

The slide features a decorative background on the left side with a repeating pattern of geometric shapes and arrows. A yellow horizontal bar spans across the top, and a green line starts from a small black circle with white dots on the left, curves over the yellow bar, and ends on the right side.

# Soldagem

Método de união localizada de materiais através de aquecimento a temperaturas adequadas com ou sem aplicação de pressão, podendo-se usar material de adição.

Definição da AWS

# Classificação

Soldagem

Fixação por  
Adesivo

Fixação eletro-  
magnética

Soldagem  
por fusão

Soldagem no  
estado sólido

Brasagem e  
Solda Branda

# Processos de Soldagem

- ✚ Soldagem por fusão: utilizam fusão dos materiais a serem unidos.
- ✚ Soldagem no estado sólido: não ocorre fusão dos materiais a serem unidos ou de qualquer outro
- ✚ Brasagem: fusão somente do material de adição ( $T > 450\text{C}$ )
- ✚ Solda Branda: fusão somente do material de adição ( $T < 450\text{C}$ )

# Aplicações

- ✚ Fabricação: produção de manufaturados
- ✚ Manutenção e Reparos: Prolongamento da vida útil de peças e componentes
- ✚ Vantagens:
  - Meio barato de união de metais
  - Aplicáveis para a união de todos os metais comerciais
  - Propicia flexibilidade de projeto
  - Reduz o tempo e o custo de fabricação
  - Fácil de ser utilizado na recuperação e manutenção de produtos

Carbono

# Tipos de Chama

**Acetylene Burning in Atmosphere**  
Open fuel gas valve until smoke clears from flame.

**Carburizing Flame**  
(Excess acetylene with oxygen.) Used for hard-facing and welding white metal

**Neutral Flame**  
(Acetylene and oxygen.) Temp. 5600 F. For fusion welding of steel and cast iron.

**Oxidizing Flame**  
(Acetylene and excess oxygen.) For braze welding with bronze rod.
