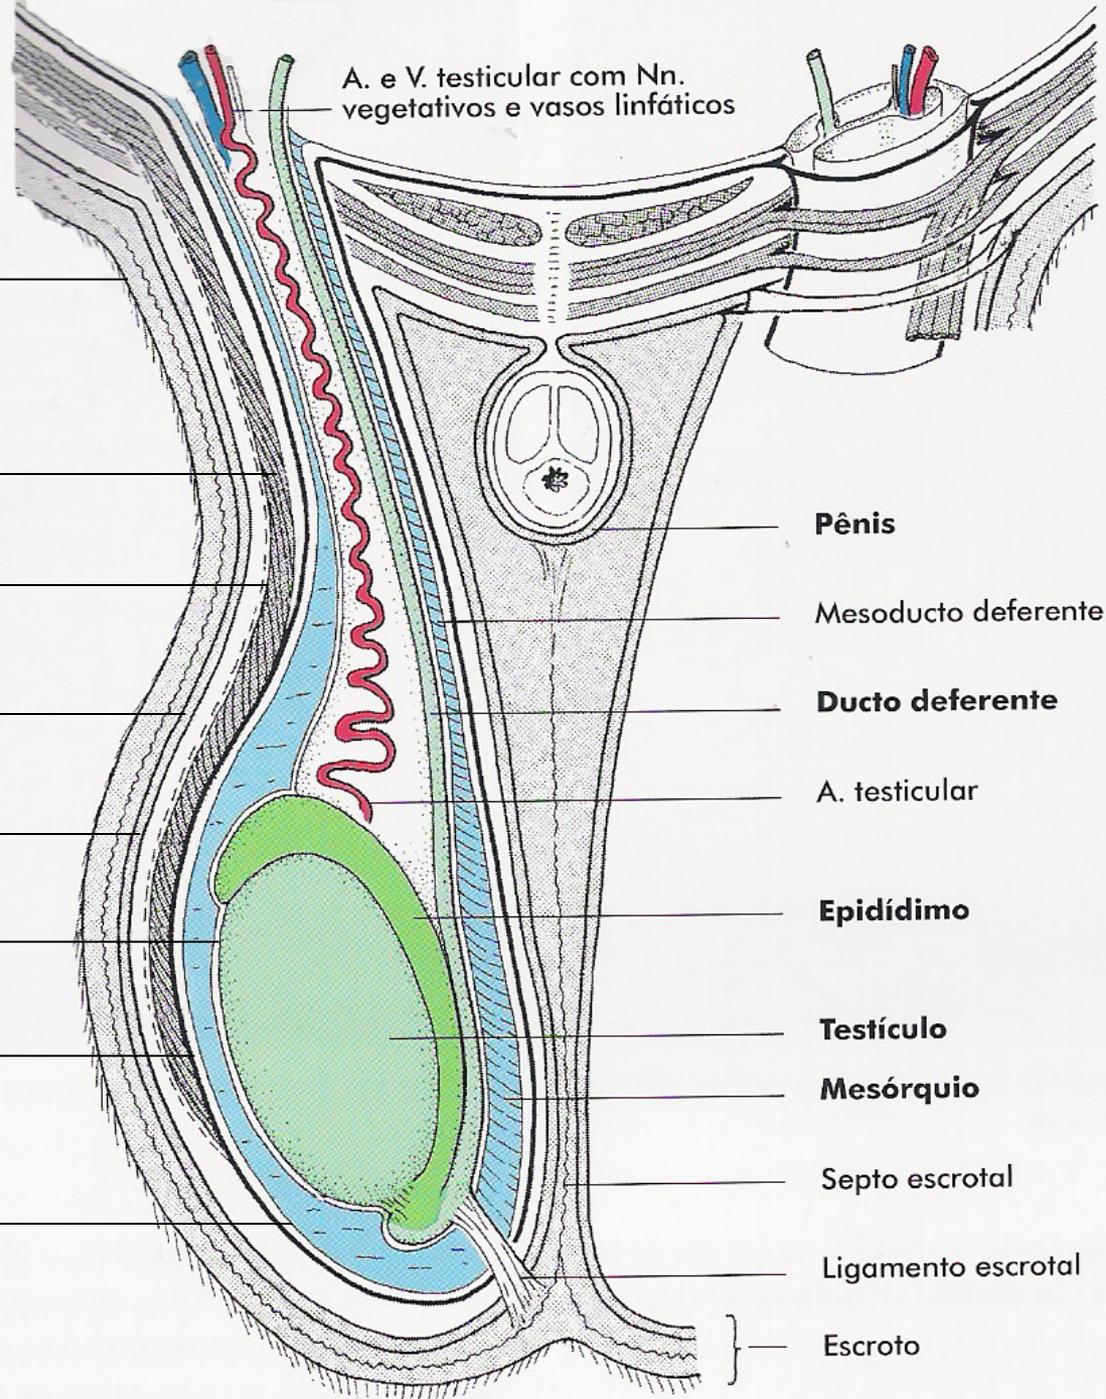

**Fáscia espermática interna;**

**Lâmina parietal da túnica vaginal.**

**\*Lâmina visceral da túnica vaginal;**

**\*Túnica albugínea.**
