## 8-bit PIC<sup>®</sup> Microcontroller Solutions

**World's Smallest Microcontroller**

**High Pin Count High Density Memory**

**Peripheral Rich**

**nanoWatt Technology**

**LCD**

**USB**

**MP3**

**SMOKE ALARM**

**KEELOQ<sup>®</sup> Technology**

The image is a promotional collage for Microchip's PIC microcontrollers. It features a variety of PIC chips (PIC12F, PIC16FXXX, PIC18FXXX, and PIC12F) scattered across the frame. The background is a vibrant, abstract representation of a circuit board with glowing red and blue lines. Several real-world applications of PIC microcontrollers are depicted: a small PIC12F chip labeled 'World's Smallest Microcontroller', a 'GLASS Break SENSOR', a digital clock showing '11:30 PM 72°', a 'HOME SECURITY' keypad with an LCD display, a 'SMOKE ALARM', a 'temp' gauge, and a 'MP3' player. Text overlays highlight key features: 'High Pin Count High Density Memory', 'Peripheral Rich', 'nanoWatt Technology', 'LCD', 'USB', 'MP3', and 'KEELOQ Technology'. The Microchip logo is repeated on several of the chips.

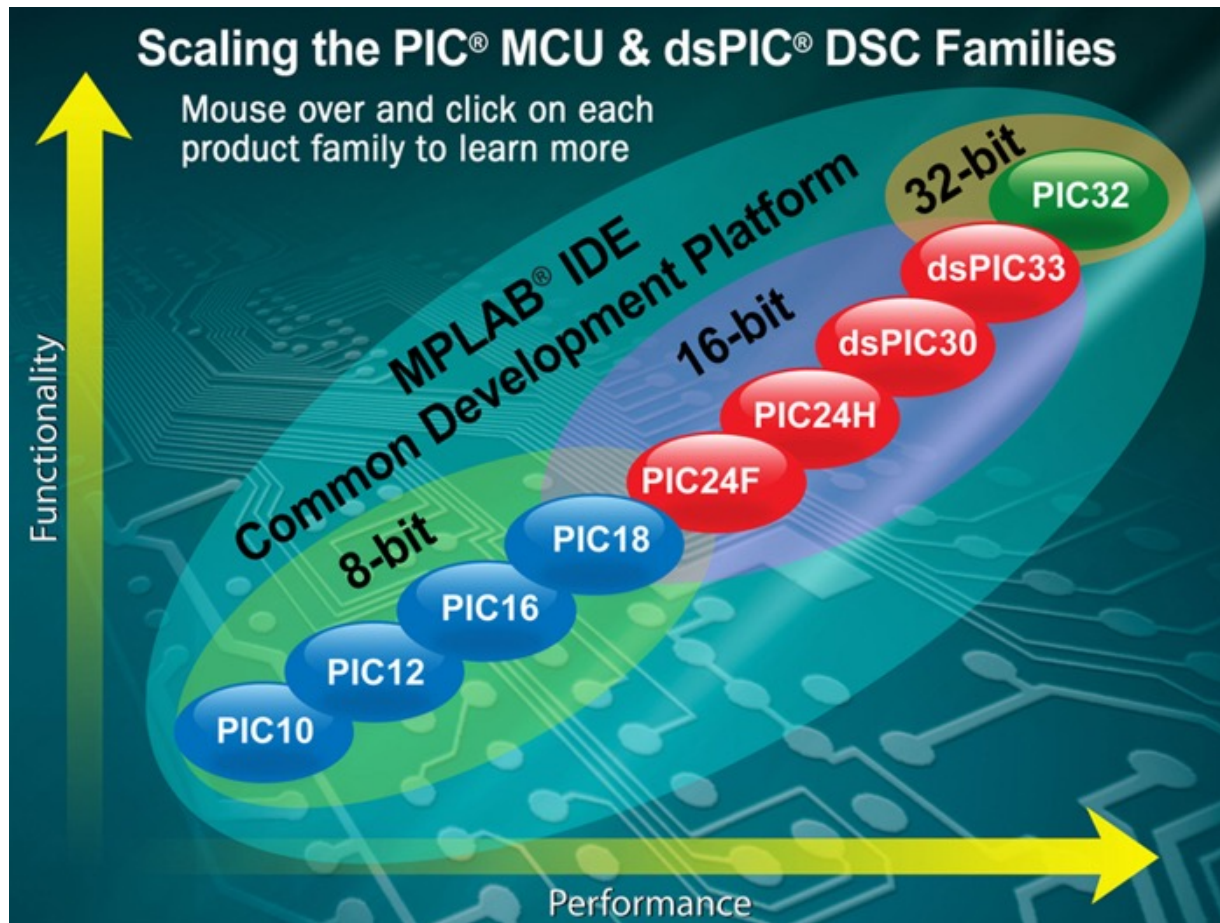

# Microcontroladores PIC

- Aproximadamente 400 modelos de microcontroladores diferentes
- Fácil migração entre eles (compatibilidade de pinos, registradores e código)
- Plataforma de programação gratuita (MPLAB)
- Vários periféricos embutidos em um único chip (USART, USB, LCD, Conv. A/D, PWM, Ethernet)
- PIC: Peripheral Interface Controller
- Set de instruções reduzidos (**RISC**) com alta performance (Arquitetura **Harvard**)

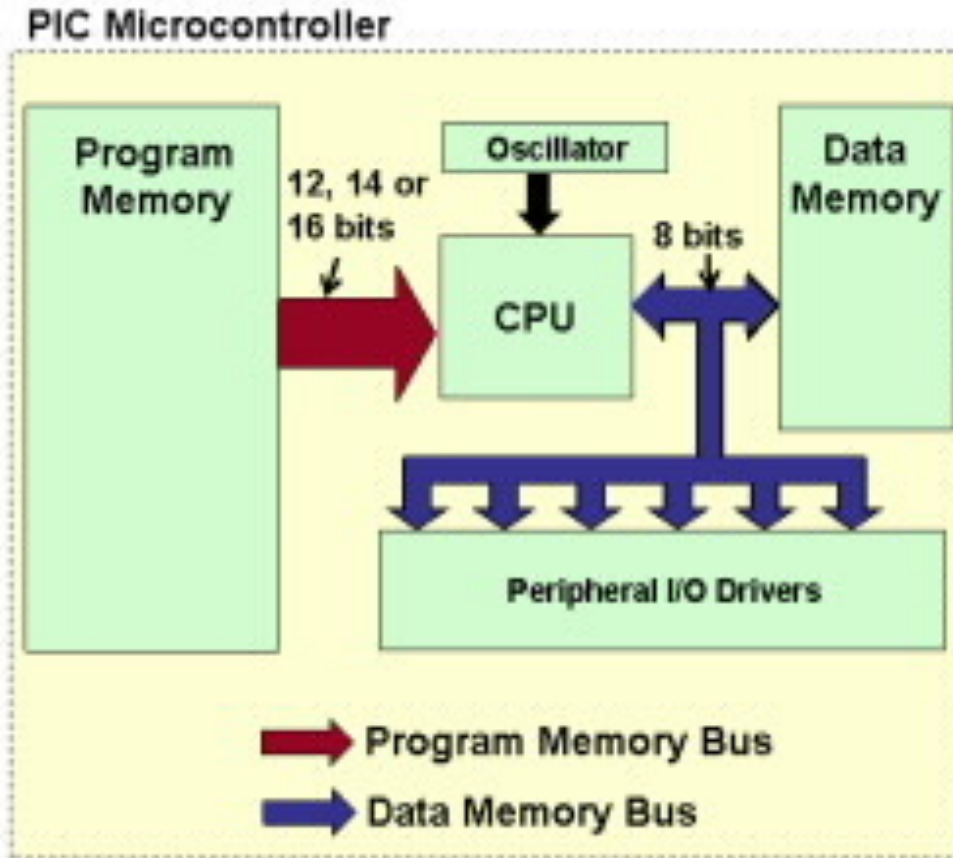

# Família de Microcontroladores PIC

- Microprocessadores de 8-bit, 16-bit e 32-bit;
- A linha de 32-bit possui ULA de 32-bit, clock de até 200 MHz e Pipeline de 5 estágios

# Família PIC de 8-bits

Classificados de acordo com o tamanho do barramento de instruções. Isso define o tamanho da palavra de instruções, o número de instruções e a sua velocidade

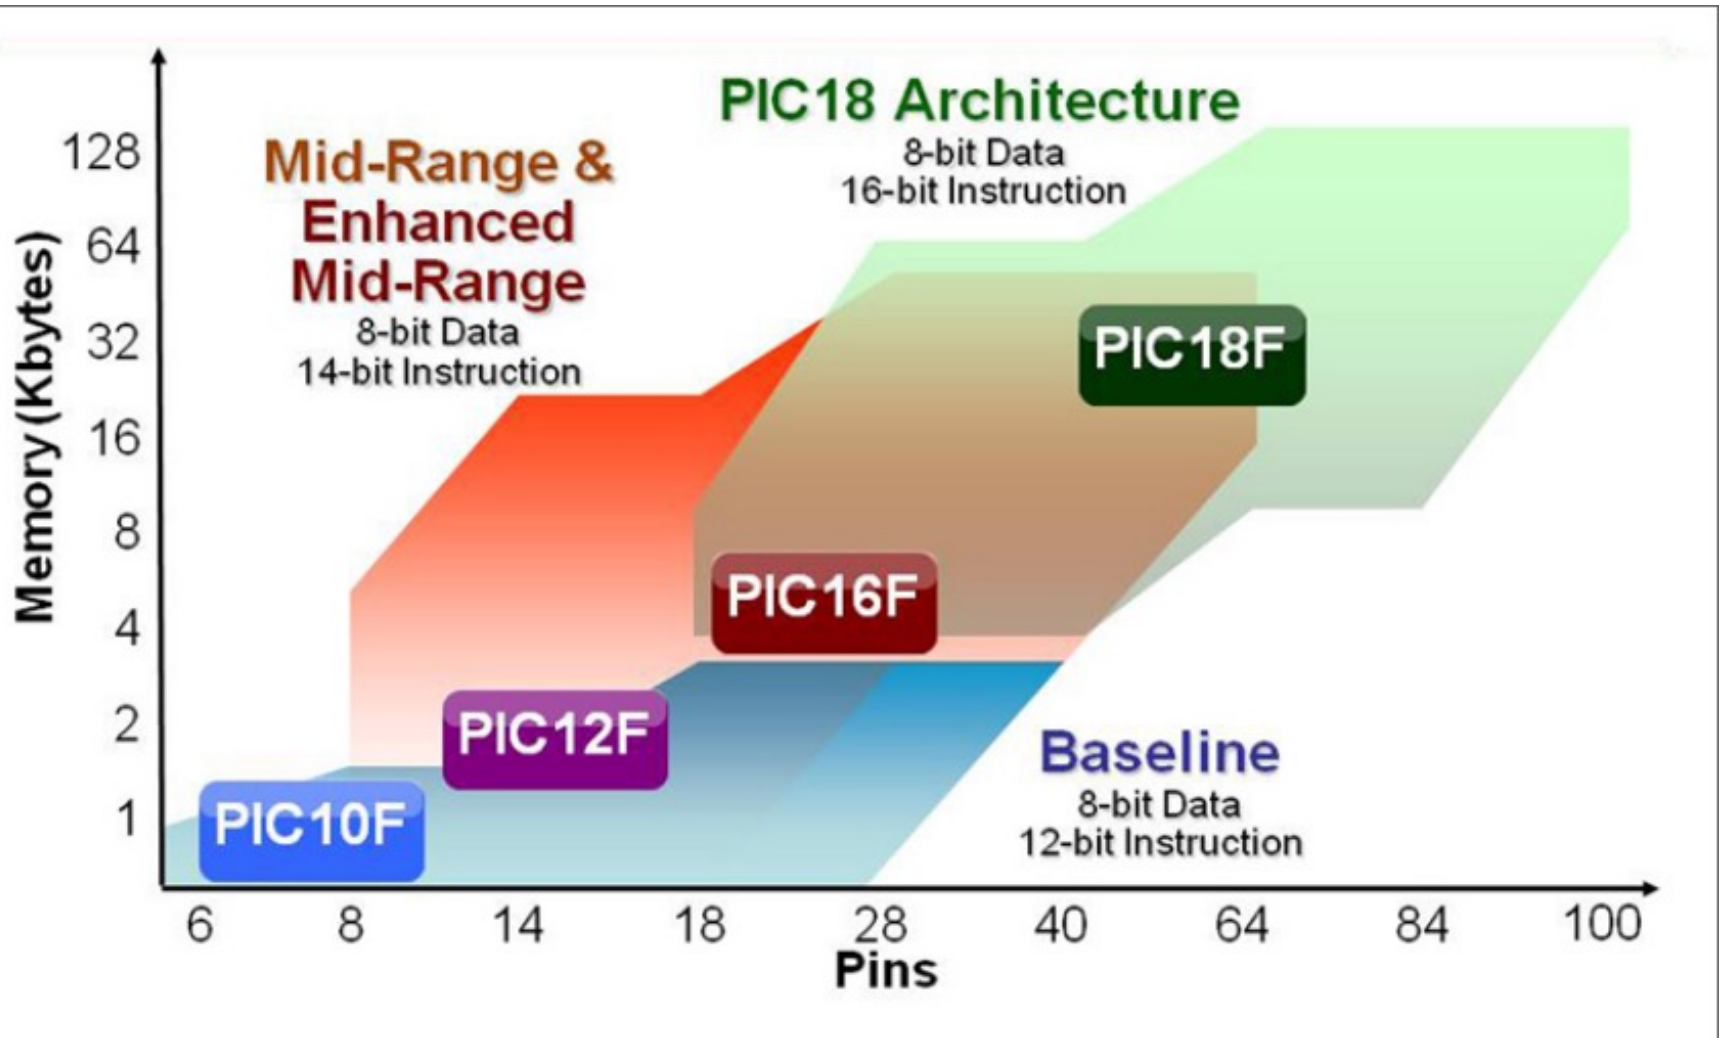

1. Baseline: 12-bits
2. Mid-range: 14-bits
1. Enhanced Mid-range: 14-bits
2. High-performance: 16-bits

# Família PIC de 8-bits

## Compare 8-bit PIC® MCU Architectures

	Baseline Architecture	Mid-Range Architecture	Enhanced Mid-Range Architecture	PIC18 Architecture
Pin Count	6-40	8-64	8-64	18-100
Interrupts	No	Single interrupt capability	Single interrupt capability with hardware context save	Multiple interrupt capability with hardware context save
Performance	5 MIPS	5 MIPS	8 MIPS	Up to 16 MIPS
Instructions	33, 12-bit	35, 14-bit	49, 14-bit	83, 16-bit
Program Memory	Up to 3 KB	Up to 14 KB	Up to 28 KB	Up to 128 KB
Data Memory	Up to 138 Bytes	Up to 368 Bytes	Up to 1,5 KB	Up to 4 KB
Hardware Stack	2 level	8 level	16 level	32 level
Features	<ul style="list-style-type: none"> <li>▪ Comparator</li> <li>▪ 8-bit ADC</li> <li>▪ Data Memory</li> <li>▪ Internal Oscillator</li> </ul>	In addition to Baseline: <ul style="list-style-type: none"> <li>▪ SPI/I<sup>2</sup>C™</li> <li>▪ UART</li> <li>▪ PWMs</li> <li>▪ LCD</li> <li>▪ 10-bit ADC</li> <li>▪ Op Amp</li> </ul>	In addition to Mid-Range: <ul style="list-style-type: none"> <li>▪ Multiple Communication Peripherals</li> <li>▪ Linear Programming Space</li> <li>▪ PWMs with Independent Time Base</li> </ul>	In addition to Enhanced Mid-Range: <ul style="list-style-type: none"> <li>▪ 8x8 Hardware Multiplier</li> <li>▪ CAN</li> <li>▪ CTMU</li> <li>▪ USB</li> <li>▪ Ethernet</li> <li>▪ 12-bit ADC</li> </ul>
Highlights	Lowest cost in the smallest form factor	Optimal cost to performance ratio	Cost effective with more performance and memory	High performance, optimized for C programming, advanced peripherals
Total Number of Devices	16	58	29	193
Families	PIC10, PIC12, PIC16	PIC12, PIC16	PIC12FXXX, PIC16F1XX	PIC18

# Família PIC de 8 Bits

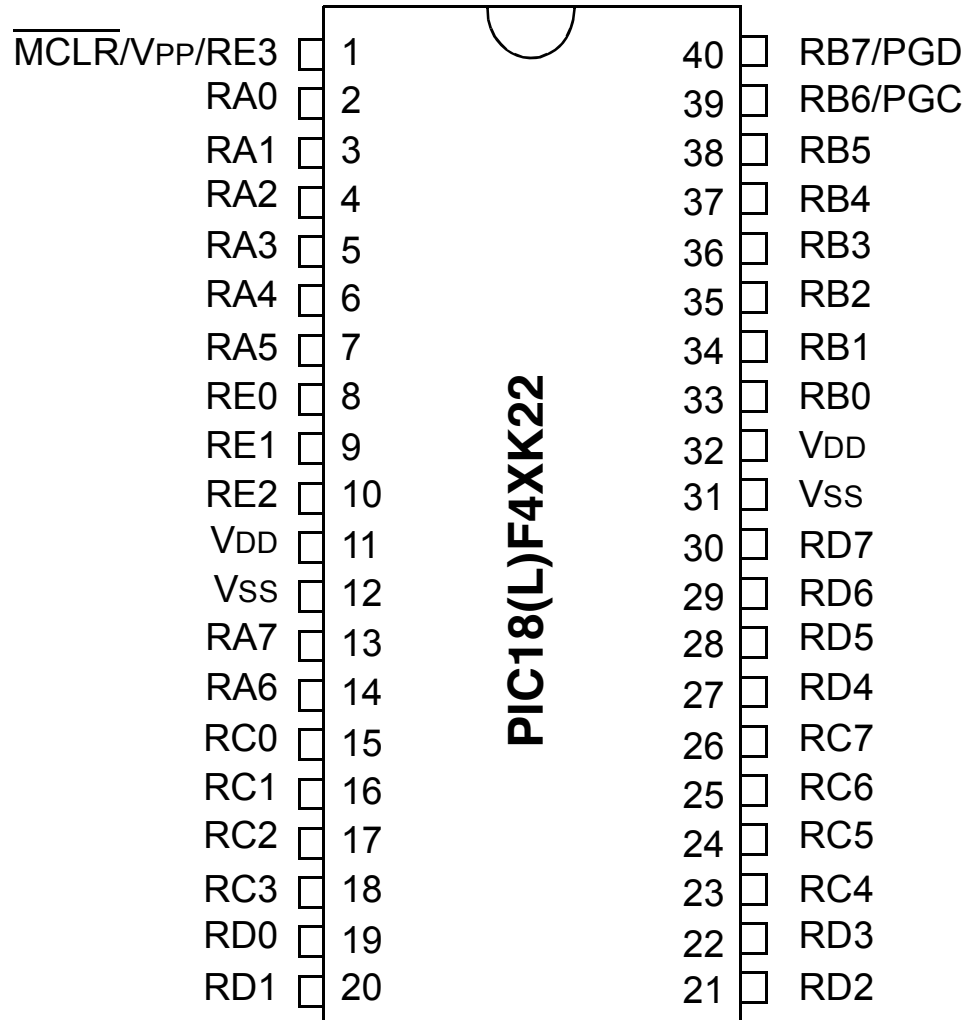

**PIC 18F45K22**

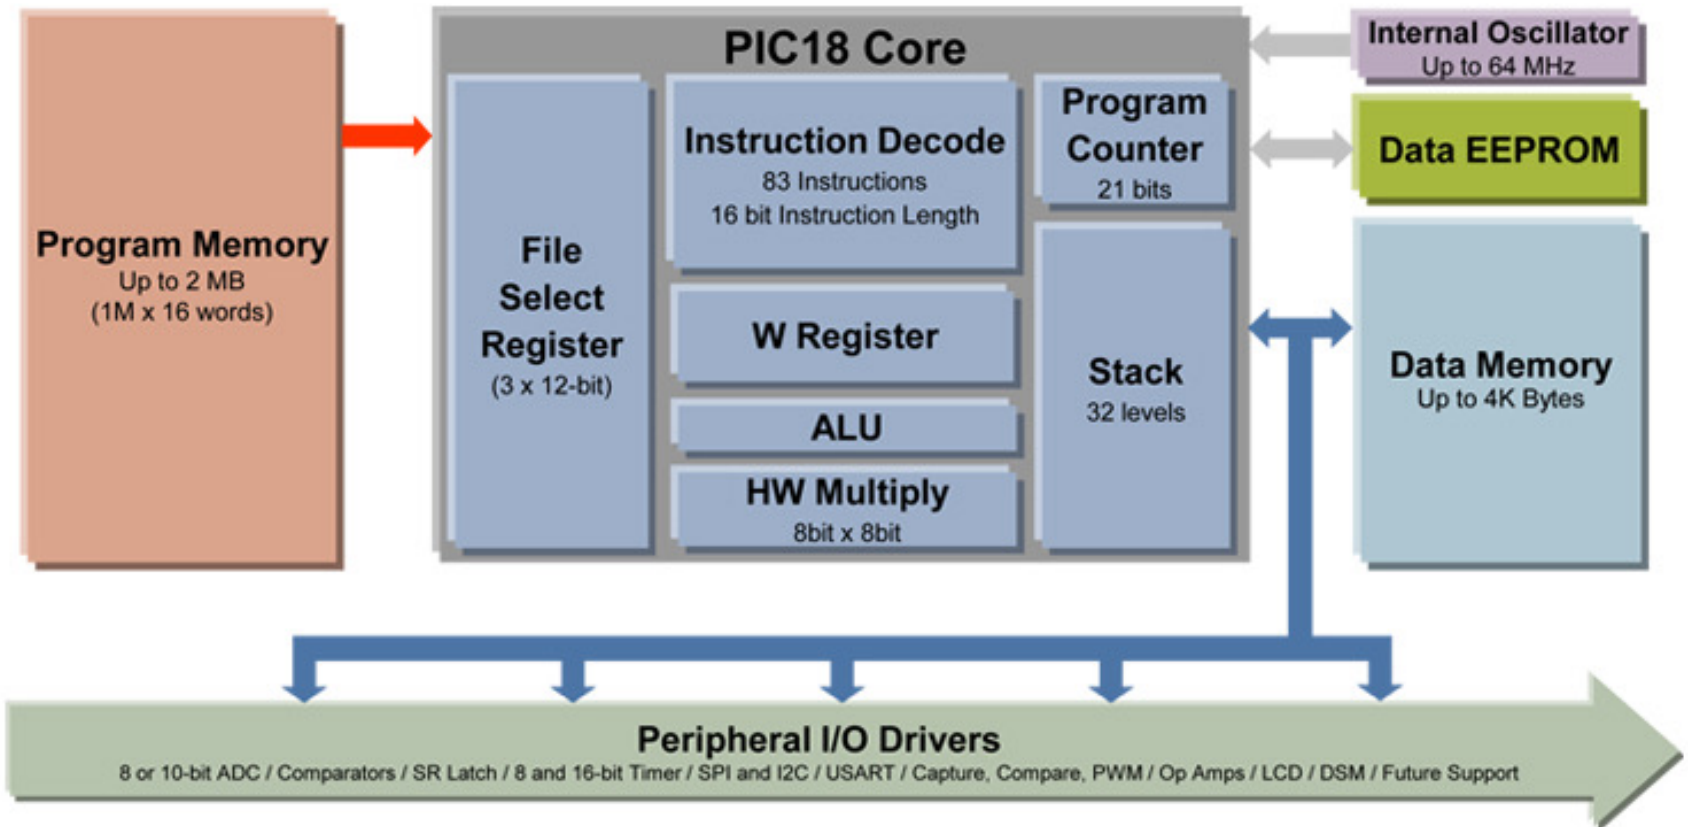

# PIC 18F45K22

- Memória de Instruções de 16K x **16 bits** (High-Performance) – FLASH – 32KB
- Memória de dados (SRAM) com 1,5 Kbytes de uso geral – endereçamento de 12 bits (4096 bytes) divididos em 16 bancos de 256 bytes cada;
- 40 pinos – 35 portas de I/O configuráveis como entrada ou saída;
- Memória adicional interna do tipo EEPROM não volátil de 256bytes;
- 34 fontes de interrupções diferentes com 2 níveis de prioridade;
- Programação com 75 instruções (otimizadas para C)
- Frequência máxima de operação de até 40 MHz (10 MIPS)
- Pilha (*Stack*) de 31 posições;
- Periféricos: 7 Timers, PWM, Conversor A/D e D/A, USART, etc...
- Multiplicador 8 x 8 de um ciclo de máquina.

# PIC 18F45K22

# Memória de Programa

# Memória RAM

FIGURE 5-7: DATA MEMORY MAP FOR PIC18(L)F25K22 AND PIC18(L)F45K22 DEVICES

- Memória de dados de 2K x 8 bits;
- Endereçado por duto de 12 bits (4096 bytes);
- 16 bancos de 256 bytes cada;
- Registrador BSR para seleção do banco:
  - 4 bits do BSR (MSB)
  - 8 bits da instrução (LSB)
- 256 bytes de acesso direto (0 e 15)
  - (GPR + SFR)
- Seleção na instrução se o acesso é direto (a = 0) ou via banco (a = 1).

# SFR

- Note**
- 1: This is not a physical register.
  - 2: Unimplemented registers are read as '0'.
  - 3: PIC18(L)F4XK22 devices only.
  - 4: PIC18(L)F26K22 and PIC18(L)F46K22 devices only.

# Conversor A/D

# 10 bits - 30 canais multiplexados

FIGURE 17-1: ADC BLOCK DIAGRAM

# Equações

$$\text{Resolução} = \frac{V_{ref+} - V_{ref-}}{2^n - 1}$$

$$V_{Analógica} = \frac{\text{Valor binário} \cdot (V_{ref+} - V_{ref-}) + V_{ref-} \cdot (2^n - 1)}{2^n - 1}$$

$$V_{Analógica(V_{ref-}=0)} = \frac{\text{Valor binário} \cdot V_{ref}}{2^n - 1}$$

# Portas I/O

# Portas de I/O

---

Definir se é entrada ou saída (TRISA, TRISB, etc.);

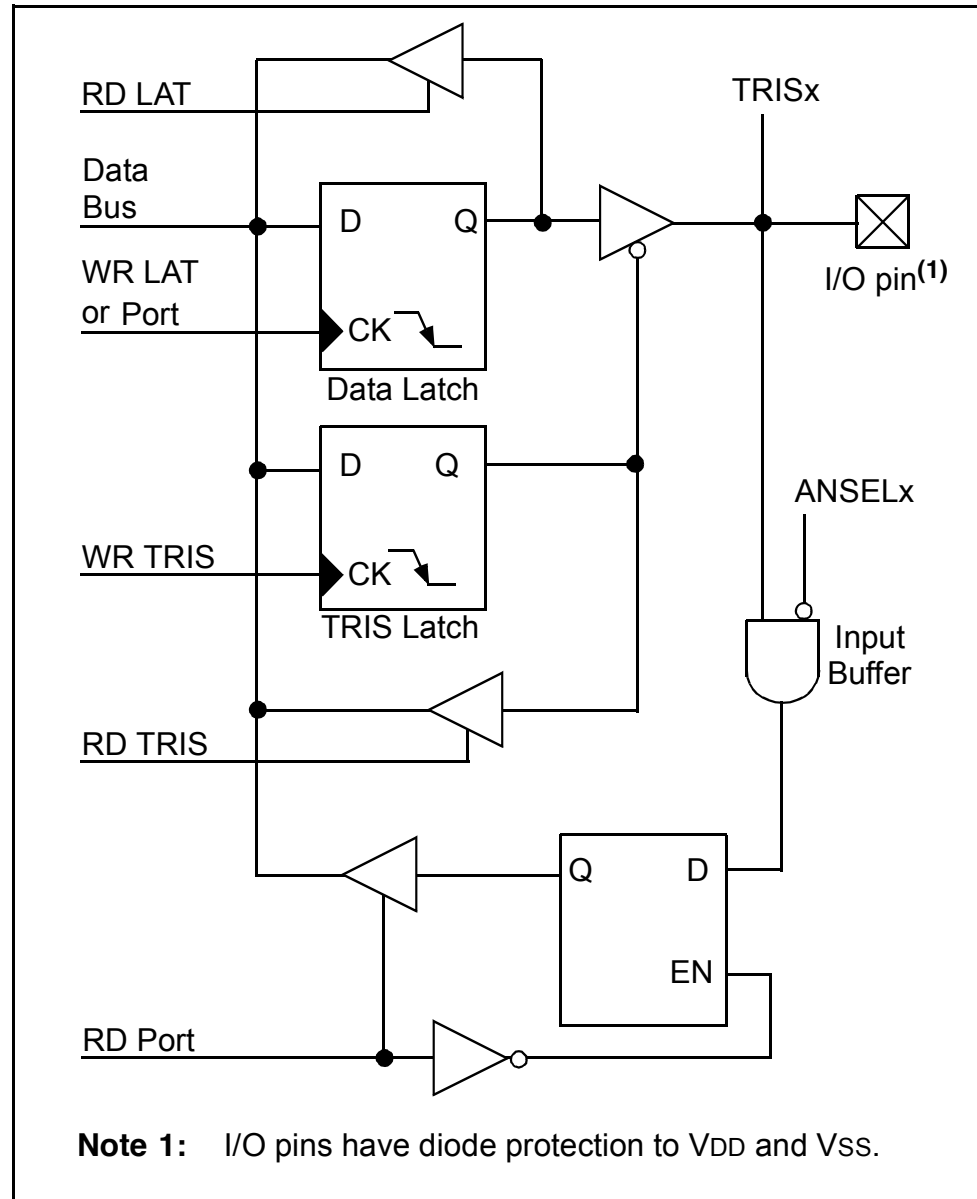

Quando for escrever na porta (saída), usar os registradores LATA, LATB, etc.

Quando for ler o estado de um pino (entrada), usar os registradores PORTA, PORTB, etc.

Definir se a porta é analógica ou digital, devido ao conversor A/D (ANSELA, ANSELB, etc..)

# Portas de I/O

# Módulo CCP

# Módulo CCP

- CCP = Capture, Compare, PWM;
- Periférico presente em alguns microcontroladores PIC
- Modo Capture: contagem de tempo entre dois eventos ocorridos no pino do PIC (borda de descida ou subida)
- Modo Compare: contagem de tempo entre dois eventos ocorridos no pino do PIC e comparação com um valor pré determinado
- Modo PWM: geração de um pulso PWM no pino do PIC
- Pode gerar interrupção
- Utiliza os temporizadores do PIC para geração da base de tempo:

CCP/ECCP Mode	Timer Resource
Capture Compare PWM	Timer1 or Timer3 Timer1 or Timer3 Timer2

# PWM

- *Pulse Width Modulation* = Modulação por largura de pulso
- Onda de frequência constante mas com largura de pulso variável (ciclo de trabalho ou *duty cycle*)
- Obtenção de uma tensão analógica a partir de um sinal digital (conversor D/A)

# PWM

- Uso um filtro passa baixa com frequência de corte menor do que a frequência do PWM

$$f_c = \frac{1}{2\pi RC}$$

**FIM**
