# SISTEMA DE IGNIÇÃO

Sistema de Ignição
Figure 2-15. A one-piece integral suppressor reduces RF interference.
Figure 3.9 In-cylinder pressure p over crankshaft angle α_{CS}.

$$w_i = \frac{1}{V_d} \sum_{j=1}^{CYL} \oint \Big(p_j(V_j) - p_0 \Big) dV_j \quad , \qquad\qquad ($$
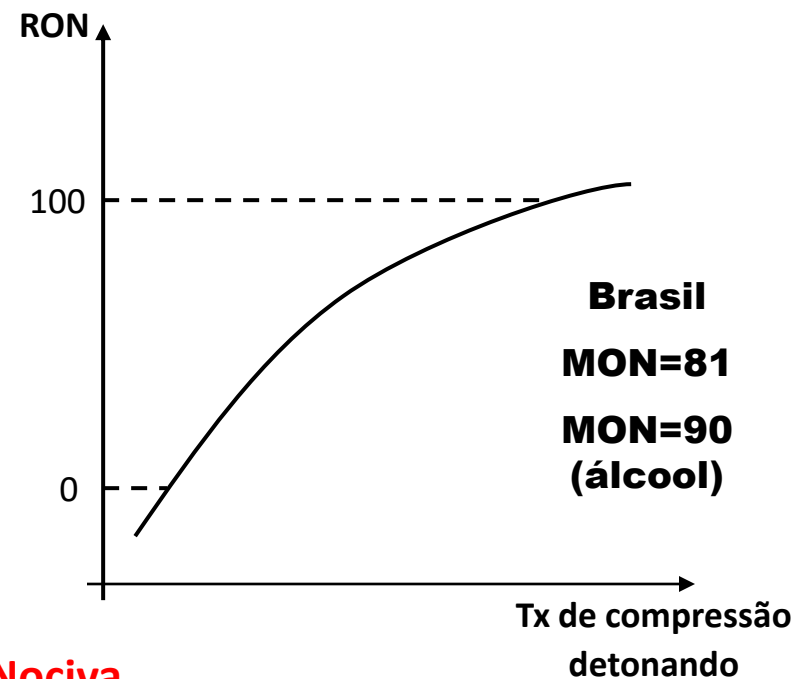

where:

$V_d = CYL \cdot (V_1 - V_2)$ is the displacement volume of all cylinders
CYL is the number of cylinders
w_i is the (normalised) **indicated specific work.**

Requisito de Ignição, com RPM=Cte

Início de Detonação (LDI) com comb. baixa octanagem

Início de Detonação (LDI) com comb. alta octanagem

Taxa Alta

Taxa Baixa

Há pouca vantagem em torque

Torque no Eixo

Avanço de Ignição
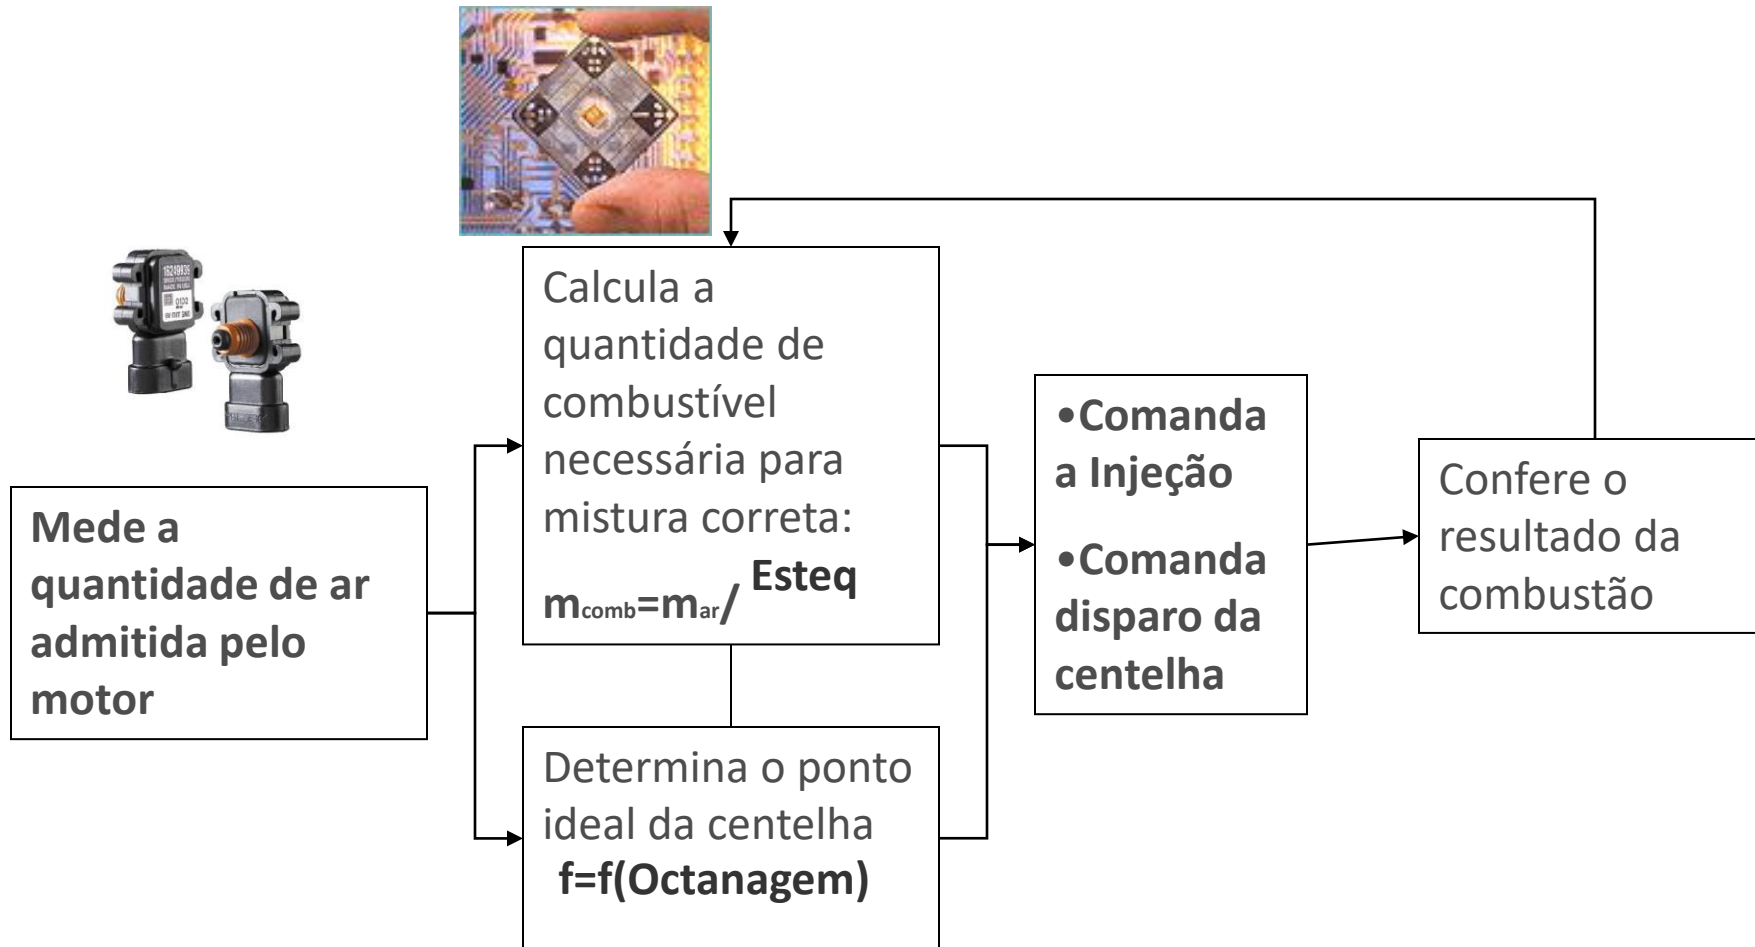

Requisito de Ignição, com RPM=Cte

Requisito de Ignição, com RPM=Cte

# Esquema Simplificado do Sistema de Gerenciamento:

Mede a quantidade de ar admitida pelo motor

Calcula a quantidade de combustível necessária para mistura correta:

$m_{comb} = m_{ar} /$ **Esteq**

Determina o ponto ideal da centelha **f=f(Octanagem)**

•**Comanda a Injeção**

•**Comanda disparo da centelha**

Confere o resultado da combustão

3.5.2.2 High Value Ignition Performance

Measurement Description	Typical Value	
Energy (mJ)	70	#
Peak secondary current (mA)	74	#
Secondary voltage available (kV)	32.0	*
Spark duration (mS)	2.6	#
Secondary resistance (Ohm)	5800	
Primary resistance (Ohm)	0.20	
Primary charge time @ 14V (mS)	2.50	
Weight (gr)	600	
Primary Current (A)	9.20	
Sample Availability	production	

= 800 Volt Zenor test, no secondary load.

* = with 50 PF Secondary Load

Table 3-1. High Voltage Ignition System Specifications.

Measurement Description	Typical Value	
Energy (mJ)	69	
Peak secondary current (mA)	97	
Secondary voltage available (kV)	37	*
Spark duration (mS)	1.1	
Secondary resistance (Ohm)	5100	
Primary resistance (Ohm)	0.50	
Primary charge time @ 14V (mS)	2.6	
Weight (gr)	950	
Primary Current (A)	9.5	
Sample Availability	current	

= 1500 Volt Zener test with no secondary load.
* = with 50 PF Secondary Load

Table 3-2. I.C.E. Specifications.

Segunda geração de bobinas integradas e eletrônicas

- Metade do numero de drivers de bobinas.

- Redução do tamanho e massa.

- Redução das emissões RFI.

- Núcleo de ferro, encapsulado.

- Uma bobina para cada par de cilindro.

- O potencial é distribuído para a vela através de cabos.
