

Building “Cloudy” Apps

OpenStack Summit April 2013 - Portland, Oregon

The End

1 Enable Scaling

2 Expect Failure

Know Your Audience

- How many of you are attending your **first** OpenStack Summit?
- How many of you have attended a **Rackspace Training** class before?
- How many of you know which **track** this talk is listed under?
- How many of you are just **getting started** with OpenStack?
- How many of you are **Developers**?
- How many of you are **Operators**?
- How many of you are **both**?
- How many of you are **neither**?
- How many of you consider yourself to be **technical**?
- How many of you have access to a working **OpenStack Cluster**?
- How many of you know **what** OpenStack is?
- How many of you know which **projects** make up OpenStack?
- How many of you have ever written a **production application** for the cloud?
- How many of you remember the **end** of my talk?

Dealing with Failure

OpenStack in 60 Seconds

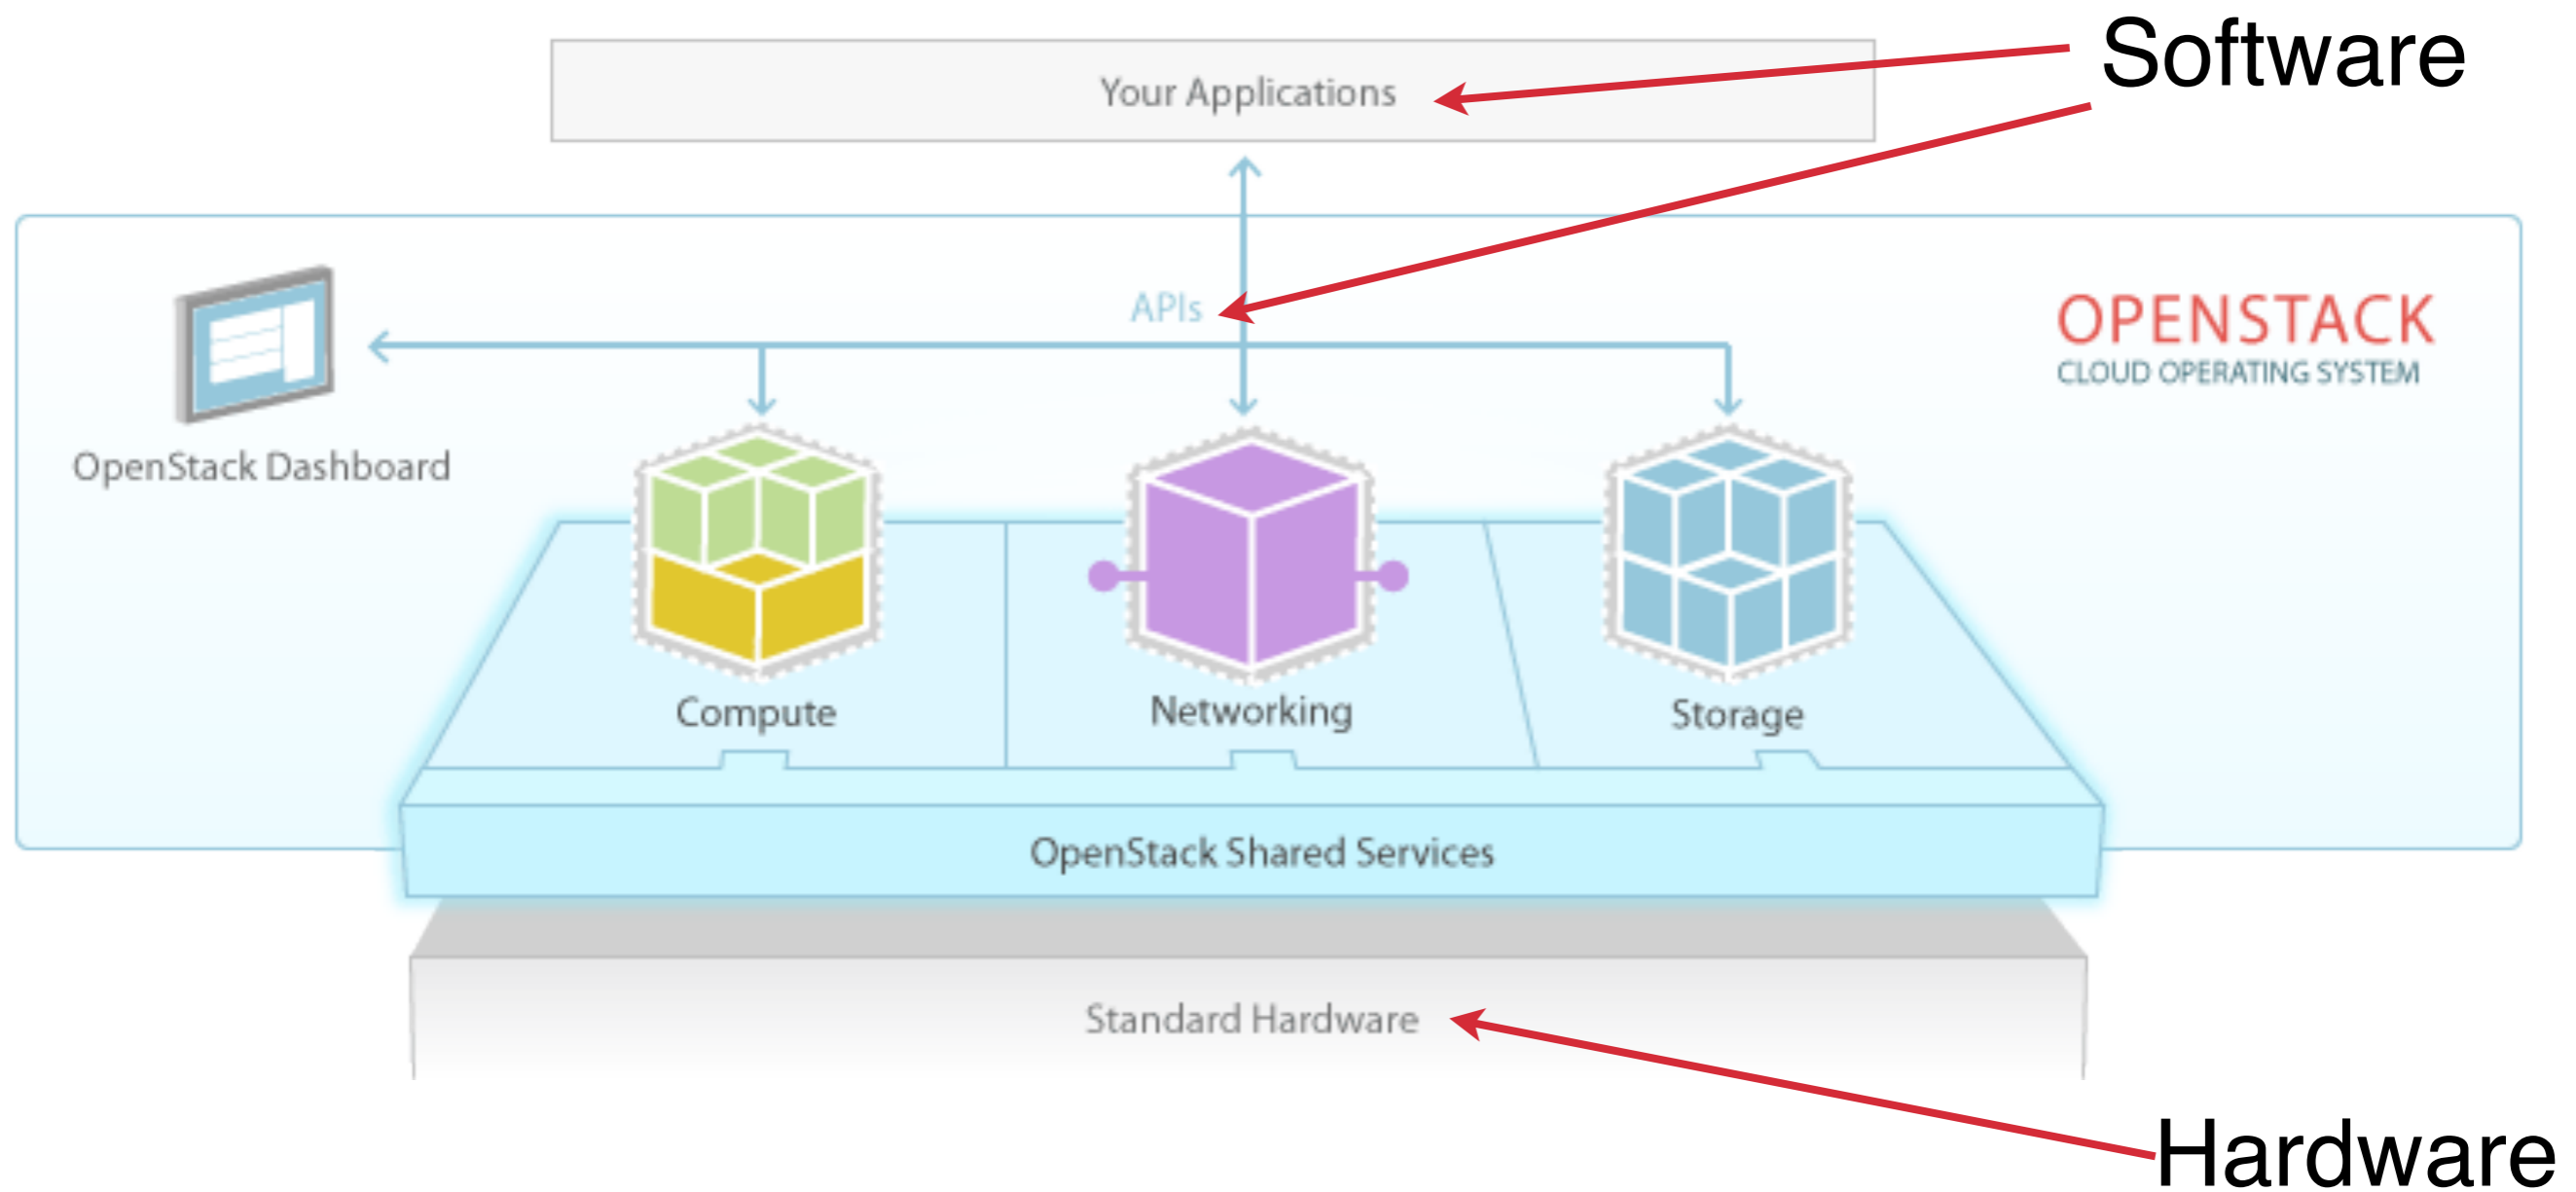

But who's counting?

My Happy Place

**Software
Development**

**Hardware
Management**

OpenStack in 60* seconds

* I reserve the right to take more than 60 seconds

OpenStack in 60* seconds

- Cracking the code (names)
 - Nova
 - Swift
 - Glance
 - Keystone
 - Horizon
 - Cinder
 - Quantum

* I reserve the right to take more than 60 seconds

Make It “Cloudy”

The End

1 Enable Scaling

2 Expect Failure

The Questions

- 1 How is my **application** going to handle **success**?
- 2 How is my **application** going to handle **failure**?

The Benefits

Cloud can provide powerful options for **scaling your application**

Cloud can help your application **handle failure elegantly**

The Benefits !instant

My Application

Scale &
Fault
Tolerance

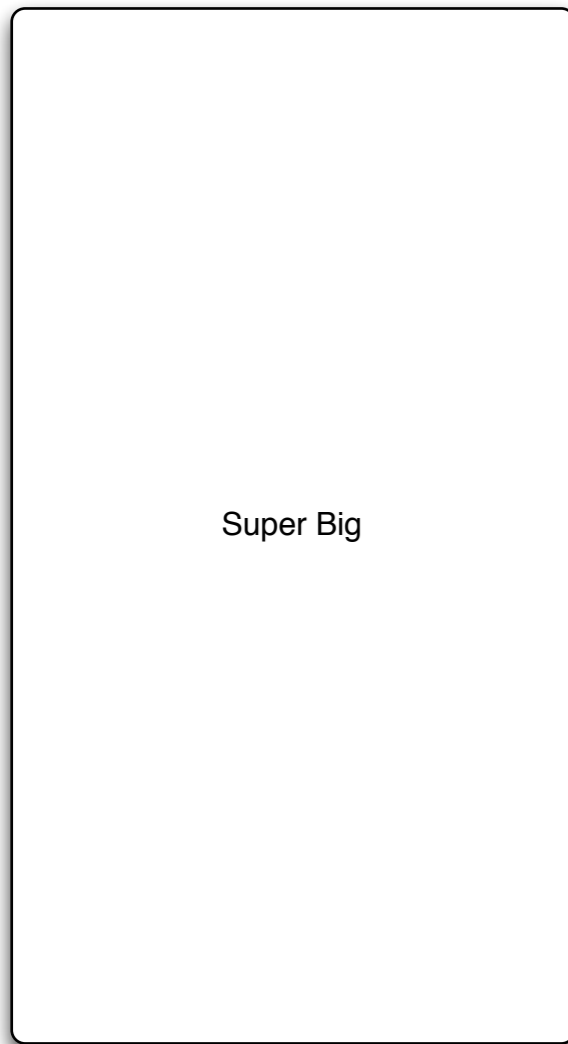

Cloud Enable Your App

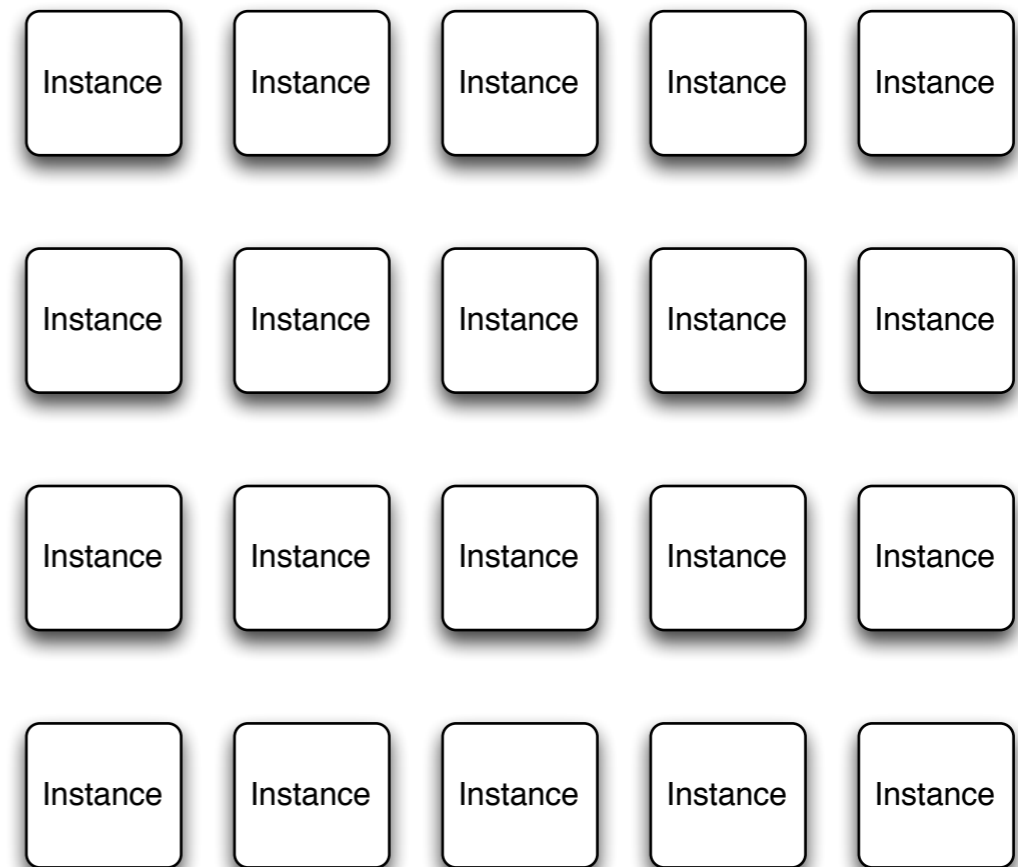

Horizontal Scaling

Don't buy a bigger box, just get more boxes

Scaling in a Cloud World

Vertical

Horizontal

Componentized

Break your app into components

“Componentize” your application

Identify your Node Types

Web
Server
Node

Running the web server
May leverage a web framework
Serves the user interface

Service
Node

Only accessible by the web server nodes
Specialized to deliver discrete functionality
Stateless and autonomous

Data
Node

Interacts with the datastore
Read only from the web server nodes
Read / Write from the service nodes

“Componentize” your application

Identify your Node Types

Service
Node

Only accessible by the web server nodes
Specialized to deliver discrete functionality
Stateless and autonomous

Registration

Service Oriented Architecture

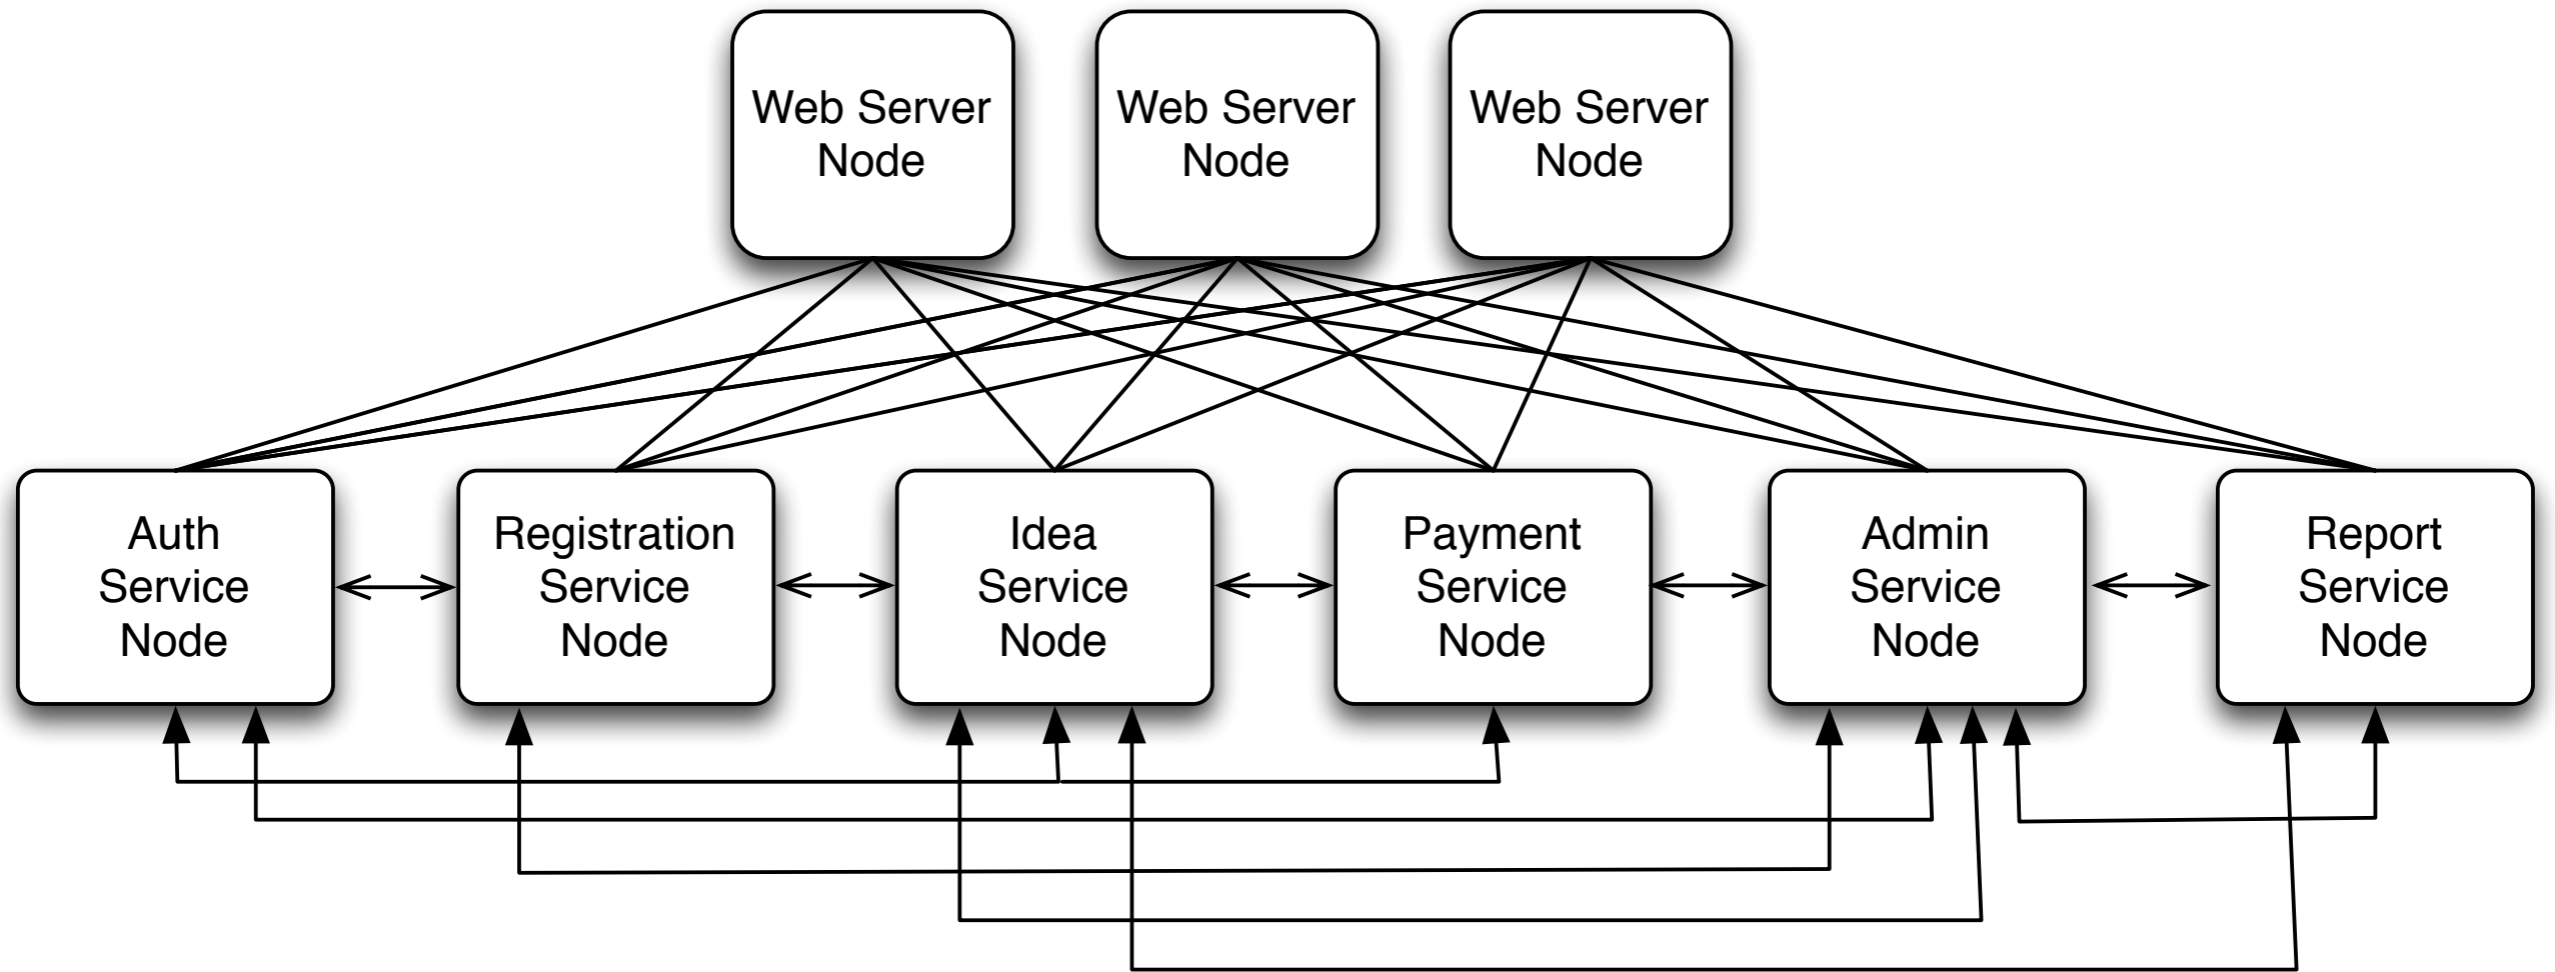

**How you “Componentize”
your application will
determine how you scale your
application**

Loosely Coupled & Autonomous

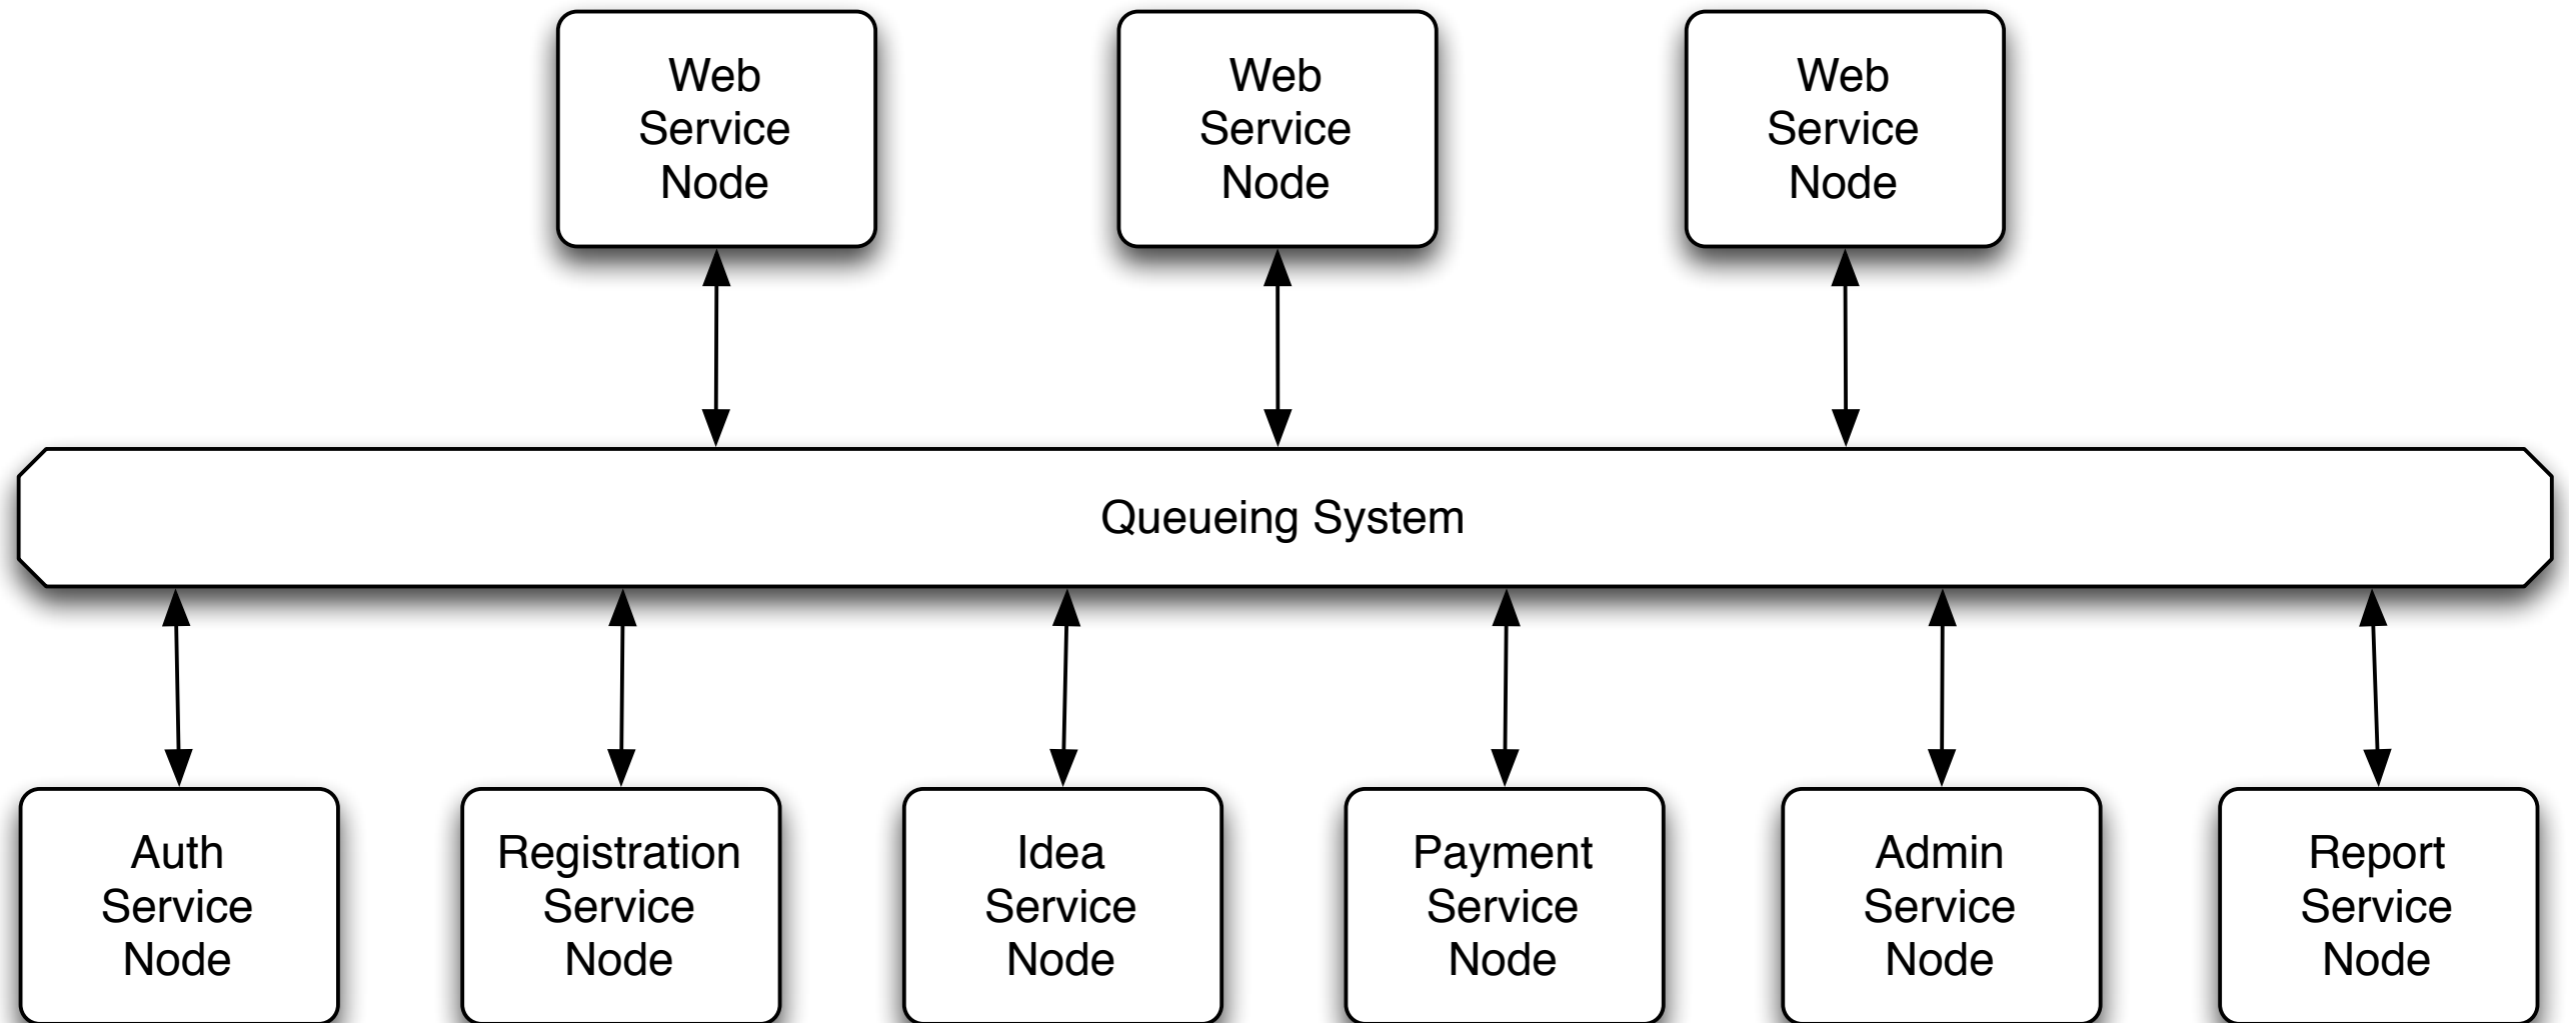

Lets keep it on a need to know basis

Loosely Coupled & Autonomous

NOT!

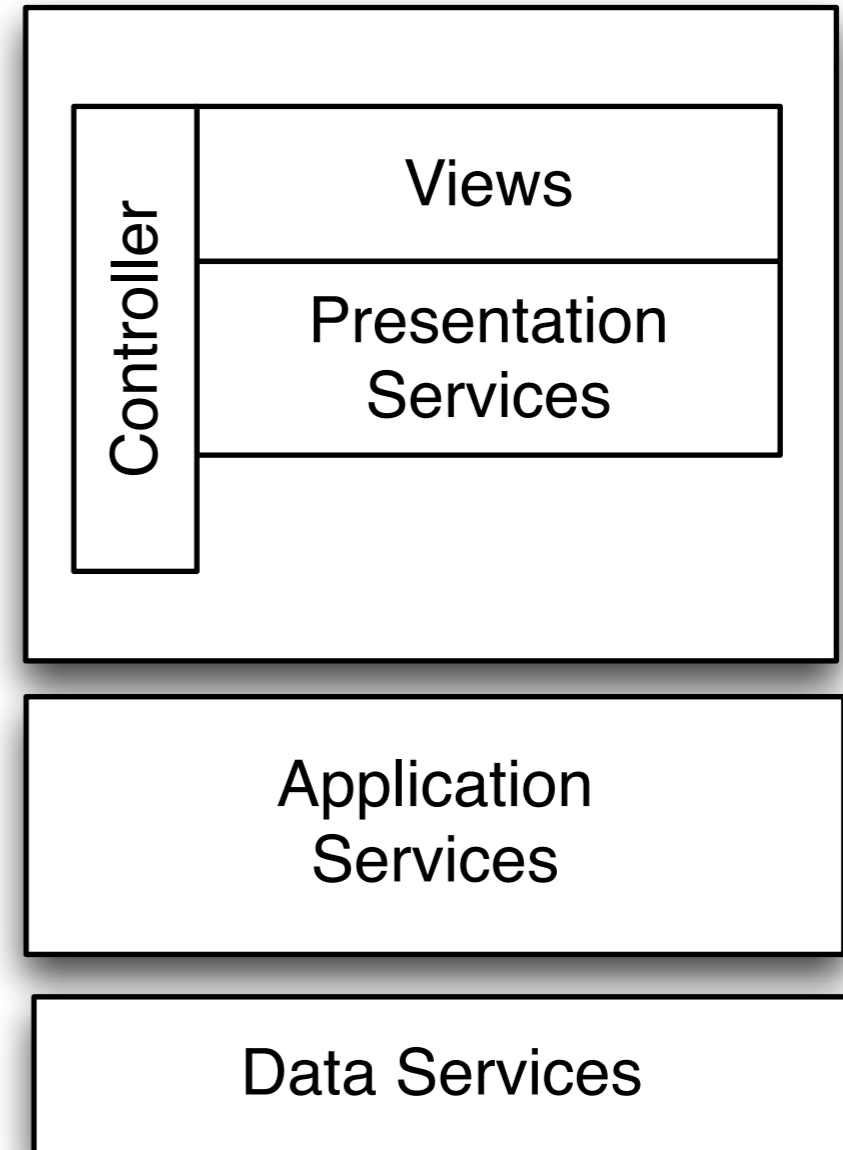

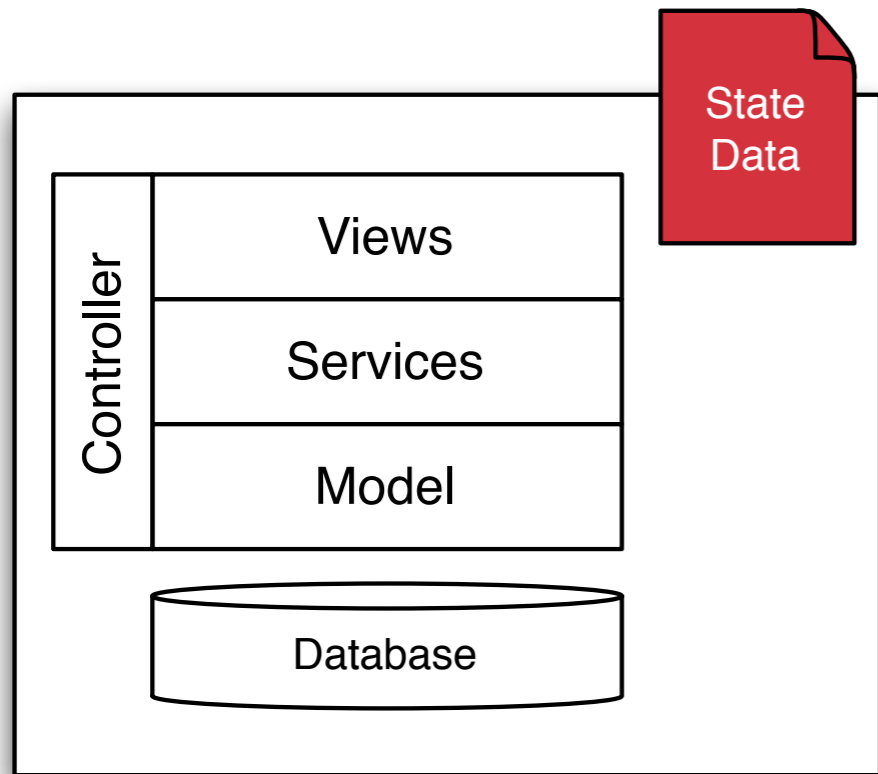

Loosely Coupled & Autonomous

Stateless Nodes

Not necessarily a stateless application

Stateless Nodes

Persistent Storage

Where does all my data live?

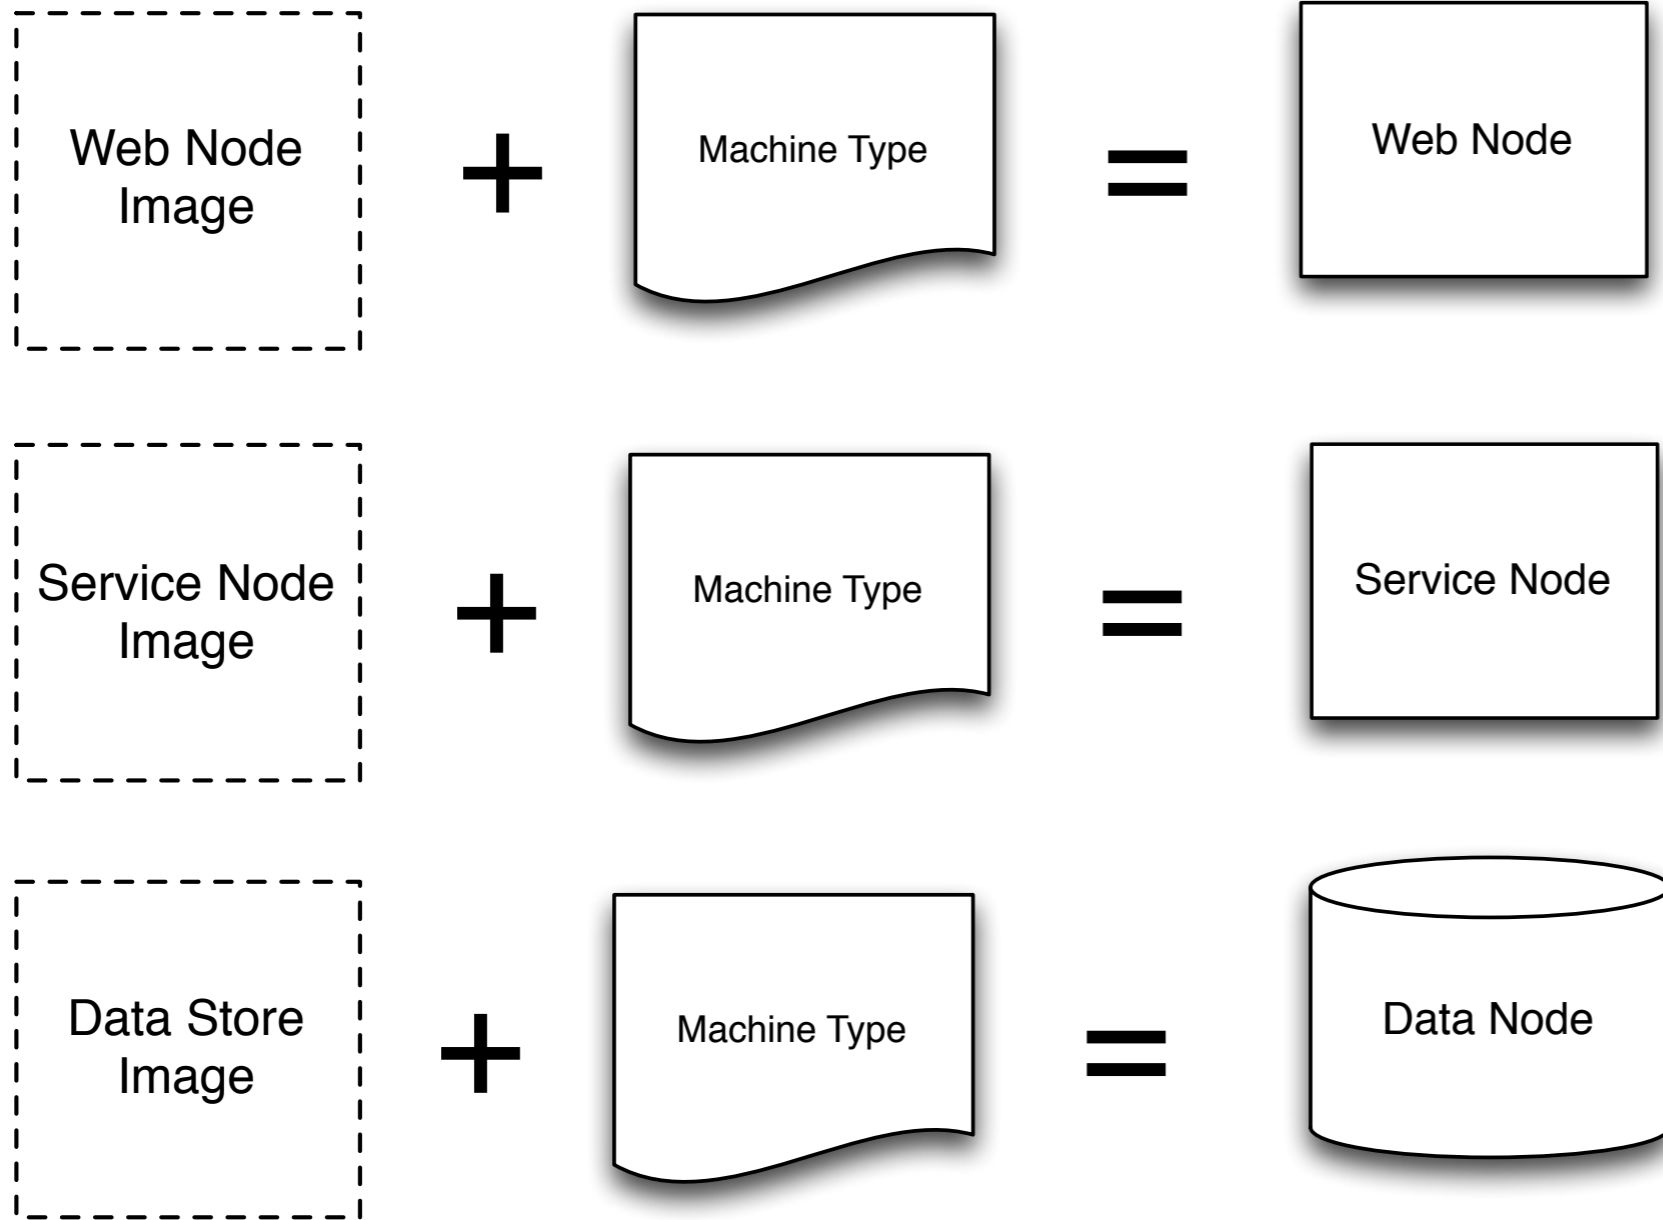

Persistent Storage

Images

The key to being scale ready

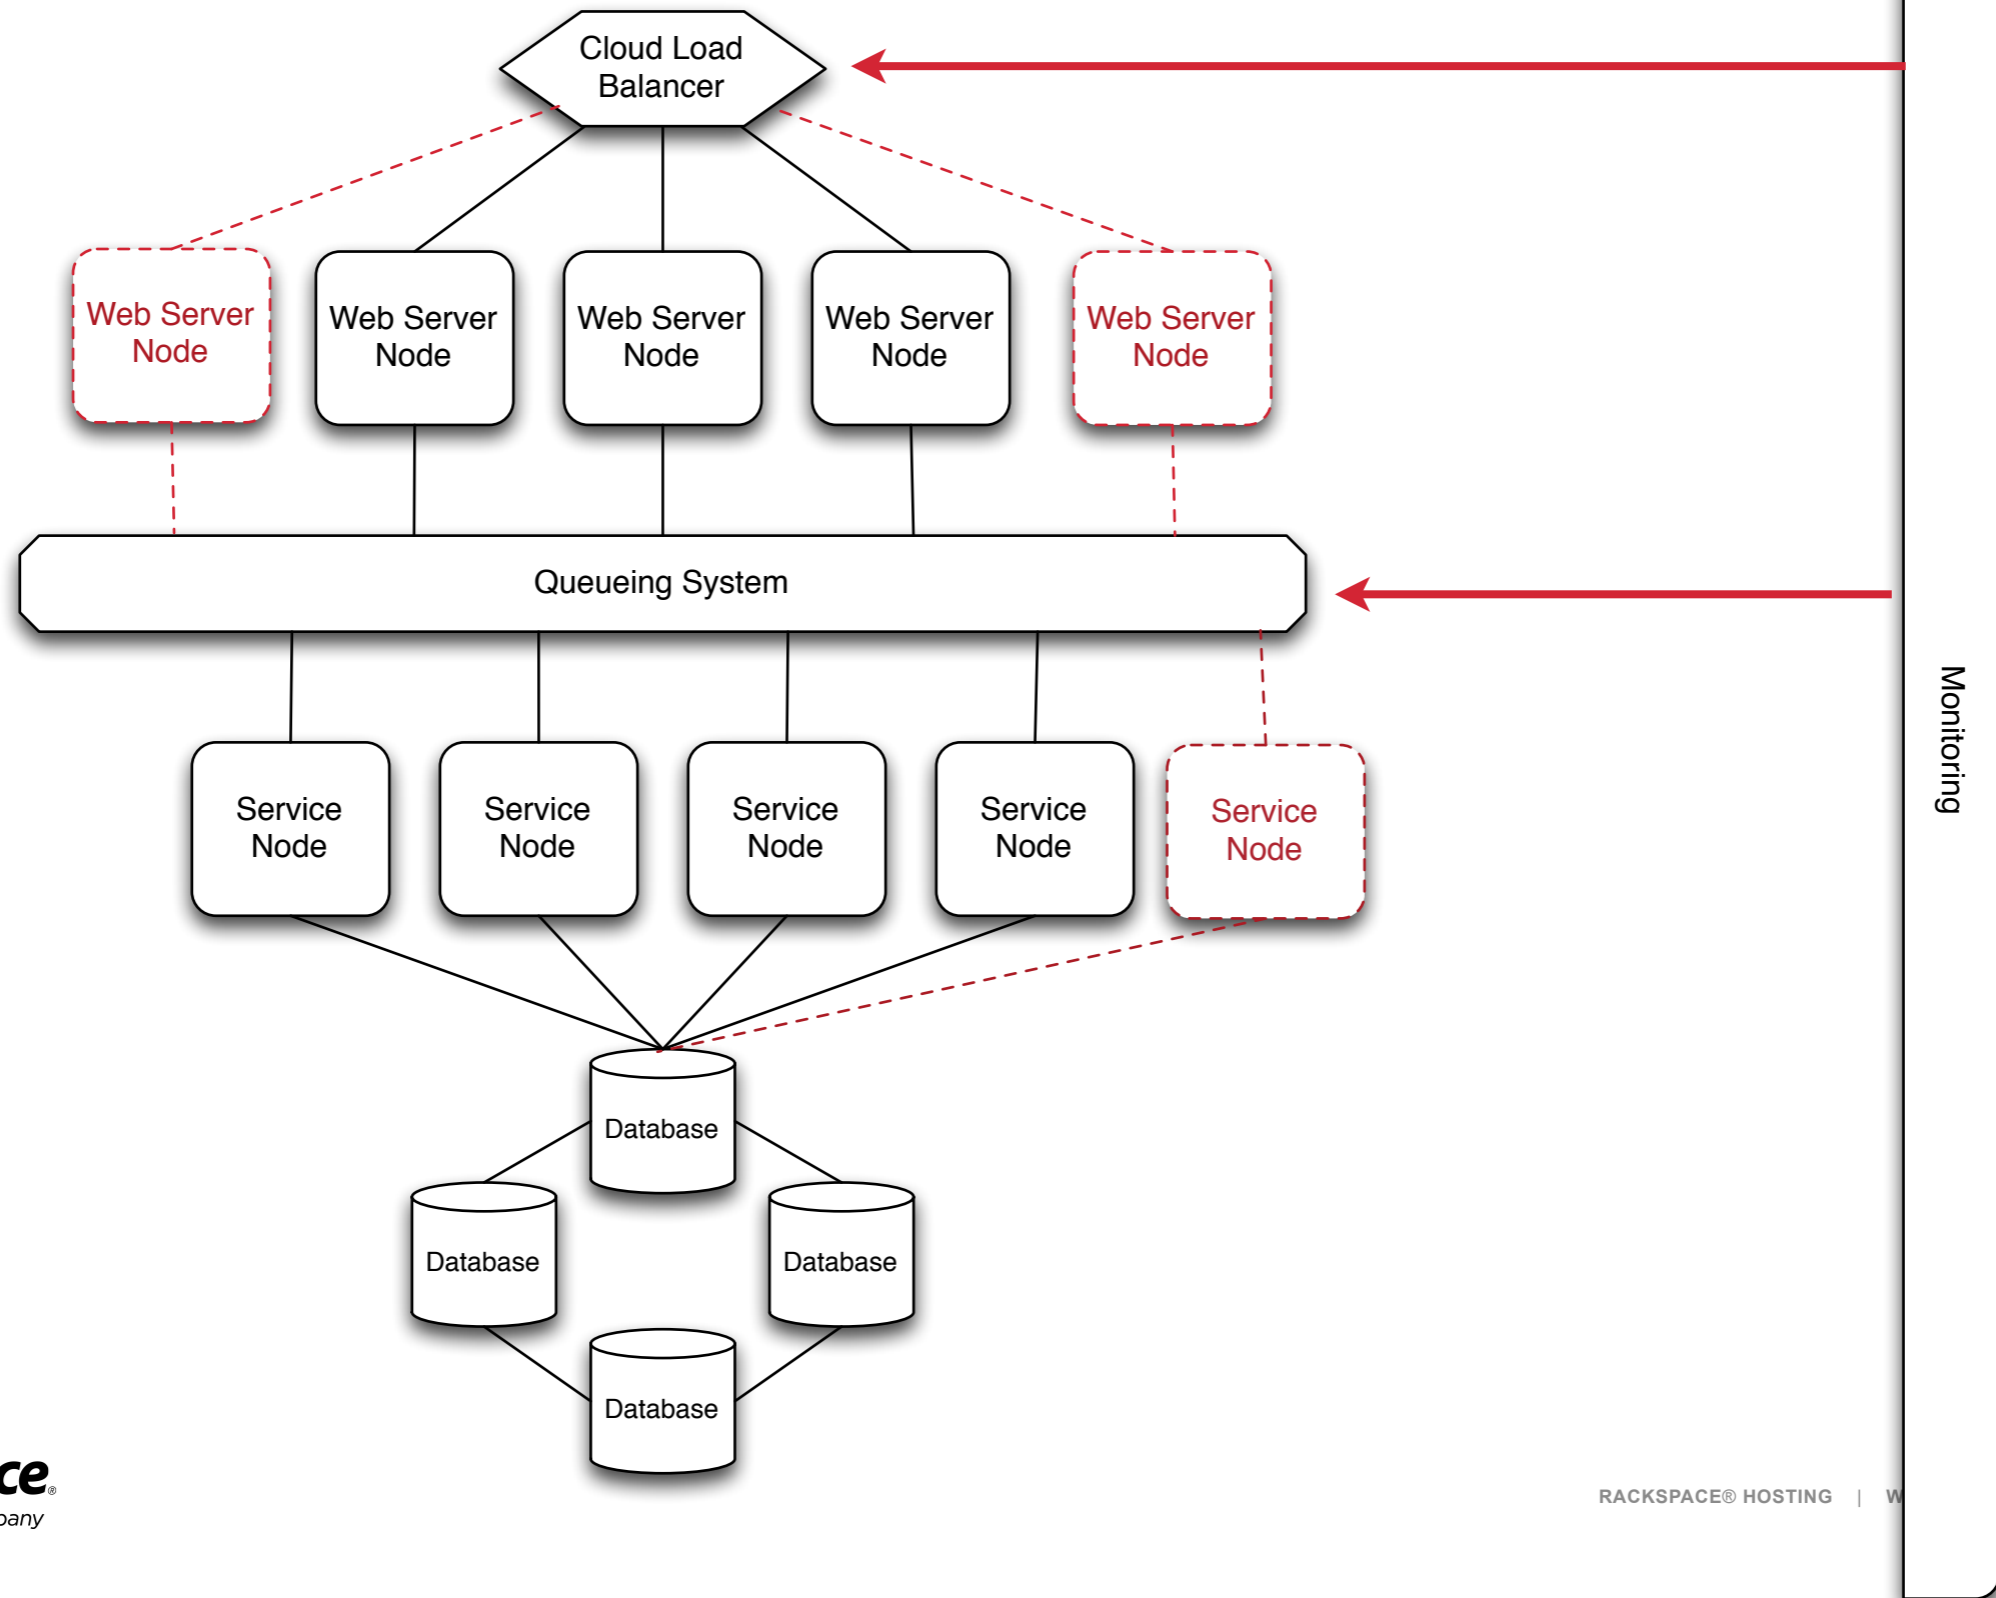

Images

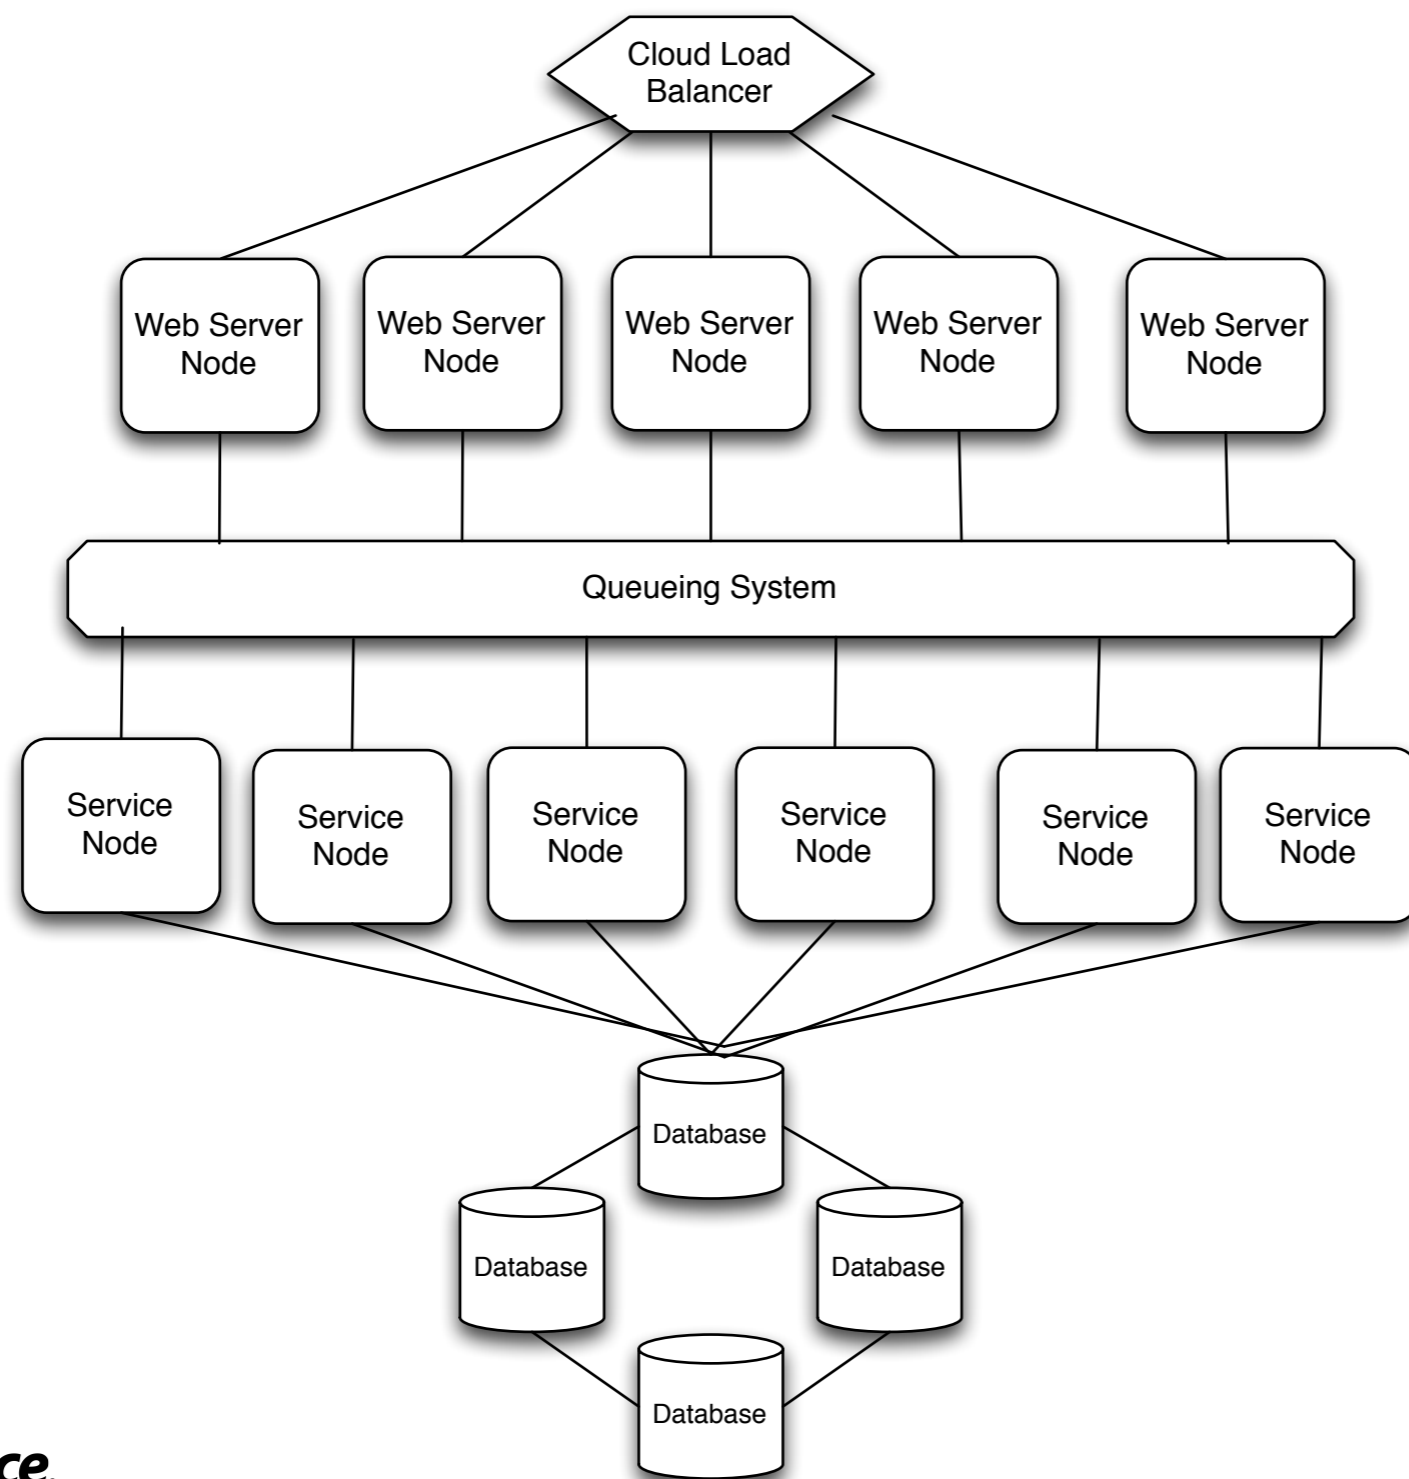

Smart Scaling

It's Alive!

Auto-Scaling

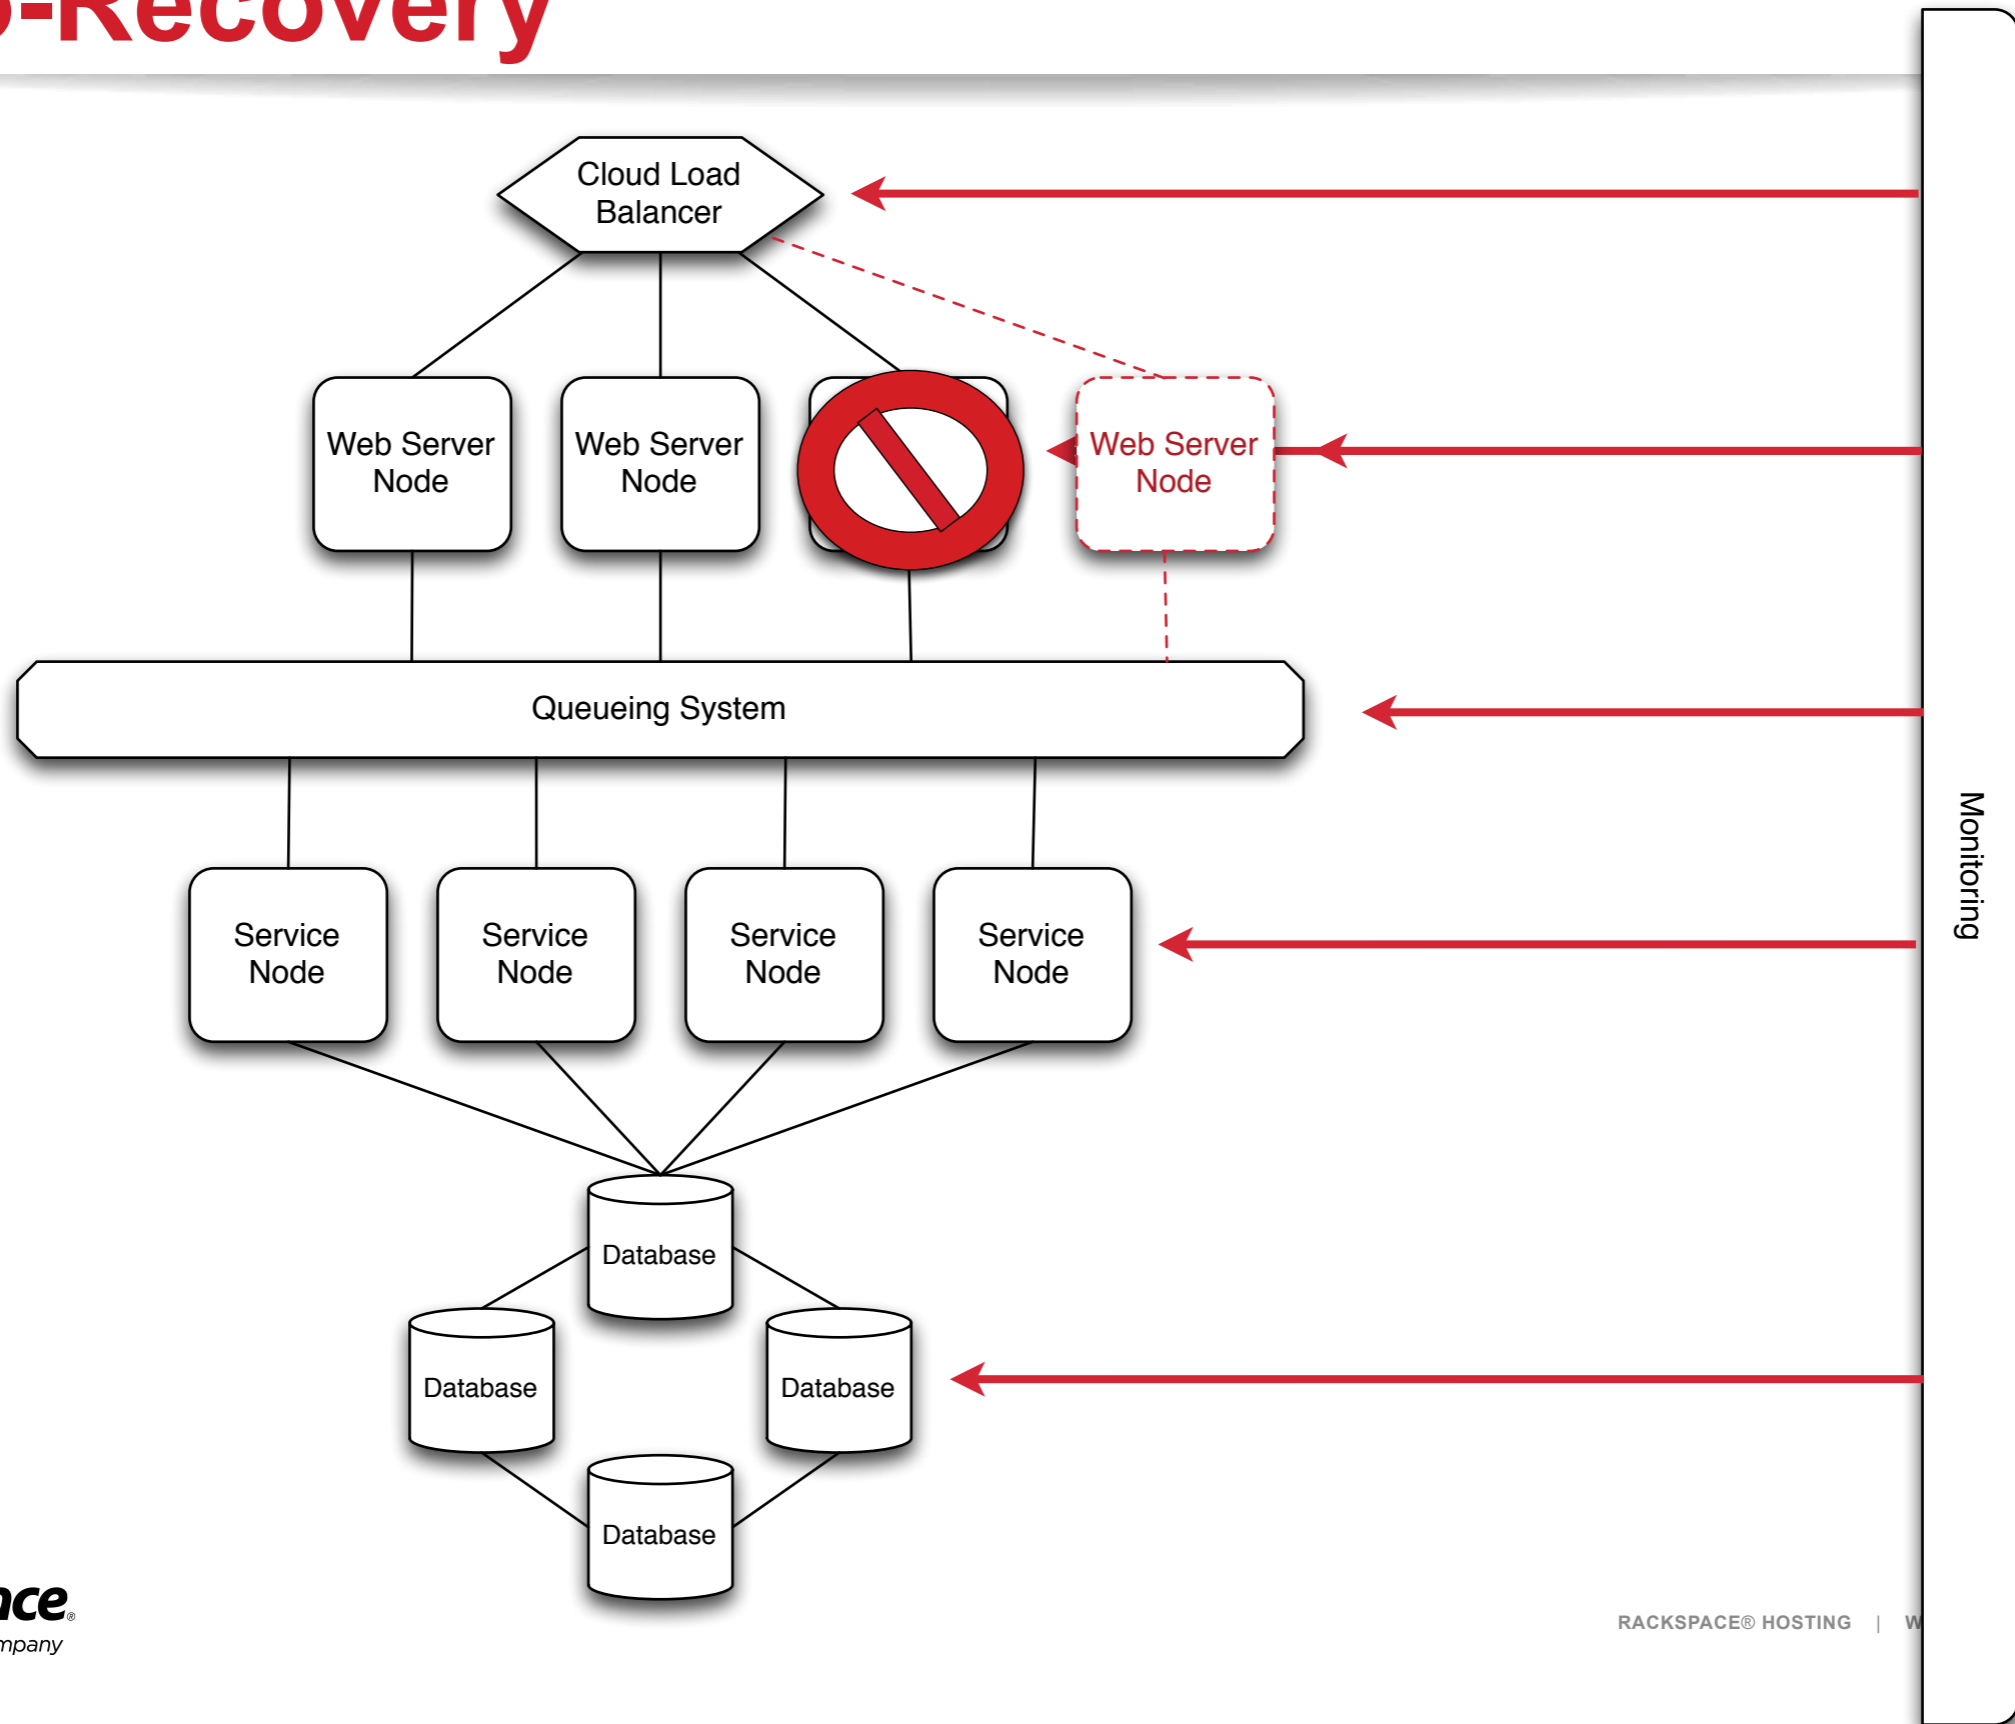

Cost-Scaling

Failure Recovery

Expect Failure and Code For It

Auto-Recovery

The End

1 Enable Scaling

2 Expect Failure
