International Financial Reporting Standard 15

Revenue from Contracts with Customers

In April 2001 the International Accounting Standards Board (IASB) adopted IAS 11 Construction Contracts and IAS 18 Revenue, both of which had originally been issued by the International Accounting Standards Committee (IASC) in December 1993. IAS 18 replaced a previous version: Revenue Recognition (issued in December 1982). IAS 11 replaced parts of IAS 11 Accounting for Construction Contracts (issued in March 1979).

In December 2001 the IASB issued SIC-31 Revenue—Barter Transactions Involving Advertising Services. The Interpretation was originally developed by the Standards Interpretations Committee of the IASC to determine the circumstances in which a seller of advertising services can reliably measure revenue at the fair value of advertising services provided in a barter transaction.

In June 2007 the IASB issued IFRIC 13 Customer Loyalty Programmes. The Interpretation was developed by the IFRS Interpretations Committee (the 'Interpretations Committee') to address the accounting by the entity that grants award credits to its customers.

In July 2008 the IASB issued IFRIC 15 Agreements for the Construction of Real Estate. The Interpretation was developed by the Interpretations Committee to apply to the accounting for revenue and associated expenses by entities that undertake the construction of real estate directly or through subcontractors.

In January 2009 the IASB issued IFRIC 18 Transfers of Assets from Customers. The Interpretation was developed by the Interpretations Committee to apply to the accounting for transfers of items of property, plant and equipment by entities that receive such transfers from their customers.

In May 2014 the IASB issued IFRS 15 Revenue from Contracts with Customers, together with the introduction of Topic 606 into the Financial Accounting Standards Board’s Accounting Standards Codification™. IFRS 15 replaces IAS 11, IAS 18, SIC-31, IFRIC 13, IFRIC 15 and IFRIC 18. IFRS 15 provides a comprehensive framework for recognising revenue from contracts with customers.

Amendments to the guidance on other Standards
International Financial Reporting Standard 15 *Revenue from Contracts with Customers* (IFRS 15) is set out in paragraphs 1–129 and Appendices A–D. All the paragraphs have equal authority. Paragraphs in **bold type** state the main principles. Terms defined in Appendix A are in *italics* the first time that they appear in the Standard. Definitions of other terms are given in the Glossary for International Financial Reporting Standards. The Standard should be read in the context of its objective and the Basis for Conclusions, the *Preface to International Financial Reporting Standards* and the *Conceptual Framework for Financial Reporting*. IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* provides a basis for selecting and applying accounting policies in the absence of explicit guidance. (Refer: IAS 8 paragraphs 10–12)
Introduction

Overview

IN1 International Financial Reporting Standard 15 Revenue from Contracts with Customers (IFRS 15) establishes principles for reporting useful information to users of financial statements about the nature, amount, timing and uncertainty of revenue and cash flows arising from an entity’s contracts with customers.

IN2 IFRS 15 is effective for annual periods beginning on or after 1 January 2017. Earlier application is permitted.

IN3 IFRS 15 supersedes:
(a) IAS 11 Construction Contracts;
(b) IAS 18 Revenue;
(c) IFRIC 13 Customer Loyalty Programmes;
(d) IFRIC 15 Agreements for the Construction of Real Estate;
(e) IFRIC 18 Transfers of Assets from Customers; and
(f) SIC-31 Revenue—Barter Transactions Involving Advertising Services.

Reasons for issuing the IFRS

[Refer: Basis for Conclusions paragraphs BC2–BC15]

IN4 Revenue is an important number to users of financial statements in assessing an entity’s financial performance and position. However, previous revenue recognition requirements in International Financial Reporting Standards (IFRS) differed from those in US Generally Accepted Accounting Principles (US GAAP) and both sets of requirements were in need of improvement. Previous revenue recognition requirements in IFRS provided limited guidance and, consequently, the two main revenue recognition Standards, IAS 18 and IAS 11, could be difficult to apply to complex transactions. In addition, IAS 18 provided limited guidance on many important revenue topics such as accounting for multiple-element arrangements. In contrast, US GAAP comprised broad revenue recognition concepts together with numerous revenue requirements for particular industries or transactions, which sometimes resulted in different accounting for economically similar transactions. [Refer also: Basis for Conclusions paragraph BC2]

IN5 Accordingly, the International Accounting Standards Board (IASB) and the US national standard-setter, the Financial Accounting Standards Board (FASB), initiated a joint project to clarify the principles for recognising revenue and to develop a common revenue standard for IFRS and US GAAP that would:
(a) remove inconsistencies and weaknesses in previous revenue requirements;
(b) provide a more robust framework for addressing revenue issues;
IFRS 15

(c) improve comparability of revenue recognition practices across entities, industries, jurisdictions and capital markets;

(d) provide more useful information to users of financial statements through improved disclosure requirements; and

(e) simplify the preparation of financial statements by reducing the number of requirements to which an entity must refer.

[Refer: Basis for Conclusions paragraph BC3]

IN6 IFRS 15, together with Topic 606 that was introduced into the FASB Accounting Standards Codification® by Accounting Standards Update 2014-09 Revenue from Contracts with Customers (Topic 606), completes the joint effort by the IASB and the FASB to meet those objectives and improve financial reporting by creating a common revenue recognition standard for IFRS and US GAAP.

Main features

IN7 The core principle of IFRS 15 is that an entity recognises revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. [Refer: Basis for Conclusions paragraph BC12] An entity recognises revenue in accordance with that core principle by applying the following steps:

(a) **Step 1: Identify the contract(s) with a customer**—a contract is an agreement between two or more parties that creates enforceable rights and obligations. [Refer: Basis for Conclusions paragraph BC32] The requirements of IFRS 15 apply to each contract that has been agreed upon with a customer and meets specified criteria. In some cases, IFRS 15 requires an entity to combine contracts and account for them as one contract. [Refer: Basis for Conclusions paragraphs BC71–BC75] IFRS 15 also provides requirements for the accounting for contract modifications. [Refer: Basis for Conclusions paragraphs BC76–BC83]

(b) **Step 2: Identify the performance obligations in the contract**—a contract includes promises to transfer goods or services to a customer. [Refer: Basis for Conclusions paragraph BC84] If those goods or services are distinct, the promises are performance obligations and are accounted for separately. [Refer: Basis for Conclusions paragraphs BC97 and BC102] A good or service is distinct if the customer can benefit from the good or service on its own or together with other resources that are readily available to the customer and the entity’s promise to transfer the good or service to the customer is separately identifiable from other promises in the contract.

(c) **Step 3: Determine the transaction price**—the transaction price is the amount of consideration in a contract to which an entity expects to be entitled in exchange for transferring promised goods or services to a customer. [Refer: Basis for Conclusions paragraph BC185] The transaction price can be a fixed amount of customer consideration, but it may sometimes include variable consideration or consideration in a form other than cash. The transaction price is also adjusted for the effects of the time value of money if the contract includes a significant financing
component and for any consideration payable to the customer. If the consideration is variable, an entity estimates the amount of consideration to which it will be entitled in exchange for the promised goods or services. The estimated amount of variable consideration will be included in the transaction price only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the variable consideration is subsequently resolved. [Refer: Basis for Conclusions paragraphs BC203 and BC206]

(d) **Step 4: Allocate the transaction price to the performance obligations in the contract**—an entity typically allocates the transaction price to each performance obligation on the basis of the relative stand-alone selling prices of each distinct good or service promised in the contract. [Refer: Basis for Conclusions paragraph 266] If a stand-alone selling price is not observable, an entity estimates it. Sometimes, the transaction price includes a discount or a variable amount of consideration that relates entirely to a part of the contract. The requirements specify when an entity allocates the discount or variable consideration to one or more, but not all, performance obligations (or distinct goods or services) in the contract. [Refer: Basis for Conclusions paragraph BC277]

(e) **Step 5: Recognise revenue when (or as) the entity satisfies a performance obligation**—an entity recognises revenue when (or as) it satisfies a performance obligation by transferring a promised good or service to a customer (which is when the customer obtains control of that good or service). [Refer: Basis for Conclusions paragraph BC117] The amount of revenue recognised is the amount allocated to the satisfied performance obligation. A performance obligation may be satisfied at a point in time (typically for promises to transfer goods to a customer) or over time (typically for promises to transfer services to a customer). For performance obligations satisfied over time, an entity recognises revenue over time by selecting an appropriate method for measuring the entity’s progress towards complete satisfaction of that performance obligation. [Refer: Basis for Conclusions paragraphs BC158–BC162]

IN8 IFRS 15 also includes a cohesive set of disclosure requirements that would result in an entity providing users of financial statements with comprehensive information about the nature, amount, timing and uncertainty of revenue and cash flows arising from the entity’s contracts with customers. Specifically, IFRS 15 requires an entity to provide information about:

(a) revenue recognised from contracts with customers, including the disaggregation of revenue into appropriate categories; [Refer: Basis for Conclusions paragraph BC335]

(b) contract balances, including the opening and closing balances of receivables, contract assets and contract liabilities; [Refer: Basis for Conclusions paragraphs BC346 and BC347]

© IFRS Foundation
IFRS 15

(c) performance obligations, including when the entity typically satisfies its performance obligations and the transaction price that is allocated to the remaining performance obligations in a contract; [Refer: Basis for Conclusions paragraphs BC350 and BC354]

(d) significant judgements, and changes in judgements, made in applying the requirements to those contracts; [Refer: Basis for Conclusions paragraph BC355] and

(e) assets recognised from the costs to obtain or fulfil a contract with a customer. [Refer: Basis for Conclusions paragraph BC356]

IN9 The IASB and the FASB achieved their goal of reaching the same conclusions on all requirements for the accounting for revenue from contracts with customers. As a result, IFRS 15 and Topic 606 are substantially the same. However, there are some minor differences which are outlined in the appendix to the Basis for Conclusions. [Refer: Basis for Conclusions paragraph A1]
International Financial Reporting Standard 15
Revenue from Contracts with Customers

Objective

1 The objective of this Standard is to establish the principles that an entity shall apply to report useful information to users of financial statements about the nature, amount, timing and uncertainty of revenue and cash flows arising from a contract with a customer.

[Link to Basis for Conclusions paragraphs BC22–BC24 for the reasons why the boards did not develop an activities model]

Meeting the objective

2 To meet the objective in paragraph 1, the core principle of this Standard is that an entity shall recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. [Refer: Basis for Conclusions paragraphs BC12, BC19–BC21 and BC25–BC27]

3 An entity shall consider the terms of the contract and all relevant facts and circumstances when applying this Standard. An entity shall apply this Standard, including the use of any practical expedients, consistently to contracts with similar characteristics and in similar circumstances.

4 This Standard specifies the accounting for an individual contract with a customer. However, as a practical expedient, an entity may apply this Standard to a portfolio of contracts (or performance obligations) with similar characteristics if the entity reasonably expects that the effects on the financial statements of applying this Standard to the portfolio would not differ materially from applying this Standard to the individual contracts (or performance obligations) within that portfolio. When accounting for a portfolio, an entity shall use estimates and assumptions that reflect the size and composition of the portfolio. [Refer: Basis for Conclusions paragraphs BC69 and BC70 Illustrative Examples, example 22]

Scope

5 An entity shall apply this Standard to all contracts with customers, except the following:

(a) lease contracts within the scope of IAS 17 Leases;
(b) insurance contracts within the scope of IFRS 4 Insurance Contracts;
(c) financial instruments and other contractual rights or obligations within the scope of IFRS 9 Financial Instruments, IFRS 10 Consolidated Financial Statements, IFRS 11 Joint Arrangements, IAS 27 Separate Financial Statements and IAS 28 Investments in Associates and Joint Ventures; and

© IFRS Foundation
(d) non-monetary exchanges between entities in the same line of business to facilitate sales to customers or potential customers. For example, this Standard would not apply to a contract between two oil companies that agree to an exchange of oil to fulfil demand from their customers in different specified locations on a timely basis. [Refer: Basis for Conclusions paragraphs BC58 and BC59]

[Refer: Basis for Conclusions paragraphs BC28 and BC60–BC63]

6 An entity shall apply this Standard to a contract (other than a contract listed in paragraph 5) only if the counterparty to the contract is a customer. [Refer: Basis for Conclusions paragraphs BC52–BC57] A customer is a party that has contracted with an entity to obtain goods or services that are an output of the entity’s ordinary activities in exchange for consideration. A counterparty to the contract would not be a customer if, for example, the counterparty has contracted with the entity to participate in an activity or process in which the parties to the contract share in the risks and benefits that result from the activity or process (such as developing an asset in a collaboration arrangement) rather than to obtain the output of the entity’s ordinary activities.

7 A contract with a customer may be partially within the scope of this Standard and partially within the scope of other Standards listed in paragraph 5.

(a) If the other Standards specify how to separate and/or initially measure one or more parts of the contract, then an entity shall first apply the separation and/or measurement requirements in those Standards. An entity shall exclude from the transaction price the amount of the part (or parts) of the contract that are initially measured in accordance with other Standards and shall apply paragraphs 73–86 to allocate the amount of the transaction price that remains (if any) to each performance obligation within the scope of this Standard and to any other parts of the contract identified by paragraph 7(b).

(b) If the other Standards do not specify how to separate and/or initially measure one or more parts of the contract, then the entity shall apply this Standard to separate and/or initially measure the part (or parts) of the contract.

[Refer: Basis for Conclusions paragraphs BC64–BC66]

8 This Standard specifies the accounting for the incremental costs of obtaining a contract with a customer and for the costs incurred to fulfil a contract with a customer if those costs are not within the scope of another Standard (see paragraphs 91–104). An entity shall apply those paragraphs only to the costs incurred that relate to a contract with a customer (or part of that contract) that is within the scope of this Standard.

Recognition

Identifying the contract

[Refer: Illustrative Examples, examples 1–4]

9 An entity shall account for a contract with a customer that is within the scope of this Standard only when all of the following criteria are met:

[Refer: Basis for Conclusions paragraphs BC33 and BC34]
(a) the parties to the contract have approved the contract (in writing, orally or in accordance with other customary business practices) and are committed to perform their respective obligations; [Refer: Basis for Conclusions paragraphs BC35 and BC36]

(b) the entity can identify each party’s rights regarding the goods or services to be transferred; [Refer: Basis for Conclusions paragraph BC37]

(c) the entity can identify the payment terms for the goods or services to be transferred; [Refer: Basis for Conclusions paragraphs BC38 and BC39]

(d) the contract has commercial substance (i.e., the risk, timing or amount of the entity’s future cash flows is expected to change as a result of the contract); [Refer: Basis for Conclusions paragraphs BC40 and BC41] and

(e) it is probable [Refer also: Basis for Conclusions paragraph BC44] that the entity will collect the consideration to which it will be entitled in exchange for the goods or services that will be transferred to the customer. In evaluating whether collectability of an amount of consideration is probable, an entity shall consider only the customer’s ability and intention to pay that amount of consideration when it is due. The amount of consideration to which the entity will be entitled may be less than the price stated in the contract if the consideration is variable because the entity may offer the customer a price concession (see paragraph 52). [Refer: Basis for Conclusions paragraphs BC42–BC46 and BC265 and Illustrative Examples, examples 1 and 2]

[Refer also: Illustrative Examples, example 3]

10 A contract is an agreement between two or more parties that creates enforceable rights and obligations. Enforceability of the rights and obligations in a contract is a matter of law. Contracts can be written, oral or implied by an entity’s customary business practices. The practices and processes for establishing contracts with customers vary across legal jurisdictions, industries and entities. In addition, they may vary within an entity (for example, they may depend on the class of customer or the nature of the promised goods or services). An entity shall consider those practices and processes in determining whether and when an agreement with a customer creates enforceable rights and obligations.

11 Some contracts with customers may have no fixed duration and can be terminated or modified by either party at any time. Other contracts may automatically renew on a periodic basis that is specified in the contract. An entity shall apply this Standard to the duration of the contract (i.e., the contractual period) in which the parties to the contract have present enforceable rights and obligations.

12 For the purpose of applying this Standard, a contract does not exist if each party to the contract has the unilateral enforceable right to terminate a wholly unperformed contract without compensating the other party (or parties). A contract is wholly unperformed if both of the following criteria are met:

(a) the entity has not yet transferred any promised goods or services to the customer; and
(b) the entity has not yet received, and is not yet entitled to receive, any consideration in exchange for promised goods or services.

[Refer: Basis for Conclusions paragraphs BC50 and BC51]

13 If a contract with a customer meets the criteria in paragraph 9 at contract inception, an entity shall not reassess those criteria unless there is an indication of a significant change in facts and circumstances. For example, if a customer’s ability to pay the consideration deteriorates significantly, an entity would reassess whether it is probable that the entity will collect the consideration to which the entity will be entitled in exchange for the remaining goods or services that will be transferred to the customer.

[Refer: Illustrative Examples, example 4]

14 If a contract with a customer does not meet the criteria in paragraph 9, an entity shall continue to assess the contract to determine whether the criteria in paragraph 9 are subsequently met.

15 When a contract with a customer does not meet the criteria in paragraph 9 and an entity receives consideration from the customer, the entity shall recognise the consideration received as revenue only when either of the following events has occurred:

(a) the entity has no remaining obligations to transfer goods or services to the customer and all, or substantially all, of the consideration promised by the customer has been received by the entity and is non-refundable; or

(b) the contract has been terminated and the consideration received from the customer is non-refundable.

[Refer: Basis for Conclusions paragraphs BC47 and BC48
Illustrative Examples, example 1]

16 An entity shall recognise the consideration received from a customer as a liability until one of the events in paragraph 15 occurs or until the criteria in paragraph 9 are subsequently met (see paragraph 14). Depending on the facts and circumstances relating to the contract, the liability recognised represents the entity’s obligation to either transfer goods or services in the future or refund the consideration received. In either case, the liability shall be measured at the amount of consideration received from the customer.

**Combination of contracts**

[Refer: Basis for Conclusions paragraphs BC71–BC75]

17 An entity shall combine two or more contracts entered into at or near the same time [Refer also: Basis for Conclusions paragraph BC72] with the same customer (or related parties of the customer) [Refer also: Basis for Conclusions paragraph BC74] and account for the contracts as a single contract if one or more of the following criteria are met:

(a) the contracts are negotiated as a package with a single commercial objective;

(b) the amount of consideration to be paid in one contract depends on the price or performance of the other contract; or
the goods or services promised in the contracts (or some goods or services promised in each of the contracts) are a single performance obligation in accordance with paragraphs 22–30. [Refer also: Basis for Conclusions paragraph BC73]

Contract modifications

[Refer: paragraph 90
Basis for Conclusions paragraphs BC76–BC81
Illustrative Examples, examples 5–9]

A contract modification is a change in the scope or price (or both) of a contract that is approved by the parties to the contract. In some industries and jurisdictions, a contract modification may be described as a change order, a variation or an amendment. A contract modification exists when the parties to a contract approve a modification that either creates new or changes existing enforceable rights and obligations of the parties to the contract. [Refer also: Basis for Conclusions paragraph BC81(a)] A contract modification could be approved in writing, by oral agreement or implied by customary business practices. If the parties to the contract have not approved a contract modification, an entity shall continue to apply this Standard to the existing contract until the contract modification is approved.

A contract modification may exist even though the parties to the contract have a dispute about the scope or price (or both) of the modification or the parties have approved a change in the scope of the contract but have not yet determined the corresponding change in price. In determining whether the rights and obligations that are created or changed by a modification are enforceable, [Refer also: Basis for Conclusions paragraph BC81(a)] an entity shall consider all relevant facts and circumstances including the terms of the contract and other evidence. If the parties to a contract have approved a change in the scope of the contract but have not yet determined the corresponding change in price, an entity shall estimate the change to the transaction price arising [Refer also: Basis for Conclusions paragraph BC81(b)] from the modification in accordance with paragraphs 50–54 on estimating variable consideration and paragraphs 56–58 on constraining estimates of variable consideration.

An entity shall account for a contract modification as a separate contract if both of the following conditions are present:

(a) the scope of the contract increases because of the addition of promised goods or services that are distinct (in accordance with paragraphs 26–30); and

(b) the price of the contract increases by an amount of consideration that reflects the entity’s stand-alone selling prices of the additional promised goods or services and any appropriate adjustments to that price to reflect the circumstances of the particular contract. For example, an entity may adjust the stand-alone selling price of an additional good or service for a discount that the customer receives, because it is not necessary for the
entity to incur the selling-related costs that it would incur when selling a similar good or service to a new customer.

[Refer also:
Basis for Conclusions paragraph BC77
Illustrative Examples, example 5 Case A]

21 If a contract modification is not accounted for as a separate contract in accordance with paragraph 20, an entity shall account for the promised goods or services not yet transferred at the date of the contract modification (ie the remaining promised goods or services) in whichever of the following ways is applicable:

(a) An entity shall account for the contract modification as if it were a termination of the existing contract and the creation of a new contract, if the remaining goods or services are distinct from the goods or services transferred on or before the date of the contract modification. The amount of consideration to be allocated to the remaining performance obligations (or to the remaining distinct goods or services in a single performance obligation identified in accordance with paragraph 22(b)) is the sum of:
   (i) the consideration promised by the customer (including amounts already received from the customer) that was included in the estimate of the transaction price and that had not been recognised as revenue; and
   (ii) the consideration promised as part of the contract modification.

[Refer also:
Basis for Conclusions paragraphs BC78, BC79 and BC81(c)
Illustrative Examples, example 5 Case B and examples 6 and 7]

(b) An entity shall account for the contract modification as if it were a part of the existing contract if the remaining goods or services are not distinct and, therefore, form part of a single performance obligation that is partially satisfied at the date of the contract modification. The effect that the contract modification has on the transaction price, and on the entity’s measure of progress towards complete satisfaction of the performance obligation, is recognised as an adjustment to revenue (either as an increase in or a reduction of revenue) at the date of the contract modification (ie the adjustment to revenue is made on a cumulative catch-up basis). [Refer also: Basis for Conclusions paragraphs BC80 and BC81(c) and Illustrative Examples, examples 8 and 9]

(c) If the remaining goods or services are a combination of items (a) and (b), then the entity shall account for the effects of the modification on the unsatisfied (including partially unsatisfied) performance obligations in the modified contract in a manner that is consistent with the objectives of this paragraph.
Identifying performance obligations

At contract inception, an entity shall assess the goods or services promised in a contract with a customer and shall identify as a performance obligation each promise to transfer to the customer either:

(a) a good or service (or a bundle of goods or services) that is distinct; or

(b) a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the customer (see paragraph 23). [Refer also: Basis for Conclusions paragraphs BC113–BC116 and Illustrative Examples, example 7 paragraph IE34 and example 13]

A series of distinct goods or services has the same pattern of transfer to the customer if both of the following criteria are met:

(a) each distinct good or service in the series that the entity promises to transfer to the customer would meet the criteria in paragraph 35 to be a performance obligation satisfied over time; and

(b) in accordance with paragraphs 39–40, the same method would be used to measure the entity’s progress towards complete satisfaction of the performance obligation to transfer each distinct good or service in the series to the customer.

Promises in contracts with customers

A contract with a customer generally explicitly states the goods or services that an entity promises to transfer to a customer. However, the performance obligations identified in a contract with a customer may not be limited to the goods or services that are explicitly stated in that contract. This is because a contract with a customer may also include promises that are implied by an entity’s customary business practices, published policies or specific statements if, at the time of entering into the contract, those promises create a valid expectation of the customer that the entity will transfer a good or service to the customer. [Refer also: Basis for Conclusions paragraphs BC87–BC89]

Performance obligations do not include activities that an entity must undertake to fulfil a contract unless those activities transfer a good or service to a customer. For example, a services provider may need to perform various administrative tasks to set up a contract. The performance of those tasks does not transfer a service to the customer as the tasks are performed. Therefore, those setup activities are not a performance obligation. [Refer also: Basis for Conclusions paragraph BC93]

Distinct goods or services

Depending on the contract, promised goods or services may include, but are not limited to, the following:
(a) sale of goods produced by an entity (for example, inventory of a manufacturer);
(b) resale of goods purchased by an entity (for example, merchandise of a retailer);
(c) resale of rights to goods or services purchased by an entity (for example, a ticket resold by an entity acting as a principal, as described in paragraphs B34–B38);
(d) performing a contractually agreed-upon task (or tasks) for a customer;
(e) providing a service of standing ready to provide goods or services (for example, unspecified updates to software that are provided on a when-and-if-available basis) or of making goods or services available for a customer to use as and when the customer decides; [Refer: Basis for Conclusions paragraph BC91]
(f) providing a service of arranging for another party to transfer goods or services to a customer (for example, acting as an agent of another party, as described in paragraphs B34–B38);
(g) granting rights to goods or services to be provided in the future that a customer can resell or provide to its customer (for example, an entity selling a product to a retailer promises to transfer an additional good or service to an individual who purchases the product from the retailer); [Refer: Basis for Conclusions paragraphs BC91 and BC92 and Illustrative Examples, example 12 Case A and B]
(h) constructing, manufacturing or developing an asset on behalf of a customer;
(i) granting licences (see paragraphs B52–B63); and
(j) granting options to purchase additional goods or services (when those options provide a customer with a material right, as described in paragraphs B39–B43).

27 A good or service that is promised to a customer is distinct if both of the following criteria are met:

(a) the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (ie the good or service is capable of being distinct); [Refer: Basis for Conclusions paragraphs BC97–BC101] and

(b) the entity’s promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (ie the good or service is distinct within the context of the contract). [Refer: Basis for Conclusions paragraphs BC102 and BC105]

[Refer also: Illustrative Examples, examples 5, 7 paragraph IE34, 11, 44, 50, 52, 56 Case B, 57 and 63]
[Link to Illustrative Examples, examples 8 paragraph IE40, 10, 55, 56 Case A and 58 for examples where the goods and services are not distinct]

28 A customer can benefit from a good or service in accordance with paragraph 27(a) if the good or service could be used, consumed, sold for an
amount that is greater than scrap value or otherwise held in a way that generates economic benefits. For some goods or services, a customer may be able to benefit from a good or service on its own. For other goods or services, a customer may be able to benefit from the good or service only in conjunction with other readily available resources. A readily available resource is a good or service that is sold separately (by the entity or another entity) or a resource that the customer has already obtained from the entity (including goods or services that the entity will have already transferred to the customer under the contract) or from other transactions or events. Various factors may provide evidence that the customer can benefit from a good or service either on its own or in conjunction with other readily available resources. For example, the fact that the entity regularly sells a good or service separately would indicate that a customer can benefit from the good or service on its own or with other readily available resources. [Refer: Basis for Conclusions paragraphs BC99–BC105]

29 Factors that indicate that an entity’s promise to transfer a good or service to a customer is separately identifiable (in accordance with paragraph 27(b)) include, but are not limited to, the following: [Refer: Basis for Conclusions paragraph BC106]

(a) the entity does not provide a significant service of integrating the good or service with other goods or services promised in the contract into a bundle of goods or services that represent the combined output for which the customer has contracted. In other words, the entity is not using the good or service as an input to produce or deliver the combined output specified by the customer. [Refer: Basis for Conclusions paragraphs BC107 and BC108]

(b) the good or service does not significantly modify or customise another good or service promised in the contract. [Refer: Basis for Conclusions paragraphs BC109 and BC110]

(c) the good or service is not highly dependent on, or highly interrelated with, other goods or services promised in the contract. For example, the fact that a customer could decide to not purchase the good or service without significantly affecting the other promised goods or services in the contract might indicate that the good or service is not highly dependent on, or highly interrelated with, those other promised goods or services. [Refer: Basis for Conclusions paragraphs BC111 and BC112]

30 If a promised good or service is not distinct, an entity shall combine that good or service with other promised goods or services until it identifies a bundle of goods or services that is distinct. In some cases, that would result in the entity accounting for all the goods or services promised in a contract as a single performance obligation.
Satisfaction of performance obligations

31 An entity shall recognise revenue when (or as) the entity satisfies a performance obligation by transferring a promised good or service (ie an asset) to a customer. An asset is transferred when (or as) the customer obtains control of that asset.

[Refer: Basis for Conclusions paragraphs BC117–BC119]
[Link to Basis for Conclusions paragraph BC148 for the reasons for rejecting the right to payment as a separate revenue recognition criterion]

32 For each performance obligation identified in accordance with paragraphs 22–30, an entity shall determine at contract inception whether it satisfies the performance obligation over time (in accordance with paragraphs 35–37) or satisfies the performance obligation at a point in time (in accordance with paragraph 38). If an entity does not satisfy a performance obligation over time, the performance obligation is satisfied at a point in time.

[Link to paragraphs B56–B63]

33 Goods and services are assets, even if only momentarily, when they are received and used (as in the case of many services). Control of an asset refers to the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. [Refer: Basis for Conclusions paragraphs BC120 and BC121] Control includes the ability to prevent other entities from directing the use of, and obtaining the benefits from, an asset. The benefits of an asset are the potential cash flows (inflows or savings in outflows) that can be obtained directly or indirectly in many ways, such as by:

(a) using the asset to produce goods or provide services (including public services);
(b) using the asset to enhance the value of other assets;
(c) using the asset to settle liabilities or reduce expenses;
(d) selling or exchanging the asset;
(e) pledging the asset to secure a loan; and
(f) holding the asset.

34 When evaluating whether a customer obtains control of an asset, an entity shall consider any agreement to repurchase the asset (see paragraphs B64–B76).

Performance obligations satisfied over time

[Refer:
Basis for Conclusions paragraphs BC122–BC124
Illustrative Examples, examples 13–17]

35 An entity transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

(a) the customer simultaneously receives and consumes the benefits provided by the entity’s performance as the entity performs (see paragraphs B3–B4); [Refer: Basis for Conclusions paragraphs BC125–BC128 and Illustrative Examples, examples 13, 18, 55, 57, 58 and 61]
(b) the entity’s performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); [Refer: Basis for Conclusions paragraphs BC129–BC131 and Illustrative Examples, example 8 paragraph IE37] or

(c) the entity’s performance does not create an asset with an alternative use [Refer: Basis for Conclusions paragraphs BC134–BC141] to the entity (see paragraph 36) and the entity has an enforceable right to payment for performance completed to date (see paragraph 37). [Refer: Basis for Conclusions paragraphs BC142–BC147 and Illustrative Examples, examples 14–17]

[Link to Basis for Conclusions paragraphs BC149–BC152 for the agreements for the construction of real estate]

An asset created by an entity’s performance does not have an alternative use to an entity if the entity is either restricted contractually from readily directing the asset for another use during the creation or enhancement of that asset or limited practically from readily directing the asset in its completed state for another use. The assessment of whether an asset has an alternative use to the entity is made at contract inception. After contract inception, an entity shall not update the assessment of the alternative use of an asset unless the parties to the contract approve a contract modification that substantively changes the performance obligation. Paragraphs B6–B8 provide guidance for assessing whether an asset has an alternative use to an entity.

An entity shall consider the terms of the contract, as well as any laws that apply to the contract, when evaluating whether it has an enforceable right to payment for performance completed to date in accordance with paragraph 35(c). The right to payment for performance completed to date does not need to be for a fixed amount. However, at all times throughout the duration of the contract, the entity must be entitled to an amount that at least compensates the entity for performance completed to date if the contract is terminated by the customer or another party for reasons other than the entity’s failure to perform as promised. Paragraphs B9–B13 provide guidance for assessing the existence and enforceability of a right to payment and whether an entity’s right to payment would entitle the entity to be paid for its performance completed to date.

**Performance obligations satisfied at a point in time**

[Refer: Basis for Conclusions paragraphs BC153–BC157]

If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, an entity satisfies the performance obligation at a point in time. [Refer also: Illustrative Examples, examples 16, 17 Case A and 59] To determine the point in time at which a customer obtains control of a promised asset and the entity satisfies a performance obligation, the entity shall consider the requirements for control in paragraphs 31–34. In addition, an entity shall consider indicators of the transfer of control, [Refer also: Basis for Conclusions paragraph BC155] which include, but are not limited to, the following:

(a) The entity has a present right to payment for the asset—if a customer is presently obliged to pay for an asset, then that may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset in exchange.
(b) The customer has legal title to the asset—legal title may indicate which party to a contract has the ability to direct the use of, and obtain substantially all of the remaining benefits from, an asset or to restrict the access of other entities to those benefits. Therefore, the transfer of legal title of an asset may indicate that the customer has obtained control of the asset. If an entity retains legal title solely as protection against the customer’s failure to pay, those rights of the entity would not preclude the customer from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset—the customer’s physical possession of an asset may indicate that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset or to restrict the access of other entities to those benefits. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a customer or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the customer controls. [Refer also: Illustrative Examples, example 63] Paragraphs B64–B76, B77–B78 and B79–B82 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The customer has the significant risks and rewards of ownership of the asset—the transfer of the significant risks and rewards of ownership of an asset to the customer may indicate that the customer has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation in addition to the performance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a customer but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The customer has accepted the asset—the customer’s acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. To evaluate the effect of a contractual customer acceptance clause on when control of an asset is transferred, an entity shall consider the guidance in paragraphs B83–B86.

Measuring progress towards complete satisfaction of a performance obligation

[Refer: Basis for Conclusions paragraphs BC158–BC180]

For each performance obligation satisfied over time in accordance with paragraphs 35–37, an entity shall recognise revenue over time by measuring the progress towards complete satisfaction of that performance obligation. The objective when measuring progress is to depict an entity’s performance in
transferring control of goods or services promised to a customer (ie the satisfaction of an entity’s performance obligation).

[Refer also: paragraph 58 and Illustrative Examples, examples 18, 19, 57 and 58]

An entity shall apply a single method of measuring progress for each performance obligation satisfied over time and the entity shall apply that method consistently to similar performance obligations and in similar circumstances. At the end of each reporting period, an entity shall remeasure its progress towards complete satisfaction of a performance obligation satisfied over time. [Refer also: Basis for Conclusions paragraphs BC159 and BC161]

**Methods for measuring progress**

Appropriate methods of measuring progress include output methods and input methods. [Refer: Basis for Conclusions paragraph BC162 and Illustrative Examples, examples 18, 19, 31 and 57] Paragraphs B14–B19 provide guidance for using output methods and input methods to measure an entity’s progress towards complete satisfaction of a performance obligation. In determining the appropriate method for measuring progress, an entity shall consider the nature of the good or service that the entity promised to transfer to the customer.

When applying a method for measuring progress, an entity shall exclude from the measure of progress any goods or services for which the entity does not transfer control to a customer. Conversely, an entity shall include in the measure of progress any goods or services for which the entity does transfer control to a customer when satisfying that performance obligation.

As circumstances change over time, an entity shall update its measure of progress to reflect any changes in the outcome of the performance obligation. Such changes to an entity’s measure of progress shall be accounted for as a change in accounting estimate in accordance with IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors.

**Reasonable measures of progress**

An entity shall recognise revenue for a performance obligation satisfied over time only if the entity can reasonably measure its progress towards complete satisfaction of the performance obligation. An entity would not be able to reasonably measure its progress towards complete satisfaction of a performance obligation if it lacks reliable information that would be required to apply an appropriate method of measuring progress.

[Refer: Basis for Conclusions paragraph BC179]

In some circumstances (for example, in the early stages of a contract), an entity may not be able to reasonably measure the outcome of a performance obligation, but the entity expects to recover the costs incurred in satisfying the performance obligation. In those circumstances, the entity shall recognise revenue only to the extent of the costs incurred until such time that it can reasonably measure the outcome of the performance obligation.

[Refer: Basis for Conclusions paragraph BC180]
When (or as) a performance obligation is satisfied, an entity shall recognise as revenue the amount of the transaction price (which excludes estimates of variable consideration that are constrained in accordance with paragraphs 56–58) that is allocated to that performance obligation. [Refer: Basis for Conclusions paragraphs BC25–BC27 and BC181–BC183]

Determining the transaction price
[Refer: Basis for Conclusions paragraphs BC184–BC188]

An entity shall consider the terms of the contract and its customary business practices to determine the transaction price. The transaction price is the amount of consideration to which an entity expects to be entitled in exchange for transferring promised goods or services to a customer, excluding amounts collected on behalf of third parties (for example, some sales taxes). The consideration promised in a contract with a customer may include fixed amounts, variable amounts, or both.

The nature, timing and amount of consideration promised by a customer affect the estimate of the transaction price. When determining the transaction price, an entity shall consider the effects of all of the following:

(a) variable consideration (see paragraphs 50–55 and 59);
(b) constraining estimates of variable consideration (see paragraphs 56–58);
(c) the existence of a significant financing component in the contract (see paragraphs 60–65);
(d) non-cash consideration (see paragraphs 66–69); and
(e) consideration payable to a customer (see paragraphs 70–72).
[Refer also: Basis for Conclusions paragraph BC188]

For the purpose of determining the transaction price, an entity shall assume that the goods or services will be transferred to the customer as promised in accordance with the existing contract and that the contract will not be cancelled, renewed or modified.

Variable consideration
[Refer: Illustrative Examples, examples 20 and 21]

If the consideration promised in a contract includes a variable amount, an entity shall estimate the amount of consideration to which the entity will be entitled in exchange for transferring the promised goods or services to a customer. [Refer: Illustrative Examples, example 40]

An amount of consideration can vary because of discounts, rebates, refunds, credits, price concessions, incentives, performance bonuses, penalties or other similar items. The promised consideration can also vary if an entity’s entitlement to the consideration is contingent on the occurrence or non-occurrence of a future event. For example, an amount of consideration...
would be variable if either a product was sold with a right of return or a fixed amount is promised as a performance bonus on achievement of a specified milestone.

[Refer: Basis for Conclusions paragraphs BC190–BC191]

52 The variability relating to the consideration promised by a customer may be explicitly stated in the contract. In addition to the terms of the contract, the promised consideration is variable if either of the following circumstances exists:

(a) the customer has a valid expectation arising from an entity’s customary business practices, published policies or specific statements that the entity will accept an amount of consideration that is less than the price stated in the contract. That is, it is expected that the entity will offer a price concession. Depending on the jurisdiction, industry or customer this offer may be referred to as a discount, rebate, refund or credit. [Refer: Basis for Conclusions paragraph BC192]

(b) other facts and circumstances indicate that the entity’s intention, when entering into the contract with the customer, is to offer a price concession to the customer. [Refer: Illustrative Examples, examples 2 and 3]

[Refer: Basis for Conclusions paragraph BC194]

53 An entity shall estimate an amount of variable consideration by using either of the following methods, depending on which method the entity expects to better predict the amount of consideration to which it will be entitled:

(a) The expected value—the expected value is the sum of probability-weighted amounts in a range of possible consideration amounts. An expected value may be an appropriate estimate of the amount of variable consideration if an entity has a large number of contracts with similar characteristics.

(b) The most likely amount—the most likely amount is the single most likely amount in a range of possible consideration amounts (i.e., the single most likely outcome of the contract). The most likely amount may be an appropriate estimate of the amount of variable consideration if the contract has only two possible outcomes (for example, an entity either achieves a performance bonus or does not).

[Refer: Basis for Conclusions paragraphs BC195–BC201 and BC214 Illustrative Examples, examples 21–23]

54 An entity shall apply one method consistently throughout the contract when estimating the effect of an uncertainty on an amount of variable consideration to which the entity will be entitled. In addition, an entity shall consider all the information (historical, current and forecast) that is reasonably available to the entity and shall identify a reasonable number of possible consideration amounts. The information that an entity uses to estimate the amount of variable consideration would typically be similar to the information that the entity’s management uses during the bid-and-proposal process and in establishing prices for promised goods or services. [Refer: Basis for Conclusions paragraph BC202]
Refund liabilities

An entity shall recognise a refund liability if the entity receives consideration from a customer and expects to refund some or all of that consideration to the customer. A refund liability is measured at the amount of consideration received (or receivable) for which the entity does not expect to be entitled (i.e., amounts not included in the transaction price). The refund liability (and corresponding change in the transaction price and, therefore, the contract liability) shall be updated at the end of each reporting period for changes in circumstances. To account for a refund liability relating to a sale with a right of return, an entity shall apply the guidance in paragraphs B20–B27.

[Refer: Illustrative Examples, examples 22 and 40]

Constraining estimates of variable consideration

[Refer: Basis for Conclusions paragraphs BC214–BC219, Illustrative Examples, examples 22–25]

An entity shall include in the transaction price some or all of an amount of variable consideration estimated in accordance with paragraph 53 only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

[Refer also: Basis for Conclusions paragraphs BC203–BC206, Illustrative Examples, examples 6, 8, 22–26]

In assessing whether it is highly probable [Refer also: Basis for Conclusions paragraphs BC208–BC211] that a significant reversal in the amount of cumulative revenue recognised will not occur once the uncertainty related to the variable consideration is subsequently resolved, an entity shall consider both the likelihood and the magnitude of the revenue reversal. Factors that could increase the likelihood or the magnitude of a revenue reversal include, but are not limited to, any of the following:

(a) the amount of consideration is highly susceptible to factors outside the entity’s influence. Those factors may include volatility in a market, the judgement or actions of third parties, weather conditions and a high risk of obsolescence of the promised good or service.

(b) the uncertainty about the amount of consideration is not expected to be resolved for a long period of time.

(c) the entity’s experience (or other evidence) with similar types of contracts is limited, or that experience (or other evidence) has limited predictive value.

(d) the entity has a practice of either offering a broad range of price concessions or changing the payment terms and conditions of similar contracts in similar circumstances.
(e) the contract has a large number and broad range of possible consideration amounts.

[Refer also:
Basis for Conclusions paragraphs BC212 and BC213
Illustrative Examples, example 8 paragraphs IE38 and IE40 and example 42 Contract C]

An entity shall apply paragraph B63 to account for consideration in the form of a sales-based or usage-based royalty that is promised in exchange for a licence of intellectual property.

[Refer:
Basis for Conclusions paragraph BC219
Illustrative Examples, examples 4, 35, 57, 60 and 61]

Reassessment of variable consideration

At the end of each reporting period, an entity shall update the estimated transaction price (including updating its assessment of whether an estimate of variable consideration is constrained) to represent faithfully the circumstances present at the end of the reporting period and the changes in circumstances during the reporting period. The entity shall account for changes in the transaction price in accordance with paragraphs 87–90.

[Refer: Illustrative Examples, example 24]

The existence of a significant financing component in the contract

[Refer: Illustrative Examples, examples 26–30]

In determining the transaction price, an entity shall adjust the promised amount of consideration for the effects of the time value of money if the timing of payments agreed to by the parties to the contract (either explicitly or implicitly) provides the customer or the entity with a significant benefit of financing the transfer of goods or services to the customer. In those circumstances, the contract contains a significant financing component. A significant financing component may exist regardless of whether the promise of financing is explicitly stated in the contract or implied by the payment terms agreed to by the parties to the contract.

[Refer: Basis for Conclusions paragraph BC231]

[Link to Basis for Conclusions paragraph BC238 for the reasons for not exempting an entity from accounting for the effects of a significant financing component for advance payments]

[Link also to Illustrative Examples, examples 27 and 30 for examples where there is not a significant financing component]

The objective when adjusting the promised amount of consideration for a significant financing component is for an entity to recognise revenue at an amount that reflects the price that a customer would have paid for the promised goods or services if the customer had paid cash for those goods or services when (or as) they transfer to the customer (ie the cash selling price). An entity shall consider all relevant facts and circumstances in assessing whether a contract contains a financing component and whether that financing component is significant to the contract, including both of the following:

(a) the difference, if any, between the amount of promised consideration and the cash selling price of the promised goods or services; and
(b) the combined effect of both of the following:

(i) the expected length of time between when the entity transfers the promised goods or services to the customer and when the customer pays for those goods or services; and

(ii) the prevailing interest rates in the relevant market.

[Refer: Basis for Conclusions paragraph BC232
Illustrative Examples, examples 26, 29 and 63]

62 Notwithstanding the assessment in paragraph 61, a contract with a customer would not have a significant financing component if any of the following factors exist:

(a) the customer paid for the goods or services in advance and the timing of the transfer of those goods or services is at the discretion of the customer.

(b) a substantial amount of the consideration promised by the customer is variable and the amount or timing of that consideration varies on the basis of the occurrence or non-occurrence of a future event that is not substantially within the control of the customer or the entity (for example, if the consideration is a sales-based royalty).

(c) the difference between the promised consideration and the cash selling price of the good or service (as described in paragraph 61) arises for reasons other than the provision of finance to either the customer or the entity, and the difference between those amounts is proportional to the reason for the difference. For example, the payment terms might provide the entity or the customer with protection from the other party failing to adequately complete some or all of its obligations under the contract. [Refer: Illustrative Examples, examples 27 and 30]

[Refer: Basis for Conclusions paragraph BC233]

63 As a practical expedient, an entity need not adjust the promised amount of consideration for the effects of a significant financing component if the entity expects, at contract inception, that the period between when the entity transfers a promised good or service to a customer and when the customer pays for that good or service will be one year or less. [Refer: Basis for Conclusions paragraphs BC235–BC236]

64 To meet the objective in paragraph 61 when adjusting the promised amount of consideration for a significant financing component, an entity shall use the discount rate that would be reflected in a separate financing transaction between the entity and its customer at contract inception. That rate would reflect the credit characteristics of the party receiving financing in the contract, as well as any collateral or security provided by the customer or the entity, including assets transferred in the contract. An entity may be able to determine that rate by identifying the rate that discounts the nominal amount of the promised consideration to the price that the customer would pay in cash for the goods or services when (or as) they transfer to the customer. [Refer: Basis for Conclusions paragraphs BC239–BC241] After contract inception, an entity shall not
update the discount rate for changes in interest rates or other circumstances (such as a change in the assessment of the customer’s credit risk). [Refer: Basis for Conclusions paragraphs BC242–BC243]

An entity shall present the effects of financing (interest revenue or interest expense) separately from revenue from contracts with customers in the statement of comprehensive income. Interest revenue or interest expense is recognised only to the extent that a contract asset (or receivable) or a contract liability is recognised in accounting for a contract with a customer. [Refer: Basis for Conclusions paragraphs BC244–BC247]

**Non-cash consideration**

To determine the transaction price for contracts in which a customer promises consideration in a form other than cash, an entity shall measure the non-cash consideration (or promise of non-cash consideration) at fair value.

[Refer: Illustrative Examples, example 31]

If an entity cannot reasonably estimate the fair value of the non-cash consideration, the entity shall measure the consideration indirectly by reference to the stand-alone selling price of the goods or services promised to the customer (or class of customer) in exchange for the consideration. [Refer also: Basis for Conclusions paragraphs BC248–BC254]

The fair value of the non-cash consideration may vary because of the form of the consideration (for example, a change in the price of a share to which an entity is entitled to receive from a customer). If the fair value of the non-cash consideration promised by a customer varies for reasons other than only the form of the consideration (for example, the fair value could vary because of the entity’s performance), an entity shall apply the requirements in paragraphs 56–58. [Refer also: Basis for Conclusions paragraphs BC250–BC252]

If a customer contributes goods or services (for example, materials, equipment or labour) to facilitate an entity’s fulfilment of the contract, the entity shall assess whether it obtains control of those contributed goods or services. If so, the entity shall account for the contributed goods or services as non-cash consideration received from the customer.

**Consideration payable to a customer**

Consideration payable to a customer includes cash amounts that an entity pays, or expects to pay, to the customer (or to other parties that purchase the entity’s goods or services from the customer). Consideration payable to a customer also includes credit or other items (for example, a coupon or voucher) that can be applied against amounts owed to the entity (or to other parties that purchase the entity’s goods or services from the customer). An entity shall account for consideration payable to a customer as a reduction of the transaction price and, therefore, of revenue unless the payment to the customer is in exchange for a distinct good or service (as described in paragraphs 26–30) that the customer transfers to the entity. If the consideration payable to a customer includes a
variable amount, an entity shall estimate the transaction price (including assessing whether the estimate of variable consideration is constrained) in accordance with paragraphs 50–58.

[Refer: Illustrative Examples, example 32]

71 If consideration payable to a customer is a payment for a distinct good or service from the customer, then an entity shall account for the purchase of the good or service in the same way that it accounts for other purchases from suppliers. [Refer also: Basis for Conclusions paragraph BC256] If the amount of consideration payable to the customer exceeds the fair value of the distinct good or service that the entity receives from the customer, then the entity shall account for such an excess as a reduction of the transaction price. [Refer also: Basis for Conclusions paragraph BC257] If the entity cannot reasonably estimate the fair value of the good or service received from the customer, it shall account for all of the consideration payable to the customer as a reduction of the transaction price.

72 Accordingly, if consideration payable to a customer is accounted for as a reduction of the transaction price, an entity shall recognise the reduction of revenue when (or as) the later of either of the following events occurs:

(a) the entity recognises revenue for the transfer of the related goods or services to the customer; and

(b) the entity pays or promises to pay the consideration (even if the payment is conditional on a future event). That promise might be implied by the entity’s customary business practices.

[Refer also: Basis for Conclusions paragraph BC258]

Allocating the transaction price to performance obligations

73 The objective when allocating the transaction price is for an entity to allocate the transaction price to each performance obligation (or distinct good or service) in an amount that depicts the amount of consideration to which the entity expects to be entitled in exchange for transferring the promised goods or services to the customer.

74 To meet the allocation objective, an entity shall allocate the transaction price to each performance obligation identified in the contract on a relative stand-alone selling price basis [Refer: Basis for Conclusions paragraph BC266] in accordance with paragraphs 76–80, except as specified in paragraphs 81–83 (for allocating discounts) and paragraphs 84–86 (for allocating consideration that includes variable amounts).

[Link to paragraphs B42 and B43]

75 Paragraphs 76–86 do not apply if a contract has only one performance obligation. However, paragraphs 84–86 may apply if an entity promises to transfer a series of distinct goods or services identified as a single performance obligation in accordance with paragraph 22(b) and the promised consideration includes variable amounts.
Allocation based on stand-alone selling prices

To allocate the transaction price to each performance obligation on a relative stand-alone selling price basis, an entity shall determine the stand-alone selling price at contract inception of the distinct good or service underlying each performance obligation in the contract and allocate the transaction price in proportion to those stand-alone selling prices.

The stand-alone selling price is the price at which an entity would sell a promised good or service separately to a customer. The best evidence of a stand-alone selling price is the observable price of a good or service when the entity sells that good or service separately in similar circumstances and to similar customers. A contractually stated price or a list price for a good or service may be (but shall not be presumed to be) the stand-alone selling price of that good or service.

If a stand-alone selling price is not directly observable, an entity shall estimate the stand-alone selling price at an amount that would result in the allocation of the transaction price meeting the allocation objective in paragraph 73. When estimating a stand-alone selling price, an entity shall consider all information (including market conditions, entity-specific factors and information about the customer or class of customer) that is reasonably available to the entity. In doing so, an entity shall maximise the use of observable inputs and apply estimation methods consistently in similar circumstances.

Suitable methods for estimating the stand-alone selling price of a good or service include, but are not limited to, the following:

(a) Adjusted market assessment approach—an entity could evaluate the market in which it sells goods or services and estimate the price that a customer in that market would be willing to pay for those goods or services. That approach might also include referring to prices from the entity’s competitors for similar goods or services and adjusting those prices as necessary to reflect the entity’s costs and margins.

(b) Expected cost plus a margin approach—an entity could forecast its expected costs of satisfying a performance obligation and then add an appropriate margin for that good or service.

(c) Residual approach—an entity may estimate the stand-alone selling price by reference to the total transaction price less the sum of the observable stand-alone selling prices of other goods or services promised in the contract. However, an entity may use a residual approach to estimate, in
accordance with paragraph 78, the stand-alone selling price of a good or service only if one of the following criteria is met: [Refer: Basis for Conclusions paragraphs BC270–BC273]

(i) the entity sells the same good or service to different customers (at or near the same time) for a broad range of amounts (ie the selling price is highly variable because a representative stand-alone selling price is not discernible from past transactions or other observable evidence); or

(ii) the entity has not yet established a price for that good or service and the good or service has not previously been sold on a stand-alone basis (ie the selling price is uncertain).

[Refer: Illustrative Examples, example 34 Cases B and C]

80 A combination of methods may need to be used to estimate the stand-alone selling prices of the goods or services promised in the contract if two or more of those goods or services have highly variable or uncertain stand-alone selling prices. For example, an entity may use a residual approach to estimate the aggregate stand-alone selling price for those promised goods or services with highly variable or uncertain stand-alone selling prices and then use another method to estimate the stand-alone selling prices of the individual goods or services relative to that estimated aggregate stand-alone selling price determined by the residual approach. When an entity uses a combination of methods to estimate the stand-alone selling price of each promised good or service in the contract, the entity shall evaluate whether allocating the transaction price at those estimated stand-alone selling prices would be consistent with the allocation objective in paragraph 73 and the requirements for estimating stand-alone selling prices in paragraph 78.

Allocation of a discount
[Refer: Basis for Conclusions paragraphs BC277–BC283]

81 A customer receives a discount for purchasing a bundle of goods or services if the sum of the stand-alone selling prices of those promised goods or services in the contract exceeds the promised consideration in a contract. Except when an entity has observable evidence in accordance with paragraph 82 that the entire discount relates to only one or more, but not all, performance obligations in a contract, the entity shall allocate a discount proportionately to all performance obligations in the contract. [Refer also: Basis for Conclusions paragraph BC280] The proportionate allocation of the discount in those circumstances is a consequence of the entity allocating the transaction price to each performance obligation on the basis of the relative stand-alone selling prices of the underlying distinct goods or services.

[Refer also: Illustrative Examples, example 33]

82 An entity shall allocate a discount entirely to one or more, but not all, performance obligations in the contract if all of the following criteria are met:

(a) the entity regularly sells each distinct good or service (or each bundle of distinct goods or services) in the contract on a stand-alone basis;

© IFRS Foundation
(b) the entity also regularly sells on a stand-alone basis a bundle (or bundles) of some of those distinct goods or services at a discount to the stand-alone selling prices of the goods or services in each bundle; and

(c) the discount attributable to each bundle of goods or services described in paragraph 82(b) is substantially the same as the discount in the contract and an analysis of the goods or services in each bundle provides observable evidence of the performance obligation (or performance obligations) to which the entire discount in the contract belongs.

[Refer also: Illustrative Examples, example 34 Case A]

83 If a discount is allocated entirely to one or more performance obligations in the contract in accordance with paragraph 82, an entity shall allocate the discount before using the residual approach to estimate the stand-alone selling price of a good or service in accordance with paragraph 79(c).

[Refer also: Illustrative Examples, example 34 Case B]

Allocation of variable consideration

[Refer: Basis for Conclusions paragraphs BC278, BC284 and BC285 Illustrative Examples, examples 25 and 35]

84 Variable consideration that is promised in a contract may be attributable to the entire contract or to a specific part of the contract, such as either of the following:

(a) one or more, but not all, performance obligations in the contract (for example, a bonus may be contingent on an entity transferring a promised good or service within a specified period of time); or

(b) one or more, but not all, distinct goods or services promised in a series of distinct goods or services that forms part of a single performance obligation in accordance with paragraph 22(b) (for example, the consideration promised for the second year of a two-year cleaning service contract will increase on the basis of movements in a specified inflation index).

85 An entity shall allocate a variable amount (and subsequent changes to that amount) entirely to a performance obligation or to a distinct good or service that forms part of a single performance obligation in accordance with paragraph 22(b) if both of the following criteria are met:

(a) the terms of a variable payment relate specifically to the entity’s efforts to satisfy the performance obligation or transfer the distinct good or service (or to a specific outcome from satisfying the performance obligation or transferring the distinct good or service); and

(b) allocating the variable amount of consideration entirely to the performance obligation or the distinct good or service is consistent with the allocation objective in paragraph 73 when considering all of the performance obligations and payment terms in the contract.

[Refer also: Illustrative Examples, example 57]
[Link to Illustrative Examples, example 6]
The allocation requirements in paragraphs 73–83 shall be applied to allocate the remaining amount of the transaction price that does not meet the criteria in paragraph 85.

**Changes in the transaction price**  
[Refer: Basis for Conclusions paragraphs BC224–BC228]

After contract inception, the transaction price can change for various reasons, including the resolution of uncertain events or other changes in circumstances that change the amount of consideration to which an entity expects to be entitled in exchange for the promised goods or services.

An entity shall allocate to the performance obligations in the contract any subsequent changes in the transaction price on the same basis as at contract inception. [Refer: Basis for Conclusions paragraph BC286] Consequently, an entity shall not reallocate the transaction price to reflect changes in stand-alone selling prices after contract inception. Amounts allocated to a satisfied performance obligation shall be recognised as revenue, or as a reduction of revenue, in the period in which the transaction price changes.  
[Refer also: Illustrative Examples, example 24]

An entity shall allocate a change in the transaction price entirely to one or more, but not all, performance obligations or distinct goods or services promised in a series that forms part of a single performance obligation in accordance with paragraph 22(b) only if the criteria in paragraph 85 on allocating variable consideration are met.

An entity shall account for a change in the transaction price that arises as a result of a contract modification in accordance with paragraphs 18–21. [Refer: Basis for Conclusions paragraph BC82] However, for a change in the transaction price that occurs after a contract modification, an entity shall apply paragraphs 87–89 to allocate the change in the transaction price in whichever of the following ways is applicable:

(a) An entity shall allocate the change in the transaction price to the performance obligations identified in the contract before the modification if, and to the extent that, the change in the transaction price is attributable to an amount of variable consideration promised before the modification and the modification is accounted for in accordance with paragraph 21(a). [Refer: Basis for Conclusions paragraph BC83 and Illustrative Examples, example 6 paragraph IE30]

(b) In all other cases in which the modification was not accounted for as a separate contract in accordance with paragraph 20, an entity shall allocate the change in the transaction price to the performance obligations in the modified contract (ie the performance obligations that were unsatisfied or partially unsatisfied immediately after the modification).
Contract costs

Incremental costs of obtaining a contract

[Refer:
Basis for Conclusions paragraphs BC297–BC303
Illustrative Examples, examples 36 and 37]

91 An entity shall recognise as an asset the incremental costs of obtaining a contract with a customer if the entity expects to recover those costs.

92 The incremental costs of obtaining a contract are those costs that an entity incurs to obtain a contract with a customer that it would not have incurred if the contract had not been obtained (for example, a sales commission).

93 Costs to obtain a contract that would have been incurred regardless of whether the contract was obtained shall be recognised as an expense when incurred, unless those costs are explicitly chargeable to the customer regardless of whether the contract is obtained.

94 As a practical expedient, an entity may recognise the incremental costs of obtaining a contract as an expense when incurred if the amortisation period of the asset that the entity otherwise would have recognised is one year or less.

Costs to fulfil a contract

[Refer:
Basis for Conclusions paragraphs BC304–BC308
Illustrative Examples, example 37]

95 If the costs incurred in fulfilling a contract with a customer are not within the scope of another Standard (for example, IAS 2 Inventories, IAS 16 Property, Plant and Equipment or IAS 38 Intangible Assets), an entity shall recognise an asset from the costs incurred to fulfil a contract only if those costs meet all of the following criteria:

(a) the costs relate directly to a contract or to an anticipated contract that the entity can specifically identify (for example, costs relating to services to be provided under renewal of an existing contract or costs of designing an asset to be transferred under a specific contract that has not yet been approved);

(b) the costs generate or enhance resources of the entity that will be used in satisfying (or in continuing to satisfy) performance obligations in the future; and

(c) the costs are expected to be recovered.

96 For costs incurred in fulfilling a contract with a customer that are within the scope of another Standard, an entity shall account for those costs in accordance with those other Standards.

97 Costs that relate directly to a contract (or a specific anticipated contract) include any of the following:

(a) direct labour (for example, salaries and wages of employees who provide the promised services directly to the customer);
direct materials (for example, supplies used in providing the promised services to a customer); allocations of costs that relate directly to the contract or to contract activities (for example, costs of contract management and supervision, insurance and depreciation of tools and equipment used in fulfilling the contract); costs that are explicitly chargeable to the customer under the contract; and other costs that are incurred only because an entity entered into the contract (for example, payments to subcontractors).

An entity shall recognise the following costs as expenses when incurred:

(a) general and administrative costs (unless those costs are explicitly chargeable to the customer under the contract, in which case an entity shall evaluate those costs in accordance with paragraph 97);
(b) costs of wasted materials, labour or other resources to fulfil the contract that were not reflected in the price of the contract;
(c) costs that relate to satisfied performance obligations (or partially satisfied performance obligations) in the contract (ie costs that relate to past performance); and
(d) costs for which an entity cannot distinguish whether the costs relate to unsatisfied performance obligations or to satisfied performance obligations (or partially satisfied performance obligations).

Amortisation and impairment

An asset recognised in accordance with paragraph 91 or 95 shall be amortised on a systematic basis that is consistent with the transfer to the customer of the goods or services to which the asset relates. The asset may relate to goods or services to be transferred under a specific anticipated contract (as described in paragraph 95(a)).

An entity shall update the amortisation to reflect a significant change in the entity’s expected timing of transfer to the customer of the goods or services to which the asset relates. Such a change shall be accounted for as a change in accounting estimate in accordance with IAS 8.

An entity shall recognise an impairment loss in profit or loss to the extent that the carrying amount of an asset recognised in accordance with paragraph 91 or 95 exceeds:

(a) the remaining amount of consideration that the entity expects to receive in exchange for the goods or services to which the asset relates; less
(b) the costs that relate directly to providing those goods or services and that have not been recognised as expenses (see paragraph 97).
For the purposes of applying paragraph 101 to determine the amount of consideration that an entity expects to receive, an entity shall use the principles for determining the transaction price (except for the requirements in paragraphs 56–58 on constraining estimates of variable consideration) and adjust that amount to reflect the effects of the customer’s credit risk.

Before an entity recognises an impairment loss for an asset recognised in accordance with paragraph 91 or 95, the entity shall recognise any impairment loss for assets related to the contract that are recognised in accordance with another Standard (for example, IAS 2, IAS 16 and IAS 38). After applying the impairment test in paragraph 101, an entity shall include the resulting carrying amount of the asset recognised in accordance with paragraph 91 or 95 in the carrying amount of the cash-generating unit to which it belongs for the purpose of applying IAS 36 Impairment of Assets to that cash-generating unit.

An entity shall recognise in profit or loss a reversal of some or all of an impairment loss previously recognised in accordance with paragraph 101 when the impairment conditions no longer exist or have improved. The increased carrying amount of the asset shall not exceed the amount that would have been determined (net of amortisation) if no impairment loss had been recognised previously.

**Presentation**

When either party to a contract has performed, an entity shall present the contract in the statement of financial position as a contract asset or a contract liability, depending on the relationship between the entity’s performance and the customer’s payment. An entity shall present any unconditional rights to consideration separately as a receivable.

If a customer pays consideration, or an entity has a right to an amount of consideration that is unconditional (i.e., a receivable), before the entity transfers a good or service to the customer, the entity shall present the contract as a contract liability when the payment is made or the payment is due (whichever is earlier). A contract liability is an entity’s obligation to transfer goods or services to a customer for which the entity has received consideration (or an amount of consideration is due) from the customer.

If an entity performs by transferring goods or services to a customer before the customer pays consideration or before payment is due, the entity shall present the contract as a contract asset, excluding any amounts presented as a receivable. A contract asset is an entity’s right to consideration in exchange for goods or services that the entity has transferred to a customer. An entity shall assess a contract asset for impairment in accordance with IFRS 9.
impairment of a contract asset shall be measured, presented and disclosed on the same basis as a financial asset that is within the scope of IFRS 9 (see also paragraph 113(b)).

[Refer also:
Basis for Conclusions paragraph BC322
Illustrative Examples, example 39]

108 A receivable is an entity’s right to consideration that is unconditional. A right to consideration is unconditional if only the passage of time is required before payment of that consideration is due. [Refer: Basis for Conclusions paragraphs BC323–BC326] For example, an entity would recognise a receivable if it has a present right to payment even though that amount may be subject to refund in the future. An entity shall account for a receivable in accordance with IFRS 9. Upon initial recognition of a receivable from a contract with a customer, any difference between the measurement of the receivable in accordance with IFRS 9 and the corresponding amount of revenue recognised shall be presented as an expense (for example, as an impairment loss).

[Refer also: Illustrative Examples, examples 39 and 40]

109 This Standard uses the terms ‘contract asset’ and ‘contract liability’ but does not prohibit an entity from using alternative descriptions in the statement of financial position for those items. If an entity uses an alternative description for a contract asset, the entity shall provide sufficient information for a user of the financial statements to distinguish between receivables and contract assets.

[Refer: Basis for Conclusions paragraphs BC320]

Disclosure

[Refer: Basis for Conclusions paragraphs BC327–BC361]

110 The objective of the disclosure requirements is for an entity to disclose sufficient information to enable users of financial statements to understand the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers. To achieve that objective, an entity shall disclose qualitative and quantitative information about all of the following:

(a) its contracts with customers (see paragraphs 113–122);

(b) the significant judgements, and changes in the judgements, made in applying this Standard to those contracts (see paragraphs 123–126); and

(c) any assets recognised from the costs to obtain or fulfil a contract with a customer in accordance with paragraph 91 or 95 (see paragraphs 127–128).

111 An entity shall consider the level of detail necessary to satisfy the disclosure objective and how much emphasis to place on each of the various requirements. An entity shall aggregate or disaggregate disclosures so that useful information is not obscured by either the inclusion of a large amount of insignificant detail or the aggregation of items that have substantially different characteristics. [Refer also: Basis for Conclusions paragraph BC331]
An entity need not disclose information in accordance with this Standard if it has provided the information in accordance with another Standard.

**Contracts with customers**

[Refer: Basis for Conclusions paragraphs BC332–BC334]

An entity shall disclose all of the following amounts for the reporting period unless those amounts are presented separately in the statement of comprehensive income in accordance with other Standards:

(a) revenue recognised from contracts with customers, which the entity shall disclose separately from its other sources of revenue; and

(b) any impairment losses recognised (in accordance with IFRS 9) on any receivables or contract assets arising from an entity’s contracts with customers, which the entity shall disclose separately from impairment losses from other contracts. [Refer also: Basis for Conclusions paragraph BC264]

**Disaggregation of revenue**

[Refer: Basis for Conclusions paragraphs BC335–BC340
Illustrative Examples, example 41]

An entity shall disaggregate revenue recognised from contracts with customers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. An entity shall apply the guidance in paragraphs B87–B89 when selecting the categories to use to disaggregate revenue.

In addition, an entity shall disclose sufficient information to enable users of financial statements to understand the relationship between the disclosure of disaggregated revenue (in accordance with paragraph 114) and revenue information that is disclosed for each reportable segment, if the entity applies IFRS 8 Operating Segments.

**Contract balances**

[Refer: Basis for Conclusions paragraphs BC346 and BC347]

An entity shall disclose all of the following:

(a) the opening and closing balances of receivables, contract assets and contract liabilities from contracts with customers, if not otherwise separately presented or disclosed;

(b) revenue recognised in the reporting period that was included in the contract liability balance at the beginning of the period; and

(c) revenue recognised in the reporting period from performance obligations satisfied (or partially satisfied) in previous periods (for example, changes in transaction price).

An entity shall explain how the timing of satisfaction of its performance obligations (see paragraph 119(a)) relates to the typical timing of payment (see paragraph 119(b)) and the effect that those factors have on the contract asset and the contract liability balances. The explanation provided may use qualitative information.
An entity shall provide an explanation of the significant changes in the contract asset and the contract liability balances during the reporting period. The explanation shall include qualitative and quantitative information. Examples of changes in the entity’s balances of contract assets and contract liabilities include any of the following:

(a) changes due to business combinations;
(b) cumulative catch-up adjustments to revenue that affect the corresponding contract asset or contract liability, including adjustments arising from a change in the measure of progress, a change in an estimate of the transaction price (including any changes in the assessment of whether an estimate of variable consideration is constrained) or a contract modification;
(c) impairment of a contract asset;
(d) a change in the time frame for a right to consideration to become unconditional (ie for a contract asset to be reclassified to a receivable); and
(e) a change in the time frame for a performance obligation to be satisfied (ie for the recognition of revenue arising from a contract liability).

Performance obligations

An entity shall disclose information about its performance obligations in contracts with customers, including a description of all of the following:

(a) when the entity typically satisfies its performance obligations (for example, upon shipment, upon delivery, as services are rendered or upon completion of service), including when performance obligations are satisfied in a bill-and-hold arrangement;
(b) the significant payment terms (for example, when payment is typically due, whether the contract has a significant financing component, whether the consideration amount is variable and whether the estimate of variable consideration is typically constrained in accordance with paragraphs 56–58);
(c) the nature of the goods or services that the entity has promised to transfer, highlighting any performance obligations to arrange for another party to transfer goods or services (ie if the entity is acting as an agent);
(d) obligations for returns, refunds and other similar obligations; and
(e) types of warranties and related obligations.

Transaction price allocated to the remaining performance obligations

An entity shall disclose the following information about its remaining performance obligations:
the aggregate amount of the transaction price allocated to the performance obligations that are unsatisfied (or partially unsatisfied) as of the end of the reporting period; and

(b) an explanation of when the entity expects to recognise as revenue the amount disclosed in accordance with paragraph 120(a), which the entity shall disclose in either of the following ways:

(i) on a quantitative basis using the time bands that would be most appropriate for the duration of the remaining performance obligations; [Refer: Illustrative Examples, example 42 Contracts B and C] or

(ii) by using qualitative information. [Refer: Illustrative Examples, example 43]

[Refer also: Basis for Conclusions paragraphs BC51 and BC348–BC350]

121 As a practical expedient, an entity need not disclose the information in paragraph 120 for a performance obligation if either of the following conditions is met:

(a) the performance obligation is part of a contract that has an original expected duration of one year or less; or

(b) the entity recognises revenue from the satisfaction of the performance obligation in accordance with paragraph B16. [Refer: Illustrative Examples, example 42 Contract A]

[Refer: Basis for Conclusions paragraph BC352]

122 An entity shall explain qualitatively whether it is applying the practical expedient in paragraph 121 and whether any consideration from contracts with customers is not included in the transaction price and, therefore, not included in the information disclosed in accordance with paragraph 120. For example, an estimate of the transaction price would not include any estimated amounts of variable consideration that are constrained (see paragraphs 56–58).

[Refer: Illustrative Examples, example 42 Contract C]

Significant judgements in the application of this Standard

[Refer: Basis for Conclusions paragraph BC355]

123 An entity shall disclose the judgements, and changes in the judgements, made in applying this Standard that significantly affect the determination of the amount and timing of revenue from contracts with customers. In particular, an entity shall explain the judgements, and changes in the judgements, used in determining both of the following:

(a) the timing of satisfaction of performance obligations (see paragraphs 124–125); and

(b) the transaction price and the amounts allocated to performance obligations (see paragraph 126).

Determining the timing of satisfaction of performance obligations

124 For performance obligations that an entity satisfies over time, an entity shall disclose both of the following:
the methods used to recognise revenue (for example, a description of the output methods or input methods used and how those methods are applied); and

(b) an explanation of why the methods used provide a faithful depiction of the transfer of goods or services.

For performance obligations satisfied at a point in time, an entity shall disclose the significant judgements made in evaluating when a customer obtains control of promised goods or services.

Determining the transaction price and the amounts allocated to performance obligations

An entity shall disclose information about the methods, inputs and assumptions used for all of the following:

(a) determining the transaction price, which includes, but is not limited to, estimating variable consideration, adjusting the consideration for the effects of the time value of money and measuring non-cash consideration;

(b) assessing whether an estimate of variable consideration is constrained;

(c) allocating the transaction price, including estimating stand-alone selling prices of promised goods or services and allocating discounts and variable consideration to a specific part of the contract (if applicable); and

(d) measuring obligations for returns, refunds and other similar obligations.

Assets recognised from the costs to obtain or fulfil a contract with a customer

An entity shall describe both of the following:

(a) the judgements made in determining the amount of the costs incurred to obtain or fulfil a contract with a customer (in accordance with paragraph 91 or 95); and

(b) the method it uses to determine the amortisation for each reporting period.

An entity shall disclose all of the following:

(a) the closing balances of assets recognised from the costs incurred to obtain or fulfil a contract with a customer (in accordance with paragraph 91 or 95), by main category of asset (for example, costs to obtain contracts with customers, pre-contract costs and setup costs); and

(b) the amount of amortisation and any impairment losses recognised in the reporting period.
Practical expedients

If an entity elects to use the practical expedient in either paragraph 63 (about the existence of a significant financing component) or paragraph 94 (about the incremental costs of obtaining a contract), the entity shall disclose that fact.
Appendix A
Defined terms

This appendix is an integral part of the Standard.

contract
An agreement between two or more parties that creates enforceable rights and obligations. [Refer: Basis for Conclusions paragraphs BC31 and BC32]

contract asset
An entity’s right to consideration in exchange for goods or services that the entity has transferred to a customer when that right is conditioned on something other than the passage of time (for example, the entity’s future performance). [Refer: Basis for Conclusions paragraphs BC317–BC322]

contract liability
An entity’s obligation to transfer goods or services to a customer for which the entity has received consideration (or the amount is due) from the customer. [Refer: Basis of Conclusions BC317–BC321]

customer
A party that has contracted with an entity to obtain goods or services that are an output of the entity’s ordinary activities in exchange for consideration. [Refer: Basis for Conclusions paragraphs BC52–BC57]

income
Increases in economic benefits during the accounting period in the form of inflows or enhancements of assets or decreases of liabilities that result in an increase in equity, other than those relating to contributions from equity participants.

performance obligation
A promise in a contract with a customer to transfer to the customer either:

(a) a good or service (or a bundle of goods or services) that is distinct; or

(b) a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the customer. [Refer: Basis for Conclusions paragraphs BC84–BC86]

revenue
Income arising in the course of an entity’s ordinary activities.

stand-alone selling price
The price at which an entity would sell a promised good or service separately to a customer.

transaction price
The amount of consideration to which an entity expects to be entitled in exchange for transferring promised goods or services to a customer, excluding amounts collected on behalf of third parties.
Appendix B
Application Guidance

This appendix is an integral part of the Standard. It describes the application of paragraphs 1–129 and has the same authority as the other parts of the Standard.

B1 This application guidance is organised into the following categories:
(a) performance obligations satisfied over time (paragraphs B2–B13);
(b) methods for measuring progress towards complete satisfaction of a performance obligation (paragraphs B14–B19);
(c) sale with a right of return (paragraphs B20–B27);
(d) warranties (paragraphs B28–B33);
(e) principal versus agent considerations (paragraphs B34–B38);
(f) customer options for additional goods or services (paragraphs B39–B43);
(g) customers’ unexercised rights (paragraphs B44–B47);
(h) non-refundable upfront fees (and some related costs) (paragraphs B48–B51);
(i) licensing (paragraphs B52–B63);
(j) repurchase agreements (paragraphs B64–B76);
(k) consignment arrangements (paragraphs B77–B78);
(l) bill-and-hold arrangements (paragraphs B79–B82);
(m) customer acceptance (paragraphs B83–B86); and
(n) disclosure of disaggregated revenue (paragraphs B87–B89).

Performance obligations satisfied over time
[Refer: Illustrative Examples, examples 13–17]

B2 In accordance with paragraph 35, a performance obligation is satisfied over time if one of the following criteria is met:
(a) the customer simultaneously receives and consumes the benefits provided by the entity’s performance as the entity performs (see paragraphs B3–B4);
(b) the entity’s performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced (see paragraph B5); or
(c) the entity’s performance does not create an asset with an alternative use to the entity (see paragraphs B6–B8) and the entity has an enforceable right to payment for performance completed to date (see paragraphs B9–B13).
Simultaneous receipt and consumption of the benefits of the entity’s performance (paragraph 35(a))

[Refer: Illustrative Examples, examples 13, 18, 55, 57, 58 and 61]

For some types of performance obligations, the assessment of whether a customer receives the benefits of an entity’s performance as the entity performs and simultaneously consumes those benefits as they are received will be straightforward. Examples include routine or recurring services (such as a cleaning service) in which the receipt and simultaneous consumption by the customer of the benefits of the entity’s performance can be readily identified.

[Refer: Illustrative Examples, example 13]

For other types of performance obligations, an entity may not be able to readily identify whether a customer simultaneously receives and consumes the benefits from the entity’s performance as the entity performs. In those circumstances, a performance obligation is satisfied over time if an entity determines that another entity would not need to substantially re-perform the work that the entity has completed to date if that other entity were to fulfil the remaining performance obligation to the customer. In determining whether another entity would not need to substantially re-perform the work the entity has completed to date, an entity shall make both of the following assumptions:

(a) disregard potential contractual restrictions or practical limitations that otherwise would prevent the entity from transferring the remaining performance obligation to another entity; and

(b) presume that another entity fulfilling the remainder of the performance obligation would not have the benefit of any asset that is presently controlled by the entity and that would remain controlled by the entity if the performance obligation were to transfer to another entity.

Customer controls the asset as it is created or enhanced (paragraph 35(b))

[Refer: Illustrative Examples, example 8 paragraph IE37]

In determining whether a customer controls an asset as it is created or enhanced in accordance with paragraph 35(b), an entity shall apply the requirements for control in paragraphs 31–34 and 38. The asset that is being created or enhanced (for example, a work-in-progress asset) could be either tangible or intangible.

Entity’s performance does not create an asset with an alternative use (paragraph 35(c))

[Refer: Illustrative Examples, examples 14–17]

In assessing whether an asset has an alternative use to an entity in accordance with paragraph 36, an entity shall consider the effects of contractual restrictions and practical limitations on the entity’s ability to readily direct that asset for another use, such as selling it to a different customer. The possibility of the contract with the customer being terminated is not a relevant consideration in assessing whether the entity would be able to readily direct the asset for another use.

A contractual restriction on an entity’s ability to direct an asset for another use must be substantive for the asset not to have an alternative use to the entity. A
contractual restriction is substantive if a customer could enforce its rights to the promised asset if the entity sought to direct the asset for another use. In contrast, a contractual restriction is not substantive if, for example, an asset is largely interchangeable with other assets that the entity could transfer to another customer without breaching the contract and without incurring significant costs that otherwise would not have been incurred in relation to that contract.

A practical limitation on an entity’s ability to direct an asset for another use exists if an entity would incur significant economic losses to direct the asset for another use. A significant economic loss could arise because the entity either would incur significant costs to rework the asset or would only be able to sell the asset at a significant loss. For example, an entity may be practically limited from redirecting assets that either have design specifications that are unique to a customer or are located in remote areas.

**Right to payment for performance completed to date (paragraph 35(c))**

[Refer: Illustrative Examples, examples 14–17]

In accordance with paragraph 37, an entity has a right to payment for performance completed to date if the entity would be entitled to an amount that at least compensates the entity for its performance completed to date in the event that the customer or another party terminates the contract for reasons other than the entity’s failure to perform as promised. An amount that would compensate an entity for performance completed to date would be an amount that approximates the selling price of the goods or services transferred to date (for example, recovery of the costs incurred by an entity in satisfying the performance obligation plus a reasonable profit margin) rather than compensation for only the entity’s potential loss of profit if the contract were to be terminated. Compensation for a reasonable profit margin need not equal the profit margin expected if the contract was fulfilled as promised, but an entity should be entitled to compensation for either of the following amounts:

(a) a proportion of the expected profit margin in the contract that reasonably reflects the extent of the entity’s performance under the contract before termination by the customer (or another party); or

(b) a reasonable return on the entity’s cost of capital for similar contracts (or the entity’s typical operating margin for similar contracts) if the contract-specific margin is higher than the return the entity usually generates from similar contracts.

An entity’s right to payment for performance completed to date need not be a present unconditional right to payment. In many cases, an entity will have an unconditional right to payment only at an agreed-upon milestone or upon complete satisfaction of the performance obligation. In assessing whether it has a right to payment for performance completed to date, an entity shall consider whether it would have an enforceable right to demand or retain payment for performance completed to date if the contract were to be terminated before completion for reasons other than the entity’s failure to perform as promised.
In some contracts, a customer may have a right to terminate the contract only at specified times during the life of the contract or the customer might not have any right to terminate the contract. If a customer acts to terminate a contract without having the right to terminate the contract at that time (including when a customer fails to perform its obligations as promised), the contract (or other laws) might entitle the entity to continue to transfer to the customer the goods or services promised in the contract and require the customer to pay the consideration promised in exchange for those goods or services. In those circumstances, an entity has a right to payment for performance completed to date because the entity has a right to continue to perform its obligations in accordance with the contract and to require the customer to perform its obligations (which include paying the promised consideration).

[Refer: Illustrative Examples, example 17 Case C]

In assessing the existence and enforceability of a right to payment for performance completed to date, an entity shall consider the contractual terms as well as any legislation or legal precedent that could supplement or override those contractual terms. This would include an assessment of whether:

(a) legislation, administrative practice or legal precedent confers upon the entity a right to payment for performance to date even though that right is not specified in the contract with the customer;

(b) relevant legal precedent indicates that similar rights to payment for performance completed to date in similar contracts have no binding legal effect; or

(c) an entity’s customary business practices of choosing not to enforce a right to payment has resulted in the right being rendered unenforceable in that legal environment. However, notwithstanding that an entity may choose to waive its right to payment in similar contracts, an entity would continue to have a right to payment to date if, in the contract with the customer, its right to payment for performance to date remains enforceable.

The payment schedule specified in a contract does not necessarily indicate whether an entity has an enforceable right to payment for performance completed to date. [Refer: Illustrative Examples, example 16] Although the payment schedule in a contract specifies the timing and amount of consideration that is payable by a customer, the payment schedule might not necessarily provide evidence of the entity’s right to payment for performance completed to date. This is because, for example, the contract could specify that the consideration received from the customer is refundable for reasons other than the entity failing to perform as promised in the contract.

**Methods for measuring progress towards complete satisfaction of a performance obligation**

Methods that can be used to measure an entity’s progress towards complete satisfaction of a performance obligation satisfied over time in accordance with paragraphs 35–37 include the following:

(a) output methods (see paragraphs B15–B17); and
Input methods (see paragraphs B18–B19).

**Output methods**
[Refer: Basis for Conclusions paragraphs BC163–BC167]

B15 Output methods recognise revenue on the basis of direct measurements of the value to the customer of the goods or services transferred to date relative to the remaining goods or services promised under the contract. Output methods include methods such as surveys of performance completed to date, appraisals of results achieved, milestones reached, time elapsed and units produced or units delivered. When an entity evaluates whether to apply an output method to measure its progress, the entity shall consider whether the output selected would faithfully depict the entity’s performance towards complete satisfaction of the performance obligation. An output method would not provide a faithful depiction of the entity’s performance if the output selected would fail to measure some of the goods or services for which control has transferred to the customer. For example, output methods based on units produced or units delivered would not faithfully depict an entity’s performance in satisfying a performance obligation if, at the end of the reporting period, the entity’s performance has produced work in progress or finished goods controlled by the customer that are not included in the measurement of the output.

B16 As a practical expedient, if an entity has a right to consideration from a customer in an amount that corresponds directly with the value to the customer of the entity’s performance completed to date (for example, a service contract in which an entity bills a fixed amount for each hour of service provided), the entity may recognise revenue in the amount to which the entity has a right to invoice.
[Refer: Basis for Conclusions paragraph BC167
Illustrative Examples, example 42 Contract A]

B17 The disadvantages of output methods are that the outputs used to measure progress may not be directly observable and the information required to apply them may not be available to an entity without undue cost. Therefore, an input method may be necessary.

**Input methods**
[Refer: Basis for Conclusions paragraphs BC168–BC178]

B18 Input methods recognise revenue on the basis of the entity’s efforts or inputs to the satisfaction of a performance obligation (for example, resources consumed, labour hours expended, costs incurred, time elapsed or machine hours used) relative to the total expected inputs to the satisfaction of that performance obligation. If the entity’s efforts or inputs are expended evenly throughout the performance period, it may be appropriate for the entity to recognise revenue on a straight-line basis.

B19 A shortcoming of input methods is that there may not be a direct relationship between an entity’s inputs and the transfer of control of goods or services to a customer. [Refer also: Basis for Conclusions paragraph BC176] Therefore, an entity shall exclude from an input method the effects of any inputs that, in accordance with
the objective of measuring progress in paragraph 39, do not depict the entity's performance in transferring control of goods or services to the customer. For instance, when using a cost-based input method, an adjustment to the measure of progress may be required in the following circumstances:

(a) When a cost incurred does not contribute to an entity’s progress in satisfying the performance obligation. For example, an entity would not recognise revenue on the basis of costs incurred that are attributable to significant inefficiencies in the entity’s performance that were not reflected in the price of the contract (for example, the costs of unexpected amounts of wasted materials, labour or other resources that were incurred to satisfy the performance obligation). [Refer also: Basis for Conclusions paragraphs BC177 and BC178]

(b) When a cost incurred is not proportionate to the entity’s progress in satisfying the performance obligation. In those circumstances, the best depiction of the entity’s performance may be to adjust the input method to recognise revenue only to the extent of that cost incurred. For example, a faithful depiction of an entity’s performance might be to recognise revenue at an amount equal to the cost of a good used to satisfy a performance obligation if the entity expects at contract inception that all of the following conditions would be met:

(i) the good is not distinct;

(ii) the customer is expected to obtain control of the good significantly before receiving services related to the good; [Refer also: Basis for Conclusions paragraphs BC170–BC175]

(iii) the cost of the transferred good is significant relative to the total expected costs to completely satisfy the performance obligation; and

(iv) the entity procures the good from a third party and is not significantly involved in designing and manufacturing the good (but the entity is acting as a principal in accordance with paragraphs B34–B38).

[Refer also: Illustrative Examples, example 19]

Sale with a right of return

[Refer: paragraph 55
Basis for Conclusions paragraphs BC363–BC367]

In some contracts, an entity transfers control of a product to a customer and also grants the customer the right to return the product for various reasons (such as dissatisfaction with the product) and receive any combination of the following:

(a) a full or partial refund of any consideration paid;

(b) a credit that can be applied against amounts owed, or that will be owed, to the entity; and

(c) another product in exchange.
To account for the transfer of products with a right of return (and for some services that are provided subject to a refund), an entity shall recognise all of the following:

(a) revenue for the transferred products in the amount of consideration to which the entity expects to be entitled (therefore, revenue would not be recognised for the products expected to be returned);

(b) a refund liability; and

(c) an asset (and corresponding adjustment to cost of sales) for its right to recover products from customers on settling the refund liability.

An entity’s promise to stand ready to accept a returned product during the return period shall not be accounted for as a performance obligation in addition to the obligation to provide a refund.

An entity shall apply the requirements in paragraphs 47–72 (including the requirements for constraining estimates of variable consideration in paragraphs 56–58) to determine the amount of consideration to which the entity expects to be entitled (ie excluding the products expected to be returned). For any amounts received (or receivable) for which an entity does not expect to be entitled, the entity shall not recognise revenue when it transfers products to customers but shall recognise those amounts received (or receivable) as a refund liability. Subsequently, at the end of each reporting period, the entity shall update its assessment of amounts for which it expects to be entitled in exchange for the transferred products and make a corresponding change to the transaction price and, therefore, in the amount of revenue recognised.

An entity shall update the measurement of the refund liability at the end of each reporting period for changes in expectations about the amount of refunds. An entity shall recognise corresponding adjustments as revenue (or reductions of revenue).

An asset recognised for an entity’s right to recover products from a customer on settling a refund liability shall initially be measured by reference to the former carrying amount of the product (for example, inventory) less any expected costs to recover those products (including potential decreases in the value to the entity of returned products). At the end of each reporting period, an entity shall update the measurement of the asset arising from changes in expectations about products to be returned. An entity shall present the asset separately from the refund liability.

Exchanges by customers of one product for another of the same type, quality, condition and price (for example, one colour or size for another) are not considered returns for the purposes of applying this Standard.

Contracts in which a customer may return a defective product in exchange for a functioning product shall be evaluated in accordance with the guidance on warranties in paragraphs B28–B33.
Warranties
[Refer: Basis for Conclusions paragraphs BC368–BC378]

B28 It is common for an entity to provide (in accordance with the contract, the law or the entity’s customary business practices) a warranty in connection with the sale of a product (whether a good or service). The nature of a warranty can vary significantly across industries and contracts. Some warranties provide a customer with assurance that the related product will function as the parties intended because it complies with agreed-upon specifications. Other warranties provide the customer with a service in addition to the assurance that the product complies with agreed-upon specifications.

B29 If a customer has the option to purchase a warranty separately (for example, because the warranty is priced or negotiated separately), the warranty is a distinct service because the entity promises to provide the service to the customer in addition to the product that has the functionality described in the contract. In those circumstances, an entity shall account for the promised warranty as a performance obligation in accordance with paragraphs 22–30 and allocate a portion of the transaction price to that performance obligation in accordance with paragraphs 73–86. [Refer also: Basis for Conclusions paragraph BC371]

B30 If a customer does not have the option to purchase a warranty separately, an entity shall account for the warranty in accordance with IAS 37 Provisions, Contingent Liabilities and Contingent Assets [Refer also: Basis for Conclusions paragraph BC376] unless the promised warranty, or a part of the promised warranty, provides the customer with a service in addition to the assurance that the product complies with agreed-upon specifications. [Refer also: Basis for Conclusions paragraph BC372] [Refer also: Illustrative Examples, example 44]

B31 In assessing whether a warranty provides a customer with a service in addition to the assurance that the product complies with agreed-upon specifications, an entity shall consider factors such as:

(a) Whether the warranty is required by law—if the entity is required by law to provide a warranty, the existence of that law indicates that the promised warranty is not a performance obligation because such requirements typically exist to protect customers from the risk of purchasing defective products. [Refer: Basis for Conclusions paragraph BC377]

(b) The length of the warranty coverage period—the longer the coverage period, the more likely it is that the promised warranty is a performance obligation because it is more likely to provide a service in addition to the assurance that the product complies with agreed-upon specifications.

(c) The nature of the tasks that the entity promises to perform—if it is necessary for an entity to perform specified tasks to provide the assurance that a product complies with agreed-upon specifications (for example, a return shipping service for a defective product), then those tasks likely do not give rise to a performance obligation.

B32 If a warranty, or a part of a warranty, provides a customer with a service in addition to the assurance that the product complies with agreed-upon
specifications, the promised service is a performance obligation. Therefore, an entity shall allocate the transaction price to the product and the service. If an entity promises both an assurance-type warranty and a service-type warranty but cannot reasonably account for them separately, the entity shall account for both of the warranties together as a single performance obligation.

A law that requires an entity to pay compensation if its products cause harm or damage does not give rise to a performance obligation. For example, a manufacturer might sell products in a jurisdiction in which the law holds the manufacturer liable for any damages (for example, to personal property) that might be caused by a consumer using a product for its intended purpose. Similarly, an entity's promise to indemnify the customer for liabilities and damages arising from claims of patent, copyright, trademark or other infringement by the entity’s products does not give rise to a performance obligation. The entity shall account for such obligations in accordance with IAS 37. [Refer also: Basis for Conclusions paragraph BC378]

## Principal versus agent considerations

[Refer: Basis for Conclusions paragraphs BC379–BC385]

Illustrative Examples, examples 45 and 48 (entity is agent) and examples 46 and 47 (entity is principal)

When another party is involved in providing goods or services to a customer, the entity shall determine whether the nature of its promise is a performance obligation to provide the specified goods or services itself (ie the entity is a principal) or to arrange for the other party to provide those goods or services (ie the entity is an agent).

An entity is a principal if the entity controls a promised good or service before the entity transfers the good or service to a customer. However, an entity is not necessarily acting as a principal if the entity obtains legal title of a product only momentarily before legal title is transferred to a customer. An entity that is a principal in a contract may satisfy a performance obligation by itself or it may engage another party (for example, a subcontractor) to satisfy some or all of a performance obligation on its behalf. When an entity that is a principal satisfies a performance obligation, the entity recognises revenue in the gross amount of consideration to which it expects to be entitled in exchange for those goods or services transferred. [Refer also: Illustrative Examples, example 19]

An entity is an agent if the entity's performance obligation is to arrange for the provision of goods or services by another party. When an entity that is an agent satisfies a performance obligation, the entity recognises revenue in the amount of any fee or commission to which it expects to be entitled in exchange for arranging for the other party to provide its goods or services. An entity’s fee or commission might be the net amount of consideration that the entity retains after paying the other party the consideration received in exchange for the goods or services to be provided by that party.

Indicators that an entity is an agent (and therefore does not control the good or service before it is provided to a customer) include the following:
IFRS 15

(a) another party is primarily responsible for fulfilling the contract;
(b) the entity does not have inventory risk before or after the goods have been ordered by a customer, during shipping or on return;
(c) the entity does not have discretion in establishing prices for the other party’s goods or services and, therefore, the benefit that the entity can receive from those goods or services is limited;
(d) the entity’s consideration is in the form of a commission; and
(e) the entity is not exposed to credit risk for the amount receivable from a customer in exchange for the other party’s goods or services.

[Refer also: Basis for Conclusions paragraph BC382]

B38 If another entity assumes the entity’s performance obligations and contractual rights in the contract so that the entity is no longer obliged to satisfy the performance obligation to transfer the promised good or service to the customer (ie the entity is no longer acting as the principal), the entity shall not recognise revenue for that performance obligation. Instead, the entity shall evaluate whether to recognise revenue for satisfying a performance obligation to obtain a contract for the other party (ie whether the entity is acting as an agent).

Customer options for additional goods or services
[Refer: Basis for Conclusions paragraphs BC386–BC395]

B39 Customer options to acquire additional goods or services for free or at a discount come in many forms, including sales incentives, customer award credits (or points), contract renewal options or other discounts on future goods or services.

B40 If, in a contract, an entity grants a customer the option to acquire additional goods or services, that option gives rise to a performance obligation in the contract only if the option provides a material right to the customer that it would not receive without entering into that contract (for example, a discount that is incremental to the range of discounts typically given for those goods or services to that class of customer in that geographical area or market). If the option provides a material right to the customer, the customer in effect pays the entity in advance for future goods or services and the entity recognises revenue when those future goods or services are transferred or when the option expires.

B41 If a customer has the option to acquire an additional good or service at a price that would reflect the stand-alone selling price for that good or service, that option does not provide the customer with a material right even if the option can be exercised only by entering into a previous contract. In those cases, the entity has made a marketing offer that it shall account for in accordance with this Standard only when the customer exercises the option to purchase the additional goods or services.

[Refer also: Illustrative Examples, example 50]

B42 Paragraph 74 requires an entity to allocate the transaction price to performance obligations on a relative stand-alone selling price basis. If the stand-alone selling price for a customer’s option to acquire additional goods or services is not
directly observable, an entity shall estimate it. That estimate shall reflect the discount that the customer would obtain when exercising the option, adjusted for both of the following:

(a) any discount that the customer could receive without exercising the option; and
(b) the likelihood that the option will be exercised.

[Refer also: Basis for Conclusions paragraphs BC389–BC390 Illustrative Examples, examples 49 and 52]

If a customer has a material right to acquire future goods or services and those goods or services are similar to the original goods or services in the contract and are provided in accordance with the terms of the original contract, then an entity may, as a practical alternative to estimating the stand-alone selling price of the option, allocate the transaction price to the optional goods or services by reference to the goods or services expected to be provided and the corresponding expected consideration. Typically, those types of options are for contract renewals.

[Refer also: Basis for Conclusions paragraphs BC391–BC395 Illustrative Examples, example 51]

Customers’ unexercised rights
[Refer: Basis for Conclusions paragraphs BC396–BC401]

In accordance with paragraph 106, upon receipt of a prepayment from a customer, an entity shall recognise a contract liability in the amount of the prepayment for its performance obligation to transfer, or to stand ready to transfer, goods or services in the future. An entity shall derecognise that contract liability (and recognise revenue) when it transfers those goods or services and, therefore, satisfies its performance obligation.

A customer’s non-refundable prepayment to an entity gives the customer a right to receive a good or service in the future (and obliges the entity to stand ready to transfer a good or service). However, customers may not exercise all of their contractual rights. Those unexercised rights are often referred to as breakage.

If an entity expects to be entitled to a breakage amount in a contract liability, the entity shall recognise the expected breakage amount as revenue in proportion to the pattern of rights exercised by the customer. If an entity does not expect to be entitled to a breakage amount, the entity shall recognise the expected breakage amount as revenue when the likelihood of the customer exercising its remaining rights becomes remote. To determine whether an entity expects to be entitled to a breakage amount, the entity shall consider the requirements in paragraphs 56–58 on constraining estimates of variable consideration.

An entity shall recognise a liability (and not revenue) for any consideration received that is attributable to a customer’s unexercised rights for which the entity is required to remit to another party, for example, a government entity in accordance with applicable unclaimed property laws.
Non-refundable upfront fees (and some related costs)

B48 In some contracts, an entity charges a customer a non-refundable upfront fee at or near contract inception. Examples include joining fees in health club membership contracts, activation fees in telecommunication contracts, setup fees in some services contracts and initial fees in some supply contracts.

B49 To identify performance obligations in such contracts, an entity shall assess whether the fee relates to the transfer of a promised good or service. In many cases, even though a non-refundable upfront fee relates to an activity that the entity is required to undertake at or near contract inception to fulfil the contract, that activity does not result in the transfer of a promised good or service to the customer (see paragraph 25). Instead, the upfront fee is an advance payment for future goods or services and, therefore, would be recognised as revenue when those future goods or services are provided. [Refer: Illustrative Examples, examples 53 and 16] The revenue recognition period would extend beyond the initial contractual period if the entity grants the customer the option to renew the contract and that option provides the customer with a material right as described in paragraph B40.

B50 If the non-refundable upfront fee relates to a good or service, the entity shall evaluate whether to account for the good or service as a separate performance obligation in accordance with paragraphs 22–30.

B51 An entity may charge a non-refundable fee in part as compensation for costs incurred in setting up a contract (or other administrative tasks as described in paragraph 25). If those setup activities do not satisfy a performance obligation, the entity shall disregard those activities (and related costs) when measuring progress in accordance with paragraph B19. That is because the costs of setup activities do not depict the transfer of services to the customer. The entity shall assess whether costs incurred in setting up a contract have resulted in an asset that shall be recognised in accordance with paragraph 95.

Licensing
[Refer: Basis for Conclusions paragraphs BC402–BC421]

B52 A licence establishes a customer’s rights to the intellectual property of an entity. Licences of intellectual property may include, but are not limited to, any of the following:

(a) software and technology;
(b) motion pictures, music and other forms of media and entertainment;
(c) franchises; and
(d) patents, trademarks and copyrights.

B53 In addition to a promise to grant a licence to a customer, an entity may also promise to transfer other goods or services to the customer. Those promises may be explicitly stated in the contract or implied by an entity’s customary business practices, published policies or specific statements (see paragraph 24). As with other types of contracts, when a contract with a customer includes a promise to
grant a licence in addition to other promised goods or services, an entity applies paragraphs 22–30 to identify each of the performance obligations in the contract.

If the promise to grant a licence is not distinct from other promised goods or services in the contract in accordance with paragraphs 26–30, an entity shall account for the promise to grant a licence and those other promised goods or services together as a single performance obligation. [Refer: Illustrative Examples, example 55] Examples of licences that are not distinct from other goods or services promised in the contract include the following:

(a) a licence that forms a component of a tangible good and that is integral to the functionality of the good; and

(b) a licence that the customer can benefit from only in conjunction with a related service (such as an online service provided by the entity that enables, by granting a licence, the customer to access content).

[Refer also: Basis for Conclusions paragraph BC407]

If the licence is not distinct, an entity shall apply paragraphs 31–38 to determine whether the performance obligation (which includes the promised licence) is a performance obligation that is satisfied over time or satisfied at a point in time.

If the promise to grant the licence is distinct from the other promised goods or services in the contract and, therefore, the promise to grant the licence is a separate performance obligation, an entity shall determine whether the licence transfers to a customer either at a point in time or over time. [Link to paragraph B63 and Illustrative Examples, example 60 for sales-based or usage-based royalties] In making this determination, an entity shall consider whether the nature of the entity’s promise in granting the licence to a customer is to provide the customer with either:

(a) a right to access the entity’s intellectual property as it exists throughout the licence period; [Refer: Illustrative Examples, examples 57, 58 and 61] or

(b) a right to use the entity’s intellectual property as it exists at the point in time at which the licence is granted. [Refer: Illustrative Examples, examples 54, 56 Case B and 59]

**Determining the nature of the entity’s promise**

To determine whether an entity’s promise to grant a licence provides a customer with either a right to access an entity’s intellectual property or a right to use an entity’s intellectual property, an entity shall consider whether a customer can direct the use of, and obtain substantially all of the remaining benefits from, a licence at the point in time at which the licence is granted. A customer cannot direct the use of, and obtain substantially all of the remaining benefits from, a licence at the point in time at which the licence is granted if the intellectual property to which the customer has rights changes throughout the licence period. The intellectual property will change (and thus affect the entity’s assessment of when the customer controls the licence) when the entity continues to be involved with its intellectual property and the entity undertakes activities that significantly affect the intellectual property to which the customer has rights. In these cases, the licence provides the customer with a
right to access the entity's intellectual property (see paragraph B58). In contrast, a customer can direct the use of, and obtain substantially all of the remaining benefits from, the licence at the point in time at which the licence is granted if the intellectual property to which the customer has rights will not change (see paragraph B61). In those cases, any activities undertaken by the entity merely change its own asset (i.e., the underlying intellectual property), which may affect the entity's ability to provide future licences; however, those activities would not affect the determination of what the licence provides or what the customer controls. [Refer also: Basis for Conclusions paragraph BC414]

B58 The nature of an entity's promise in granting a licence is a promise to provide a right to access the entity's intellectual property if all of the following criteria are met:

(a) the contract requires, or the customer reasonably expects, that the entity will undertake activities that significantly affect the intellectual property to which the customer has rights (see paragraph B59);

(b) the rights granted by the licence directly expose the customer to any positive or negative effects of the entity’s activities identified in paragraph B58(a); and

(c) those activities do not result in the transfer of a good or a service to the customer as those activities occur (see paragraph 25). [Refer also: Basis for Conclusions paragraphs BC408–BC410, Illustrative Examples, examples 57, 58 and 61]

B59 Factors that may indicate that a customer could reasonably expect that an entity will undertake activities that significantly affect the intellectual property include the entity's customary business practices, published policies or specific statements. Although not determinative, the existence of a shared economic interest (for example, a sales-based royalty) between the entity and the customer related to the intellectual property to which the customer has rights may also indicate that the customer could reasonably expect that the entity will undertake such activities.

B60 If the criteria in paragraph B58 are met, an entity shall account for the promise to grant a licence as a performance obligation satisfied over time because the customer will simultaneously receive and consume the benefit from the entity’s performance of providing access to its intellectual property as the performance occurs (see paragraph 35(a)). An entity shall apply paragraphs 39–45 to select an appropriate method to measure its progress towards complete satisfaction of that performance obligation to provide access.

B61 If the criteria in paragraph B58 are not met, the nature of an entity’s promise is to provide a right to use the entity’s intellectual property as that intellectual property exists (in terms of form and functionality) at the point in time at which the licence is granted to the customer. This means that the customer can direct the use of, and obtain substantially all of the remaining benefits from, the licence at the point in time at which the licence transfers. An entity shall account for the promise to provide a right to use the entity’s intellectual property as a performance obligation satisfied at a point in time. [Refer: Illustrative
Examples, examples 54, 56 Case B and 59] An entity shall apply paragraph 38 to
determine the point in time at which the licence transfers to the customer.
However, revenue cannot be recognised for a licence that provides a right to use
the entity’s intellectual property before the beginning of the period during
which the customer is able to use and benefit from the licence. For example, if a
software licence period begins before an entity provides (or otherwise makes
available) to the customer a code that enables the customer to immediately use
the software, the entity would not recognise revenue before that code has been
provided (or otherwise made available).

An entity shall disregard the following factors when determining whether a
licence provides a right to access the entity’s intellectual property or a right to
use the entity’s intellectual property:

(a) Restrictions of time, geographical region or use—those restrictions define
the attributes of the promised licence, rather than define whether the
entity satisfies its performance obligation at a point in time or over time.

(b) Guarantees provided by the entity that it has a valid patent to
intellectual property and that it will defend that patent from
unauthorised use—a promise to defend a patent right is not a
performance obligation because the act of defending a patent protects
the value of the entity’s intellectual property assets and provides
assurance to the customer that the licence transferred meets the
specifications of the licence promised in the contract.

[Refer also: Basis for Conclusions paragraph BC411]

Sales-based or usage-based royalties
[Refer also: Basis for Conclusions paragraphs BC415 and BC421]

Notwithstanding the requirements in paragraphs 56–59, an entity shall
recognise revenue for a sales-based or usage-based royalty promised in exchange
for a licence of intellectual property only when (or as) the later of the following
events occurs:

(a) the subsequent sale or usage occurs; and

(b) the performance obligation to which some or all of the sales-based or
usage-based royalty has been allocated has been satisfied (or partially
satisfied).

[Refer also: Illustrative Examples, examples 4, 35, 57, 60 and 61]

Repurchase agreements
[Refer: paragraph 38
Basis for Conclusions paragraphs BC422 and BC423]

A repurchase agreement is a contract in which an entity sells an asset and also
promises or has the option (either in the same contract or in another contract)
to repurchase the asset. The repurchased asset may be the asset that was
originally sold to the customer, an asset that is substantially the same as that
asset, or another asset of which the asset that was originally sold is a component.

Repurchase agreements generally come in three forms:
(a) an entity’s obligation to repurchase the asset (a forward);  
(b) an entity’s right to repurchase the asset (a call option); and  
(c) an entity’s obligation to repurchase the asset at the customer’s request (a put option).

**A forward or a call option**  
[Refer: Basis for Conclusions paragraphs BC424–BC427]

If an entity has an obligation or a right to repurchase the asset (a forward or a call option), a customer does not obtain control of the asset because the customer is limited in its ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset even though the customer may have physical possession of the asset. Consequently, the entity shall account for the contract as either of the following:

(a) a lease in accordance with IAS 17 Leases if the entity can or must repurchase the asset for an amount that is less than the original selling price of the asset; or  
(b) a financing arrangement in accordance with paragraph B68 if the entity can or must repurchase the asset for an amount that is equal to or more than the original selling price of the asset. [Refer: Illustrative Examples, example 62 Case A]

When comparing the repurchase price with the selling price, an entity shall consider the time value of money.

If the repurchase agreement is a financing arrangement, the entity shall continue to recognise the asset and also recognise a financial liability for any consideration received from the customer. The entity shall recognise the difference between the amount of consideration received from the customer and the amount of consideration to be paid to the customer as interest and, if applicable, as processing or holding costs (for example, insurance). [Refer: Illustrative Examples, example 62 Case A]

If the option lapses unexercised, an entity shall derecognise the liability and recognise revenue.

**A put option**  
[Refer: Basis for Conclusions paragraphs BC428–BC431]

If an entity has an obligation to repurchase the asset at the customer’s request (a put option) at a price that is lower than the original selling price of the asset, the entity shall consider at contract inception whether the customer has a significant economic incentive to exercise that right. The customer’s exercising of that right results in the customer effectively paying the entity consideration for the right to use a specified asset for a period of time. Therefore, if the customer has a significant economic incentive to exercise that right, the entity shall account for the agreement as a lease in accordance with IAS 17. [Refer: Illustrative Examples, example 62 Case B]

To determine whether a customer has a significant economic incentive to exercise its right, an entity shall consider various factors, including the
relationship of the repurchase price to the expected market value of the asset at the date of the repurchase and the amount of time until the right expires. For example, if the repurchase price is expected to significantly exceed the market value of the asset, this may indicate that the customer has a significant economic incentive to exercise the put option.

[Refer: Illustrative Examples, example 62 Case B]

B72 If the customer does not have a significant economic incentive to exercise its right at a price that is lower than the original selling price of the asset, the entity shall account for the agreement as if it were the sale of a product with a right of return as described in paragraphs B20–B27.

B73 If the repurchase price of the asset is equal to or greater than the original selling price and is more than the expected market value of the asset, the contract is in effect a financing arrangement and, therefore, shall be accounted for as described in paragraph B68.

B74 If the repurchase price of the asset is equal to or greater than the original selling price and is less than or equal to the expected market value of the asset, and the customer does not have a significant economic incentive to exercise its right, then the entity shall account for the agreement as if it were the sale of a product with a right of return as described in paragraphs B20–B27.

B75 When comparing the repurchase price with the selling price, an entity shall consider the time value of money.

B76 If the option lapses unexercised, an entity shall derecognise the liability and recognise revenue.

**Consignment arrangements**

[Refer: paragraph 38]

B77 When an entity delivers a product to another party (such as a dealer or a distributor) for sale to end customers, the entity shall evaluate whether that other party has obtained control of the product at that point in time. A product that has been delivered to another party may be held in a consignment arrangement if that other party has not obtained control of the product. Accordingly, an entity shall not recognise revenue upon delivery of a product to another party if the delivered product is held on consignment.

B78 Indicators that an arrangement is a consignment arrangement include, but are not limited to, the following:

(a) the product is controlled by the entity until a specified event occurs, such as the sale of the product to a customer of the dealer or until a specified period expires;

(b) the entity is able to require the return of the product or transfer the product to a third party (such as another dealer); and

(c) the dealer does not have an unconditional obligation to pay for the product (although it might be required to pay a deposit).
Bill-and-hold arrangements

B79 A bill-and-hold arrangement is a contract under which an entity bills a customer for a product but the entity retains physical possession of the product until it is transferred to the customer at a point in time in the future. For example, a customer may request an entity to enter into such a contract because of the customer’s lack of available space for the product or because of delays in the customer’s production schedules.

B80 An entity shall determine when it has satisfied its performance obligation to transfer a product by evaluating when a customer obtains control of that product (see paragraph 38). For some contracts, control is transferred either when the product is delivered to the customer’s site or when the product is shipped, depending on the terms of the contract (including delivery and shipping terms). However, for some contracts, a customer may obtain control of a product even though that product remains in an entity’s physical possession. In that case, the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the product even though it has decided not to exercise its right to take physical possession of that product. Consequently, the entity does not control the product. Instead, the entity provides custodial services to the customer over the customer’s asset.

B81 In addition to applying the requirements in paragraph 38, for a customer to have obtained control of a product in a bill-and-hold arrangement, all of the following criteria must be met:

(a) the reason for the bill-and-hold arrangement must be substantive (for example, the customer has requested the arrangement);
(b) the product must be identified separately as belonging to the customer;
(c) the product currently must be ready for physical transfer to the customer; and
(d) the entity cannot have the ability to use the product or to direct it to another customer.

B82 If an entity recognises revenue for the sale of a product on a bill-and-hold basis, the entity shall consider whether it has remaining performance obligations (for example, for custodial services) in accordance with paragraphs 22–30 to which the entity shall allocate a portion of the transaction price in accordance with paragraphs 73–86.

Customer acceptance

B83 In accordance with paragraph 38(e), a customer’s acceptance of an asset may indicate that the customer has obtained control of the asset. Customer acceptance clauses allow a customer to cancel a contract or require an entity to take remedial action if a good or service does not meet agreed-upon specifications. An entity shall consider such clauses when evaluating when a customer obtains control of a good or service.

B84 If an entity can objectively determine that control of a good or service has been transferred to the customer in accordance with the agreed-upon specifications
in the contract, then customer acceptance is a formality that would not affect the entity’s determination of when the customer has obtained control of the good or service. For example, if the customer acceptance clause is based on meeting specified size and weight characteristics, an entity would be able to determine whether those criteria have been met before receiving confirmation of the customer’s acceptance. The entity’s experience with contracts for similar goods or services may provide evidence that a good or service provided to the customer is in accordance with the agreed-upon specifications in the contract. If revenue is recognised before customer acceptance, the entity still must consider whether there are any remaining performance obligations (for example, installation of equipment) and evaluate whether to account for them separately.

However, if an entity cannot objectively determine that the good or service provided to the customer is in accordance with the agreed-upon specifications in the contract, then the entity would not be able to conclude that the customer has obtained control until the entity receives the customer’s acceptance. That is because in that circumstance the entity cannot determine that the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the good or service.

If an entity delivers products to a customer for trial or evaluation purposes and the customer is not committed to pay any consideration until the trial period lapses, control of the product is not transferred to the customer until either the customer accepts the product or the trial period lapses.

**Disclosure of disaggregated revenue**

[Refer: Basis for Conclusions paragraphs BC335–BC340; Illustrative Examples, example 41]

Paragraph 114 requires an entity to disaggregate revenue from contracts with customers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. Consequently, the extent to which an entity’s revenue is disaggregated for the purposes of this disclosure depends on the facts and circumstances that pertain to the entity’s contracts with customers. Some entities may need to use more than one type of category to meet the objective in paragraph 114 for disaggregating revenue. Other entities may meet the objective by using only one type of category to disaggregate revenue.

When selecting the type of category (or categories) to use to disaggregate revenue, an entity shall consider how information about the entity’s revenue has been presented for other purposes, including all of the following:

(a) disclosures presented outside the financial statements (for example, in earnings releases, annual reports or investor presentations);

(b) information regularly reviewed by the chief operating decision maker [Refer: IFRS 8 paragraph 7] for evaluating the financial performance of operating segments; and
IFRS 15

(c) other information that is similar to the types of information identified in paragraph B88(a) and (b) and that is used by the entity or users of the entity’s financial statements to evaluate the entity’s financial performance or make resource allocation decisions.

B89 Examples of categories that might be appropriate include, but are not limited to, all of the following:

(a) type of good or service (for example, major product lines);
(b) geographical region (for example, country or region);
(c) market or type of customer (for example, government and non-government customers);
(d) type of contract (for example, fixed-price and time-and-materials contracts);
(e) contract duration (for example, short-term and long-term contracts);
(f) timing of transfer of goods or services (for example, revenue from goods or services transferred to customers at a point in time and revenue from goods or services transferred over time); and
(g) sales channels (for example, goods sold directly to consumers and goods sold through intermediaries).
Appendix C
Effective date and transition

This appendix is an integral part of the Standard and has the same authority as the other parts of the Standard.

Effective date

C1 An entity shall apply this Standard for annual reporting periods beginning on or after 1 January 2017. [Refer: Basis for Conclusions paragraphs BC446–BC451] Earlier application is permitted. [Refer: Basis for Conclusions paragraphs BC452 and BC453] If an entity applies this Standard earlier, it shall disclose that fact.

Transition

C2 For the purposes of the transition requirements in paragraphs C3–C8:
  (a) the date of initial application is the start of the reporting period in which an entity first applies this Standard; and
  (b) a completed contract is a contract for which the entity has transferred all of the goods or services identified in accordance with IAS 11 Construction Contracts, IAS 18 Revenue and related Interpretations.

C3 An entity shall apply this Standard using one of the following two methods:
  (a) retrospectively to each prior reporting period presented in accordance with IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors, subject to the expedients in paragraph C5; [Refer: Basis for Conclusions paragraphs BC435 and BC436] or
  (b) retrospectively with the cumulative effect of initially applying this Standard recognised at the date of initial application in accordance with paragraphs C7–C8.
[Refer also: Basis for Conclusions paragraph BC434–BC436]

C4 Notwithstanding the requirements of paragraph 28 of IAS 8, when this Standard is first applied, an entity need only present the quantitative information required by paragraph 28(f) of IAS 8 [Refer: Basis for Conclusions paragraph BC445] for the annual period immediately preceding the first annual period for which this Standard is applied (the ‘immediately preceding period’) and only if the entity applies this Standard retrospectively in accordance with paragraph C3(a). An entity may also present this information for the current period or for earlier comparative periods, but is not required to do so.

C5 An entity may use one or more of the following practical expedients when applying this Standard retrospectively in accordance with paragraph C3(a):
  (a) for completed contracts, an entity need not restate contracts that begin and end within the same annual reporting period;
(b) for completed contracts that have variable consideration, an entity may use the transaction price at the date the contract was completed rather than estimating variable consideration amounts in the comparative reporting periods; and

(c) for all reporting periods presented before the date of initial application, an entity need not disclose the amount of the transaction price allocated to the remaining performance obligations and an explanation of when the entity expects to recognise that amount as revenue (see paragraph 120).

[Refer: Basis for Conclusions paragraph BC437]

C6 For any of the practical expedients in paragraph C5 that an entity uses, the entity shall apply that expedient consistently to all contracts within all reporting periods presented. In addition, the entity shall disclose all of the following information:

(a) the expedients that have been used; and

(b) to the extent reasonably possible, a qualitative assessment of the estimated effect of applying each of those expedients.

[Refer: Basis for Conclusions paragraph BC438]

C7 If an entity elects to apply this Standard retrospectively in accordance with paragraph C3(b), the entity shall recognise the cumulative effect of initially applying this Standard as an adjustment to the opening balance of retained earnings (or other component of equity, as appropriate) of the annual reporting period that includes the date of initial application. Under this transition method, an entity shall apply this Standard retrospectively only to contracts that are not completed contracts at the date of initial application (for example, 1 January 2017 for an entity with a 31 December year-end).

C8 For reporting periods that include the date of initial application, an entity shall provide both of the following additional disclosures if this Standard is applied retrospectively in accordance with paragraph C3(b):

(a) the amount by which each financial statement line item is affected in the current reporting period by the application of this Standard as compared to IAS 11, IAS 18 and related Interpretations that were in effect before the change; and

(b) an explanation of the reasons for significant changes identified in C8(a).

[Refer: Basis for Conclusions paragraphs BC441–BC443]

References to IFRS 9

C9 If an entity applies this Standard but does not yet apply IFRS 9 Financial Instruments, any reference in this Standard to IFRS 9 shall be read as a reference to IAS 39 Financial Instruments: Recognition and Measurement.

Withdrawal of other Standards

C10 This Standard supersedes the following Standards:

(a) IAS 11 Construction Contracts;
(b) IAS 18 Revenue;
(c) IFRIC 13 Customer Loyalty Programmes;
(d) IFRIC 15 Agreements for the Construction of Real Estate;
(e) IFRIC 18 Transfers of Assets from Customers; and
(f) SIC-31 Revenue—Barter Transactions Involving Advertising Services.
Appendix D  
Amendments to other Standards  

This Appendix describes the amendments to other Standards that the IASB made when it finalised IFRS 15. An entity shall apply the amendments for annual periods beginning on or after 1 January 2017. If an entity applies IFRS 15 for an earlier period, these amendments shall be applied for that earlier period.

* * * * *

The amendments contained in this appendix when this Standard was issued in 2014 have been incorporated into the text of the relevant Standards included in this volume.

TRANSITION FOR FIRST-TIME ADOPTERS OF IFRS

SUMMARY OF MAIN CHANGES FROM THE 2011 EXPOSURE DRAFT

APPENDICES
A Comparison of IFRS 15 and Topic 606
B Amendments to the Basis for Conclusions on other Standards
Introduction

This Basis for Conclusions summarises the joint considerations of the International Accounting Standards Board (IASB) and the US national standard-setter, the Financial Accounting Standards Board (FASB), in reaching the conclusions in their standards, IFRS 15 Revenue from Contracts with Customers and Topic 606, which is introduced into the FASB Accounting Standards Codification by the Accounting Standards Update 2014-09 Revenue from Contracts with Customers. It includes the reasons for accepting particular views and rejecting others. Individual Board members gave greater weight to some factors than to others.

Overview

IFRS 15 and Topic 606 are the result of the IASB’s and the FASB’s joint project to improve the financial reporting of revenue under International Financial Reporting Standards (IFRS) and US Generally Accepted Accounting Principles (US GAAP). The boards undertook this project because their requirements for revenue needed improvement for the following reasons:

(a) US GAAP comprised broad revenue recognition concepts and detailed guidance for particular industries or transactions, which often resulted in different accounting for economically similar transactions.

(b) the previous revenue Standards in IFRS had different principles and were sometimes difficult to understand and apply to transactions other than simple ones. In addition, IFRS had limited guidance on important topics such as revenue recognition for multiple-element arrangements. Consequently, some entities that were applying IFRS referred to parts of US GAAP to develop an appropriate revenue recognition accounting policy.

(c) the disclosures required under both IFRS and US GAAP were inadequate and often did not provide users of financial statements with information to sufficiently understand revenue arising from contracts with customers.

IFRS 15 and Topic 606 eliminate those inconsistencies and weaknesses by providing a comprehensive revenue recognition model that applies to a wide range of transactions and industries. The comprehensive model also improves previous IFRS and US GAAP by:

(a) providing a more robust framework for addressing revenue recognition issues;

2 Unless indicated otherwise, all references to IFRS 15 in this Basis for Conclusions can be read as also referring to Topic 606.
(b) improving comparability of revenue recognition practices across entities, industries, jurisdictions and capital markets;
(c) simplifying the preparation of financial statements by reducing the amount of guidance to which entities must refer; and
(d) requiring enhanced disclosures to help users of financial statements better understand the nature, amount, timing and uncertainty of revenue that is recognised.

**Background**

BC4 In December 2008, the boards published for public comment the Discussion Paper Preliminary Views on Revenue Recognition in Contracts with Customers and received more than 200 comment letters in response. In the Discussion Paper, the boards proposed the general principles of a contract-based revenue recognition model with a measurement approach that was based on an allocation of the transaction price. That revenue recognition model was developed after extensive discussions by the boards on alternative models for recognising and measuring revenue (see paragraphs BC16–BC27).

BC5 Respondents to the Discussion Paper generally supported the objective of developing a comprehensive revenue recognition model for both IFRS and US GAAP. Most respondents also generally supported the recognition and measurement principles proposed in the Discussion Paper, which are the basic building blocks of the revenue recognition model. In particular, the Discussion Paper introduced the concepts that a contract contains performance obligations for the entity to transfer goods or services to a customer and that revenue is recognised when the entity satisfies its performance obligations as a result of the customer obtaining control of those goods or services.

BC6 Respondents to the Discussion Paper were mainly concerned about the following proposals:
(a) identifying performance obligations only on the basis of the timing of the transfer of the good or service to the customer. Respondents commented that this would be impractical, especially when many goods or services are transferred over time to the customer (for example, in construction contracts).
(b) using the concept of control to determine when a good or service is transferred. Respondents asked the boards to clarify the application of the concept of control to avoid the implication that the proposals would require completed contract accounting for all construction contracts (ie revenue is recognised only when the customer obtains legal title or physical possession of the completed asset).

BC7 The boards considered those comments when developing the Exposure Draft Revenue from Contracts with Customers (the FASB’s Exposure Draft was a proposed Accounting Standards Update), which was published in June 2010 (the ‘2010 Exposure Draft’). Nearly 1,000 comment letters were received from respondents representing a wide range of industries, including construction, manufacturing, telecommunications, technology, pharmaceutical, biotechnology, financial
services, consulting, media and entertainment, energy and utilities, freight and logistics, and industries with significant franchising operations, such as hospitality and quick-service restaurant chains. The boards and their staffs also consulted extensively on the proposals in the 2010 Exposure Draft by participating in round-table discussions, conferences, working group sessions, discussion forums and one-to-one discussions that were held across all major geographical regions.

BC8 The boards also received a substantial number of comment letters in response to a question asked by the FASB on whether the proposals should apply to non-public entities. Almost all of those comment letters were from respondents associated with sections of the US construction industry (for example, private construction contractors, accounting firms that serve those contractors and surety providers who use the financial statements of construction contractors when deciding whether to guarantee that those contractors will meet their obligations under a contract). Those respondents also raised concerns about the application of the proposed model to non-public entities. Those issues were considered and discussed separately by the FASB.

BC9 With the exception of many of the responses from non-public entities in the construction industry, most of the feedback from the comment letters and from the consultation activities generally supported the boards’ proposal for a comprehensive revenue recognition model for both IFRS and US GAAP. Moreover, most respondents supported the core principle of that model, which was that an entity should recognise revenue to depict the transfer of goods or services to a customer in an amount that reflects the amount of consideration that the entity expects to receive for those goods or services.

BC10 Almost all respondents to the 2010 Exposure Draft indicated that the boards should clarify further the operation of the core principle. In particular, respondents were concerned about the application of the following:

(a) the concept of control and, in particular, the application of the indicators of the transfer of control to service contracts and to contracts for the transfer of an asset over time to a customer as it is being constructed (for example, a work-in-progress asset).

(b) the principle of distinct goods or services for identifying performance obligations in a contract. Many respondents were concerned that the proposed principle would lead to inappropriate disaggregation of the contract.

BC11 The boards addressed those concerns during the redeliberations of the proposals in the 2010 Exposure Draft. As the redeliberations of those proposals drew to a close, the boards decided to issue a revised Exposure Draft for public comment to provide interested parties with an opportunity to comment on the revisions that the boards had made since the 2010 Exposure Draft was published. The boards decided unanimously that it was appropriate to go beyond their established due process and re-expose their revised revenue proposals, because of the importance of revenue to all entities and to avoid unintended consequences in the recognition of revenue for specific contracts or industries. The revised Exposure Draft Revenue from Contracts with Customers was published in
November 2011 (the '2011 Exposure Draft') and approximately 350 comment letters were received from respondents representing a wide range of industries. As in the case of the 2010 Exposure Draft, the boards and their staffs consulted extensively on the proposals in the 2011 Exposure Draft. This consultation also included all major geographical regions and occurred in a number of formats. Many of the discussions focused on detailed analyses related to the application of the revenue recognition model and the principles in the 2011 Exposure Draft.

Almost all respondents continued to support the core principle of the revenue recognition model, which is that an entity should recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. Moreover, most of the feedback from the comment letters and from the consultation activities generally supported the revisions to the boards’ proposed revenue recognition model in the 2011 Exposure Draft. However, respondents raised issues or questions on some of the proposals in the 2011 Exposure Draft. That feedback could be broadly divided into three categories:

(a) requests for clarifications and further refinements—such as on the criteria for identifying performance obligations, determining when a performance obligation is satisfied over time and constraining estimates of variable consideration;

(b) difficulties in the practical application of the requirements—such as on the time value of money (referred to as a significant financing component in IFRS 15) and the retrospective application of the proposed Standard; and

(c) disagreement with some of the proposed requirements for the following topics:

(i) identifying onerous performance obligations;

(ii) disclosing information about revenue;

(iii) applying the requirements for licences; and

(iv) applying the allocation principles to contracts that are prevalent in the telecommunications industry.

The boards addressed those concerns during the redeliberations of the proposals in the 2011 Exposure Draft. The boards’ discussion of those concerns and their conclusions are included in the relevant sections of this Basis for Conclusions.

Why make the change?

Throughout the project, some respondents questioned the need to replace the requirements for revenue recognition, particularly because those requirements seemed to work reasonably well in practice and provided useful information about the different types of contracts for which they were intended.

(a) For US GAAP, some questioned whether a new revenue recognition model was necessary, because Accounting Standards Update No. 2009-13 Revenue Recognition (Topic 605): Multiple-Deliverable Revenue Arrangements
resolved some of the issues that the Revenue Recognition project had originally intended to resolve. Furthermore, the FASB Accounting Standards Codification® (the Codification) had simplified the process of accessing and researching previous requirements for revenue.

(b) For IFRS, some indicated that the IASB could have improved, rather than replace, its previous revenue Standards by developing additional requirements for critical issues (for example, multiple-element arrangements).

BC15 The boards acknowledged that it would have been possible to improve many of the previous revenue recognition requirements without replacing them. However, even after the changes to US GAAP mentioned in paragraph BC14(a), the requirements in US GAAP would have continued to result in inconsistent accounting for revenue and, consequently, would not have provided a robust framework for addressing revenue recognition issues in the future. Furthermore, amending the requirements would have failed to achieve one of the goals of the Revenue Recognition project, which was to develop a common revenue standard for IFRS and US GAAP that entities could apply consistently across industries, jurisdictions and capital markets. Because revenue is a crucial number to users of financial statements, the boards decided that a common standard on revenue for IFRS and US GAAP is an important step toward achieving the goal of a single set of high-quality global accounting standards. To be consistent with that goal, the boards noted that previous revenue recognition requirements in IFRS and US GAAP should not be used to supplement the principles in IFRS 15.

Alternative revenue recognition models

[Refer: paragraph 2]

BC16 During the early stages of their Revenue Recognition project, the boards considered various alternative revenue recognition models, including the following:

(a) the basis for recognising revenue—specifically, whether an entity should recognise revenue only when it transfers a promised good or service to a customer (a contract-based revenue recognition principle) or when (or as) the entity undertakes a productive activity (which could be an activity that is undertaken regardless of whether a contract exists); and

(b) the basis for measuring revenue—specifically, whether revenue should be measured at an allocated customer consideration amount (ie the transaction price) or at a current exit price.

Basis for recognising revenue

BC17 In the Discussion Paper, the boards proposed a principle to recognise revenue on the basis of the accounting for the asset or the liability arising from a contract with a customer. The boards had two reasons for developing a standard on revenue that applies only to contracts with customers. First, contracts to provide goods or services to customers are important economic phenomena and are crucial to most entities. Second, most previous revenue recognition requirements in IFRS and US GAAP focused on contracts with customers. The
boards decided that focusing on the recognition and measurement of the asset or liability arising from a contract with a customer and the changes in that asset or liability over the life of the contract would bring discipline to the earnings process approach. Consequently, it would result in entities recognising revenue more consistently than they did under previous revenue recognition requirements.

BC18 Upon entering into a contract with a customer, an entity obtains rights to receive consideration from the customer and assumes obligations to transfer goods or services to the customer (performance obligations). The combination of those rights and performance obligations gives rise to a (net) asset or a (net) liability depending on the relationship between the remaining rights and the performance obligations. The contract is an asset (a contract asset) if the measure of the remaining rights exceeds the measure of the remaining performance obligations. Conversely, the contract is a liability (a contract liability) if the measure of the remaining performance obligations exceeds the measure of the remaining rights.

BC19 By definition, revenue from a contract with a customer cannot be recognised until a contract exists. Conceptually, revenue recognition could occur at the point at which an entity enters into a contract with a customer. For an entity to recognise revenue at contract inception (before either party has performed), the measure of the entity’s rights must exceed the measure of the entity’s performance obligations. This could occur if the rights and obligations were measured at current exit prices and would lead to revenue recognition because of an increase in a contract asset. However, as described in paragraph BC25, the boards proposed in the Discussion Paper that performance obligations should be measured at the same amount as the rights in the contract at contract inception, thereby precluding the recognition of a contract asset and revenue at contract inception.

BC20 Therefore, the boards decided that revenue should be recognised only when an entity transfers a promised good or service to a customer, thereby satisfying a performance obligation in the contract. That transfer results in revenue recognition, because upon satisfying a performance obligation an entity no longer has that obligation to provide the good or service. Consequently, its position in the contract increases—either its contract asset increases or its contract liability decreases—and that increase leads to revenue recognition.

BC21 Although, conceptually, revenue arises from an increase in a contract asset or a decrease in a contract liability, the boards articulated the requirements in terms of the recognition and measurement of revenue rather than the recognition and measurement of the contract. The boards noted that focusing on the timing and amount of revenue from a contract with a customer would simplify the requirements. Feedback from respondents to the Discussion Paper and the 2010 and 2011 Exposure Drafts confirmed that view.

BC22 Nearly all respondents to the Discussion Paper agreed with the boards’ view that an entity generally should not recognise revenue if there is no contract with a customer. However, some respondents requested that the boards instead develop an activities model in which revenue would be recognised as the entity undertakes activities in producing or providing goods or services, regardless of
whether those activities result in the transfer of goods or services to the customer. Those respondents reasoned that recognising revenue over time, for example, throughout long-term construction or other service contracts, regardless of whether goods or services are transferred to the customer, would provide users of financial statements with more useful information.

BC23 However, the boards noted the following concerns about an activities model:

(a) revenue recognition would not have been based on accounting for the contract. In an activities model, revenue arises from increases in the entity’s assets, such as inventory or work-in-progress, rather than only from rights under a contract. Consequently, conceptually, an activities model does not require a contract with a customer for revenue recognition, although revenue recognition could be precluded until a contract exists. However, that would have resulted in revenue being recognised at contract inception for any activities completed to that point.

(b) it would have been counterintuitive to many users of financial statements. An entity would have recognised consideration as revenue when the customer had not received any promised goods or services in exchange.

(c) there would have been potential for abuse. An entity could have accelerated revenue recognition by increasing its activities (for example, production of inventory) at the end of a reporting period.

(d) it would have resulted in a significant change to previous revenue recognition requirements and practices. In many of those requirements, revenue was recognised only when goods or services were transferred to the customer. For example, previous requirements in IFRS required revenue from the sale of a good to be recognised when the entity transferred ownership of the good to the customer. The boards also observed that the basis for percentage-of-completion accounting in previous revenue recognition requirements could be viewed as similar to the core principle in IFRS 15.

BC24 Accordingly, the boards did not develop an activities model and they maintained their view that a contract-based revenue recognition principle is the most appropriate principle for a general revenue recognition standard for contracts with customers.

Basis for measuring revenue

BC25 The boards decided that an allocated transaction price approach should be applied to measure performance obligations. Using that approach, an entity would allocate the transaction price to each performance obligation in the contract (see paragraphs BC181 and BC266). In the Discussion Paper, the boards considered an alternative approach to measure performance obligations directly at current exit prices. However, the boards rejected that approach for the following reasons:
an entity would have recognised revenue before transferring goods or services to the customer at contract inception if the measure of rights to consideration exceeded the measure of the remaining performance obligations. That would have been a typical occurrence at contract inception, because the transaction price often includes amounts that enable an entity to recover its costs to obtain a contract.

Any errors in identifying or measuring performance obligations could have affected revenue recognised at contract inception.

c) A current exit price (ie the price that would be received to sell an asset or paid to transfer a liability) for the remaining performance obligations is typically not observable and an estimated current exit price could be complex and costly to prepare and difficult to verify.

Almost all respondents supported the boards’ proposal to measure performance obligations using an allocated transaction price approach.

In the Discussion Paper, the boards also considered whether it would be appropriate to require an alternative measurement approach for some types of performance obligations (for example, performance obligations with highly variable outcomes, for which an allocated transaction price approach may not result in useful information). However, the boards decided that the benefits of accounting for all performance obligations within the scope of the requirements using the same measurement approach outweighed any concerns about using that approach for some types of performance obligations. The boards also noted that a common type of contract with customers that has highly variable outcomes would be an insurance contract, which is excluded from the scope of IFRS 15.

Scope

The boards decided that IFRS 15 should apply only to a subset of revenue as defined in each of the boards’ conceptual frameworks (ie revenue from contracts with customers). Revenue from transactions or events that does not arise from a contract with a customer is not within the scope of IFRS 15 and, therefore, those transactions or events will continue to be recognised in accordance with other Standards, for example:

(a) Dividends received (although these requirements existed in previous revenue Standards in IFRS, the IASB has moved them unchanged, and without changing their effect, into IFRS 9 Financial Instruments);

(b) Non-exchange transactions (for example, donations or contributions received);

(c) For IFRS, changes in the value of biological assets, investment properties and the inventory of commodity broker-traders; and

(d) For US GAAP, changes in regulatory assets and liabilities arising from alternative revenue programmes for rate-regulated entities in the scope of Topic 980 on regulated operations. (The FASB decided that the revenue arising from those assets or liabilities should be presented...
separately from revenue arising from contracts with customers. Therefore, the FASB made amendments to Subtopic 980-605 Regulated Operations—Revenue Recognition.)

BC29 The boards decided not to amend the existing definitions of revenue in each of their conceptual frameworks. The boards decided that they will consider the definition of revenue when they revise their respective conceptual frameworks. However, the IASB decided to carry forward into IFRS 15 the description of revenue from the IASB’s Conceptual Framework for Financial Reporting rather than the definition of revenue from a previous revenue Standard. The IASB noted that the definition in a previous revenue Standard referred to ‘gross inflow of economic benefits’ and it had concerns that some might have misread that reference as implying that an entity should recognise as revenue a prepayment from a customer for goods or services. As described in paragraphs BC17–BC24, the principle is that revenue is recognised in accordance with IFRS 15 as a result of an entity satisfying a performance obligation in a contract with a customer. In addition, the FASB decided to carry forward a definition of revenue that is based on the definition in FASB Concepts Statement No. 6 Elements of Financial Statements.

BC30 The converged definitions of a contract and a customer establish the scope of IFRS 15.

Definition of a contract (Appendix A)

BC31 The boards’ definition of contract is based on common legal definitions of a contract in the United States and is similar to the definition of a contract used in IAS 32 Financial Instruments: Presentation. The IASB decided not to adopt a single definition of a contract for both IAS 32 and IFRS 15, because the IAS 32 definition implies that contracts can include agreements that are not enforceable by law. Including such agreements would have been inconsistent with the boards’ decision that a contract with a customer must be enforceable by law for an entity to recognise the rights and obligations arising from that contract. The IASB also noted that amending the IAS 32 definition would have posed the risk of unintended consequences in accounting for financial instruments.

BC32 The definition of a contract emphasises that a contract exists when an agreement between two or more parties creates enforceable rights and obligations between those parties. The boards noted that the agreement does not need to be in writing to be a contract. Whether the agreed-upon terms are written, oral or evidenced otherwise (for example, by electronic assent), a contract exists if the agreement creates rights and obligations that are enforceable against the parties. Determining whether a contractual right or obligation is enforceable is a question to be considered within the context of the relevant legal framework (or equivalent framework) that exists to ensure that the parties’ rights and obligations are upheld. The boards observed that the factors that determine enforceability may differ between jurisdictions. Although there must be enforceable rights and obligations between parties for a contract to exist, the boards decided that the performance obligations within the contract could include promises that result in the customer having a valid
The boards decided to complement the definition of a contract by specifying criteria that must be met before an entity can apply the revenue recognition model to that contract (see paragraph 9 of IFRS 15). Those criteria are derived mainly from previous revenue recognition requirements and other existing standards. The boards decided that when some or all of those criteria are not met, it is questionable whether the contract establishes enforceable rights and obligations. The boards’ rationale for including those criteria is discussed in paragraphs BC35–BC46.

The boards also decided that those criteria would be assessed at contract inception and would not be reassessed unless there is an indication that there has been a significant change in facts and circumstances (see paragraph 13 of IFRS 15). The boards decided that it was important to reassess the criteria in those cases, because that change might clearly indicate that the remaining contractual rights and obligations are no longer enforceable. The word ‘remaining’ in paragraph 13 of IFRS 15 indicates that the criteria would be applied only to those rights and obligations that have not yet transferred. That is, an entity would not include in the reassessment (and therefore would not reverse) any receivables, revenue or contract assets already recognised.

The parties have approved the contract and are committed to performing their respective obligations (paragraph 9(a))

The boards decided to include this criterion because if the parties to a contract have not approved the contract, it is questionable whether that contract is enforceable. Some respondents questioned whether oral and implied contracts could meet this criterion, especially if it is difficult to verify an entity’s approval of that contract. The boards noted that the form of the contract does not, in and of itself, determine whether the parties have approved the contract. Instead, an entity should consider all relevant facts and circumstances in assessing whether the parties intend to be bound by the terms and conditions of the contract. Consequently, in some cases, the parties to an oral or an implied contract (in accordance with customary business practices) may have agreed to fulfill their respective obligations. In other cases, a written contract may be required to determine that the parties to the contract have approved it.

In addition, the boards decided that the parties should be committed to performing their respective obligations under the contract. However, the boards decided that an entity and a customer would not always need to be committed to fulfilling all of their respective rights and obligations for a contract to meet the requirements in paragraph 9(a) of IFRS 15. For example, a contract might include a requirement for the customer to purchase a minimum quantity of goods from the entity each month, but the customer’s past practice indicates that the customer is not committed to always purchasing the minimum quantity each month and the entity does not enforce the requirement to purchase the minimum quantity. In that example, the criterion in paragraph 9(a) of IFRS 15 could still be satisfied if there is evidence that demonstrates that the customer and the entity are substantially committed to the contract. The boards noted that requiring all of the rights and obligations to
be fulfilled would have inappropriately resulted in no recognition of revenue for some contracts in which the parties are substantially committed to the contract.

The entity can identify each party’s rights regarding the goods or services to be transferred (paragraph 9(b))

BC37 The boards decided to include this criterion because an entity would not be able to assess the transfer of goods or services if it could not identify each party’s rights regarding those goods or services.

The entity can identify the payment terms for the goods or services to be transferred (paragraph 9(c))

BC38 The boards decided to include this criterion because an entity would not be able to determine the transaction price if it could not identify the payment terms in exchange for the promised goods or services.

BC39 Respondents from the construction industry questioned whether an entity can identify the payment terms for orders for which the scope of work may already have been defined even though the specific amount of consideration for that work has not yet been determined and may not be finally determined for a period of time (sometimes referred to as unpriced change orders or claims). The boards clarified that their intention is not to preclude revenue recognition for unpriced change orders if the scope of the work has been approved and the entity expects that the price will be approved. The boards noted that, in those cases, the entity would consider the requirements for contract modifications (see paragraphs BC76–BC83).

The contract has commercial substance (paragraph 9(d))

BC40 The boards decided to include ‘commercial substance’ as a criterion when they discussed whether revenue should be recognised in contracts with customers that include non-monetary exchanges. Without that requirement, entities might transfer goods or services back and forth to each other (often for little or no cash consideration) to artificially inflate their revenue. Consequently, the boards decided that an entity should not recognise revenue from a non-monetary exchange if the exchange has no commercial substance.

BC41 The boards decided to describe commercial substance in paragraph 9(d) of IFRS 15 in a manner that is consistent with its existing meaning in other financial reporting contexts, such as existing requirements for non-monetary exchange transactions. The boards also observed that this criterion is important in all contracts (not only non-monetary exchanges) because without commercial substance it is questionable whether an entity has entered into a transaction that has economic consequences. Consequently, the boards decided that all contracts should have commercial substance before an entity can apply the other requirements in the revenue recognition model.

It is probable that the entity will collect the consideration to which it will be entitled (paragraph 9(e))

BC42 The boards included the criterion in paragraph 9(e) of IFRS 15 (which acts like a collectability threshold) because they concluded that the assessment of a customer’s credit risk was an important part of determining whether a contract
is valid. Furthermore, the boards decided to include this criterion as a consequence of their decision that customer credit risk should not affect the measurement or presentation of revenue (see paragraphs BC259–BC265).

**BC43** The boards decided that a collectability threshold is an extension of the other requirements in paragraph 9 of IFRS 15 on identifying the contract. In essence, the other criteria in paragraph 9 require an entity to assess whether the contract is valid and represents a genuine transaction. The collectability threshold is related to that assessment because a key part of assessing whether a transaction is valid is determining the extent to which the customer has the ability and the intention to pay the promised consideration. In addition, entities generally only enter into contracts in which it is probable that the entity will collect the amount to which it will be entitled.

**BC44** The boards noted that the term ‘probable’ has different meanings under US GAAP and IFRS. Under US GAAP, the term was initially defined in Topic 450 Contingencies as ‘likely to occur’ whereas under IFRS, probable is defined as ‘more likely than not’. The boards noted that using the same term which has different meanings in US GAAP and IFRS could result in accounting that is not converged when determining whether the criterion in paragraph 9(e) of IFRS 15 is met. However, the boards noted that the term ‘probable’ was used in some of the collectability thresholds in their previous revenue recognition requirements and both boards wanted to maintain consistency with those requirements. (The term ‘reasonably assured’ was also used in collectability thresholds in some parts of US GAAP. However, in this context, the FASB understood that in practice, probable and reasonably assured had similar meanings.) In addition, the boards observed that in most transactions, an entity would not enter into a contract with a customer in which there was significant credit risk associated with that customer without also having adequate economic protection to ensure that it would collect the consideration. Consequently, the boards decided that there would not be a significant practical effect of the different meaning of the same term because the population of transactions that would fail to meet the criterion in paragraph 9(e) of IFRS 15 would be small.

**BC45** In determining whether it is probable that an entity will collect the amount of consideration to which the entity will be entitled, an entity might first need to determine the amount of consideration to which the entity will be entitled. This is because, in some circumstances, the amount of consideration to which an entity will be entitled may be less than the price stated in the contract. This could be because the entity might offer the customer a price concession (see paragraph 52 of IFRS 15) or because the amount of consideration to which an entity will be entitled varies for other reasons, such as the promise of a bonus. In either of those circumstances, an entity considers whether it is probable that the entity will collect the amount of consideration to which it will be entitled when the uncertainty relating to that consideration is resolved. The entity assesses whether it is probable of collecting that amount by considering both of the following:

(a) the ability (ie the financial capacity) of the customer to pay the amount of consideration to which the entity will be entitled in exchange for the goods or services transferred.
the customer’s intention to pay that amount. The boards observed that an assessment of the customer’s intention would require an entity to consider all of the facts and circumstances, including the past practice of that customer or customer class. The boards noted that this assessment should be made on the assumption that the amount will be due (i.e., the corresponding performance obligation will be satisfied and the consideration is not subject to further variability that might affect the entity’s entitlement to that consideration).

In addition, the boards specified in paragraph 9(e) of IFRS 15 that an entity should assess only the consideration to which it will be entitled in exchange for the goods or services that will be transferred to a customer. Therefore, if the customer were to fail to perform as promised and consequently the entity would respond to the customer’s actions by not transferring any further goods or services to the customer, the entity would not consider the likelihood of payment for those goods or services that would not be transferred.

Accounting for contracts that do not meet the criteria in paragraph 9

The boards decided to include the requirements in paragraphs 14–16 of IFRS 15 in response to questions from some respondents about how an entity should account for its rights and obligations when a contract does not meet the criteria in paragraph 9 of IFRS 15. Those respondents were concerned that if a contract did not meet the criteria in paragraph 9 of IFRS 15, in the absence of specific requirements, an entity would seek alternative guidance and potentially apply the revenue recognition model by analogy, which might not result in appropriate accounting. Consequently, the boards specified that in cases in which the contract does not meet the criteria in paragraph 9 of IFRS 15, an entity should recognise the consideration received as revenue only when one of the events in paragraph 15 of IFRS 15 has occurred or the entity reassesses the criteria in paragraph 9 of IFRS 15 and the contract subsequently meets those criteria.

The requirements in paragraph 15 are consistent with the boards’ rationale for paragraph 9 of IFRS 15, which is to filter out contracts that may not be valid and that do not represent genuine transactions, and therefore recognising revenue for those contracts would not provide a faithful representation of such transactions. The requirements therefore preclude an entity from recognising any revenue until the contract is either complete or cancelled or until a subsequent reassessment indicates that the contract meets all of the criteria in paragraph 9 of IFRS 15. The boards noted that this approach is similar to the ‘deposit method’ that was previously included in US GAAP and that was applied when there was no consummation of a sale.

The boards considered whether to include asset derecognition requirements (and therefore cost recognition requirements) for assets related to a contract that does not meet the criteria in paragraph 9 of IFRS 15. However, the boards decided not to include requirements for asset derecognition for these types of transactions, because including those requirements would be outside the scope of this project. (However, the FASB added some asset derecognition guidance to other Standards for transactions outside the scope of the requirements—that is,
for the transfer of non-financial assets. See paragraphs BC494–BC503.) The boards noted that entities should apply existing IFRS and US GAAP to assets related to contracts that do not meet the criteria in paragraph 9 of IFRS 15.

**Wholly unperformed contracts**
[Refer: paragraph 12]

BC50 The boards decided that IFRS 15 should not apply to wholly unperformed contracts if each party to the contract has the unilateral enforceable right to terminate the contract without penalty. Those contracts would not affect an entity’s financial position or performance until either party performs. In contrast, there could be an effect on an entity’s financial position and performance if only one party could terminate a wholly unperformed contract without penalty. For instance, if only the customer could terminate the wholly unperformed contract without penalty, the entity is obliged to stand ready to perform at the discretion of the customer. Similarly, if only the entity could terminate the wholly unperformed contract without penalty, it has an enforceable right to payment from the customer if it chooses to perform.

BC51 In accordance with IFRS 15, an entity’s rights and obligations in wholly unperformed non-cancellable contracts are measured at the same amount and, therefore, would offset each other at inception. However, by including those contracts within the scope of IFRS 15, an entity would provide additional information about a change in its financial position that resulted from entering into those contracts, that is, disclosing the amount of transaction price allocated to the remaining performance obligations in that wholly unperformed contract (see paragraph 120 of IFRS 15).

**Definition of a customer (paragraph 6 and Appendix A)**

BC52 The boards decided to define the term ‘customer’ to enable an entity to distinguish contracts that should be accounted for under IFRS 15 (ie contracts with customers) from contracts that should be accounted for under other requirements.

BC53 The definition of a customer in IFRS 15 refers to an entity’s ordinary activities. Some respondents asked the boards to clarify the meaning of ordinary activities; however, the boards decided not to provide additional requirements, because the notion of ordinary activities is derived from the definitions of revenue in the boards’ respective conceptual frameworks. In particular, the IASB’s *Conceptual Framework* description of revenue refers specifically to the ‘ordinary activities of an entity’ and the definition of revenue in FASB Concepts Statement No. 6 refers to the notion of an entity’s ‘ongoing major or central operations’. As noted in paragraph BC29, the boards did not reconsider those definitions as part of the Revenue Recognition project.

BC54 Some respondents asked the boards to clarify whether the parties to some common types of contracts (for example, contracts with collaborators or partners) would meet the definition of a customer. However, the boards decided that it would not be feasible to develop application guidance that would apply uniformly to various industries because the nature of the relationship (ie supplier-customer versus collaboration or partnership) would depend on
specific terms and conditions in those contracts. The boards observed that in many arrangements highlighted by respondents, an entity would need to consider all relevant facts and circumstances, such as the purpose of the activities undertaken by the counterparty, to determine whether the counterparty is a customer. Examples of arrangements in which an entity would need to make that assessment are as follows:

(a) collaborative research and development efforts between biotechnology and pharmaceutical entities or similar arrangements in the aerospace and defence, technology and healthcare industries or in higher education;

(b) arrangements in the oil and gas industry in which partners in an offshore oil and gas field may make payments to each other to settle any differences between their proportionate entitlements to production volumes from the field during a reporting period; and

(c) arrangements in the not-for-profit industry in which an entity receives grants and sponsorship for research activity and the grantor or sponsor may specify how any output from the research activity will be used.

BC55 The boards noted that a contract with a collaborator or a partner (for example, a joint arrangement as defined in IFRS 11 Joint Arrangements or a collaborative arrangement within the scope of Topic 808 Collaborative Arrangements) could also be within the scope of IFRS 15 if that collaborator or partner meets the definition of a customer for some or all of the terms of the arrangement.

BC56 The boards also noted that in some cases it might be appropriate for an entity to apply the principles of IFRS 15 to some transactions with collaborators or partners. For example, an entity might consider applying IFRS 15 to a collaborative arrangement or partnership, provided such application is appropriate in accordance with IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors or, for an entity applying US GAAP, provided there are not more relevant authoritative requirements in US GAAP.

BC57 Notwithstanding the boards’ decision that only contracts with customers should be accounted for under IFRS 15, the boards also decided that some of the requirements in IFRS 15 should apply to the transfer of non-financial assets that are not an output of an entity’s ordinary activities (see paragraphs BC494–BC503).

Exchanges of products to facilitate a sale to another party (paragraph 5(d))

BC58 In industries with homogeneous products, it is common for entities in the same line of business to exchange products to facilitate sales to customers or potential customers other than the parties to the exchange. For example, an oil supplier may swap inventory with another oil supplier to reduce transport costs, meet immediate inventory needs, or otherwise facilitate the sale of oil to the end customer. The boards noted that the party exchanging inventory with the entity meets the definition of a customer, because it has contracted with the entity to obtain an output of the entity’s ordinary activities. Consequently, in the absence of specific requirements, an entity might recognise revenue once for the...
exchange of inventory and then again for the sale of the inventory to the end customer. The boards decided that this outcome would be inappropriate for the following reasons:

(a) it would have grossed up revenues and expenses and made it difficult for users of financial statements to assess the entity’s performance and gross margins during the reporting period; and

(b) some view the counterparty in those arrangements as also acting as a supplier and not as a customer.

The boards considered modifying the definition of a customer. However, they rejected that alternative because of concerns about unintended consequences. Consequently, the boards decided to exclude from the scope of IFRS 15 transactions involving non-monetary exchanges between entities in the same line of business to facilitate sales to customers or to potential customers. The FASB noted such exchanges should remain within the scope of Topic 845 on non-monetary transactions.

Contracts with customers outside the scope of the requirements (paragraph 5)

The boards also excluded from the scope of IFRS 15 three types of contracts with customers that they are addressing in other Standards:

(a) leases;

(b) insurance contracts; and

(c) financial instruments and other contractual rights or obligations within the scope of the boards’ other Standards.

Some respondents asked the FASB to clarify what is meant by ‘contractual rights or obligations’ in paragraph 5 of the requirements, because those respondents stated that it is unclear whether financial instrument arrangements that are addressed elsewhere in the Codification, such as letters of credit and loan commitments (addressed in Topic 440 Commitments), would be included within the scope of Topic 606. The FASB noted that its intention is that if specific requirements in other Topics of the Codification deal with a transaction, the more detailed requirements from those other Topics should be applied rather than the requirements in Topic 606. For example, the FASB decided to exclude from the scope of Topic 606 guarantees (other than product warranties) that are within the scope of Topic 460 Guarantees, because the focus of the existing accounting requirements for those guarantee arrangements relates primarily to recognising and measuring a guarantee liability.

Some respondents reasoned that excluding some contracts with customers from the scope of IFRS 15 (such as those identified in paragraph BC60) could perpetuate the development of industry-specific or transaction-specific revenue recognition guidance, which would be inconsistent with the Revenue Recognition project’s stated objective. The boards disagreed with that view. In the boards’ view, IFRS 15 provides them with a framework for considering revenue issues in other standard-setting projects. The boards decided that,
within the context of those other projects, a different basis of accounting for those contracts with customers might provide users of financial statements with more relevant information.

BC63 Other respondents identified what they perceived to be a contradiction within the scope requirements in IFRS 15 and IFRS 9. Those respondents stated that some of the requirements for accounting for contract assets (which would meet the definition of a financial asset) are inconsistent with the requirements in financial instruments Standards for accounting for financial assets. For example, in some cases a contract asset is not required to be adjusted for the time value of money (see paragraph BC236), and in other cases the contract asset might initially be measured at an amount that excludes some of the expected cash flows if the transaction price includes variable consideration (see paragraphs BC189–BC223). However, the IASB disagreed with those respondents. The IASB noted that the requirements in paragraph 5 of IFRS 15 (together with paragraph 2(k) of IAS 39 Financial Instruments: Recognition and Measurement, which is a consequential amendment to IAS 39 added by IFRS 15) are clear that when a contract asset is within the scope of IFRS 15, it is not within the scope of IFRS 9.

Contracts partially within the scope of other Standards (paragraph 7)

BC64 Some contracts with customers are partially within the scope of IFRS 15 and partially within the scope of other Standards (for example, a lease with a service contract). The boards decided that it would be inappropriate in those cases for an entity to account for the entire contract in accordance with one standard or another. This is because it could result in different accounting outcomes depending on whether the goods or services were sold on a stand-alone basis or together with other goods or services.

BC65 The boards considered whether the requirements in IFRS 15 should be the default approach for separating a contract and allocating consideration to each part. However, specific issues could arise in separating contracts that are not within the scope of IFRS 15. For example, a financial instrument or an insurance contract might require an entity to provide services that are best accounted for in accordance with IFRS 9. Subtopic 942-605 Financial Services—Depository and Lending—Revenue Recognition, IFRS 4 Insurance Contracts, or Subtopic 944-605 Financial Services—Insurance—Revenue Recognition.

BC66 Consequently, the boards decided that if other Standards specify how to separate and/or initially measure parts of a contract, an entity should first apply those Standards. In other words, the more specific Standard would take precedence in accounting for a part of a contract and any residual consideration should be allocated to the part(s) of the contract within the scope of IFRS 15. This rationale is consistent with the principle in IFRS 15 related to scope, which is that another Standard should be applied to a portion of the contract or arrangement if the Standard provides specific requirements for that portion of the contract or arrangement. The boards’ decision is also consistent with the requirements for multiple-element arrangements in US GAAP that were replaced by Topic 606. The boards noted that this decision results in any discount in the overall arrangement being allocated to the portion of the arrangement within the scope of IFRS 15.
Identifying the contract (paragraphs 9–16)

BC67 The boards decided that the revenue recognition model would apply to a contract with a customer only when the criteria in paragraph 9 of IFRS 15 are met. The rationale for those criteria is described in paragraphs BC33–BC46.

BC68 IFRS 15 applies to a single contract with a customer. In many cases, the contract that is accounted for separately will be the individual contract negotiated with the customer. However, the structure and scope of a contract can vary depending on how the parties to the contract decide to record their agreement. For instance, there may be legal or commercial reasons for the parties to use more than one contract to document the sale of related goods or services or to use a single contract to document the sale of unrelated goods or services. One of the boards’ objectives in developing IFRS 15 is that the accounting for a contract should depend on an entity’s present rights and obligations rather than on how the entity structures the contract.

Applying IFRS 15 at a portfolio level

[Refer: paragraph 4]

BC69 IFRS 15 specifies the accounting required for an individual contract. Many entities have a large number of contracts and as a result some respondents noted practical challenges in applying the model on a contract-by-contract basis. These respondents questioned whether it would always be necessary to apply IFRS 15 on a contract-by-contract basis. The boards observed that the way in which an entity applies the model to its contracts is not a matter for which the boards should specify requirements. Nonetheless, in the light of the feedback, the boards decided to include a practical expedient in paragraph 4 of IFRS 15 to acknowledge that a practical way to apply IFRS 15 to some contracts may be to use a ‘portfolio approach’. The boards acknowledged that an entity would need to apply judgement in selecting the size and composition of the portfolio in such a way that the entity reasonably expects that application of the revenue recognition model to the portfolio would not differ materially from the application of the revenue recognition model to the individual contracts or performance obligations in that portfolio. In their discussions, the boards indicated that they did not intend for an entity to quantitatively evaluate each outcome and, instead, the entity should be able to take a reasonable approach to determine the portfolios that would be appropriate for its types of contracts.

BC70 The boards observed that because it is a practical way to apply IFRS 15, the portfolio approach may be particularly useful in some industries in which an entity has a large number of similar contracts and applying the model separately for each contract may be impractical. For example, entities in the telecommunications industry explained that implementing accounting systems to determine the stand-alone selling price for the promised goods or services in each contract and, in turn, allocating the transaction price to the performance obligations identified in that contract would be complex and costly (see paragraphs BC287–BC293).
Combination of contracts (paragraph 17)

BC71 The boards decided to include requirements in paragraph 17 of IFRS 15 for when an entity should combine two or more contracts and account for them as a single contract. This is because, in some cases, the amount and timing of revenue might differ depending on whether an entity accounts for two or more contracts separately or accounts for them as one contract.

BC72 The boards decided that entering into contracts at or near the same time is a necessary condition for the contracts to be combined. That decision is consistent with the objective of identifying the contract that is to be accounted for as the unit of account because that assessment is also performed at contract inception.

BC73 The boards decided that in addition to entering into contracts at or near the same time, the contracts should satisfy one or more of the criteria in paragraph 17 of IFRS 15 for the contracts to be combined. The boards observed that when either criterion (a) or (b) in paragraph 17 of IFRS 15 is met, the relationship between the consideration in the contracts (i.e., the price interdependence) is such that if those contracts were not combined, the amount of consideration allocated to the performance obligations in each contract might not faithfully depict the value of the goods or services transferred to the customer. The boards decided to include the criterion in paragraph 17(c) of IFRS 15 to avoid the possibility that an entity could effectively bypass the requirements for identifying performance obligations depending on how the entity structures its contracts.

BC74 The boards clarified that for two or more contracts to be combined, they should be with the same customer. However, the boards acknowledged that in some situations, contracts with related parties (as defined in IAS 24 Related Party Disclosures and Topic 850 Related Party Disclosures) should be combined if there are interdependencies between the separate contracts with those related parties. Thus, in those situations, combining the contracts with related parties results in a more appropriate depiction of the amount and timing of revenue recognition.

BC75 The boards also considered whether to specify that all contracts should be combined if they were negotiated as a package to achieve a single commercial objective, regardless of whether those contracts were entered into at or near the same time with the same customer. However, the boards decided not to do this, primarily because they were concerned that doing so could have had the unintended consequence of an entity combining too many contracts and not faithfully depicting the entity’s performance. Furthermore, the boards decided that an entity should apply judgement to determine whether a contract is entered into ‘at or near the same time’. However, the boards noted that the longer the period between the commitments of the parties to the contracts, the more likely it is that the economic circumstances affecting the negotiations have changed.

Contract modifications (paragraphs 18–21)

BC76 The boards observed that previous revenue recognition requirements did not include a general framework for accounting for contract modifications. Therefore, the boards decided to include requirements regarding contract
modifications in IFRS 15 to improve consistency in the accounting for contract modifications. As the revenue recognition model developed, the boards proposed different approaches to account for contract modifications. However, each approach was developed with the overall objective of faithfully depicting an entity’s rights and obligations in the modified contract. The boards concluded that to faithfully depict the rights and obligations arising from a modified contract, an entity should account for some modifications prospectively and for other modifications on a cumulative catch-up basis.

The boards decided that a contract modification should be accounted for prospectively if the additional promised goods or services are distinct and the pricing for those goods or services reflects their stand-alone selling price (see paragraph 20 of IFRS 15). The boards decided that when those criteria are met, there is no economic difference between an entity entering into a separate contract for the additional goods or services and an entity modifying an existing contract.

The boards also decided that a contract modification should be accounted for prospectively when the goods or services to be provided after the modification are distinct from the goods or services already provided (see paragraph 21(a) of IFRS 15). The boards decided that this should be the case regardless of whether the pricing of the additional promised goods or services reflected their stand-alone selling prices. This is because accounting for those types of modifications on a cumulative catch-up basis could be complex and may not necessarily faithfully depict the economics of the modification, because the modification is negotiated after the original contract and is based on new facts and circumstances. Therefore, this approach avoids opening up the accounting for previously satisfied performance obligations and, thus, avoids any adjustments to revenue for satisfied performance obligations.

Some respondents were concerned that an entity would also be required to use a cumulative catch-up basis to account for modifications to a contract with a single performance obligation that is made up of a series of distinct goods or services. Those contracts typically include repetitive services, such as energy contracts or mobile phone airtime services. The boards considered those concerns and clarified in paragraph 21(a) of IFRS 15 that the determination of whether a modification is accounted for prospectively depends on whether the remaining promises in the contract are for distinct goods or services. This is the case even if an entity determines that it has a single performance obligation, provided that the performance obligation represents a series of distinct goods or services (see paragraphs BC113–BC116).

The boards decided that if the remaining goods or services are not distinct and are part of a single performance obligation that is partially satisfied (ie a performance obligation satisfied over time), an entity should recognise the effect of the modification on a cumulative catch-up basis. This requires an entity to update the transaction price and the measure of progress towards complete satisfaction of a performance obligation, both of which may change as a result of the contract modification. That approach is particularly relevant to, and generally accepted in, the construction industry because a modification to those
types of contracts would typically not result in the transfer of additional goods or services that are distinct from those promised in the existing contract.

Respondents also asked how the requirements for contract modifications would apply to unpriced change orders (see paragraph BC39) and contract claims (ie specific modifications in which the changes in scope and price are unapproved or in dispute). IFRS and US GAAP previously included specific guidance for unpriced change orders and contract claims within construction-type and production-type contracts. The boards decided that it was unnecessary to provide specific requirements for the accounting for these types of modifications because IFRS 15 includes the relevant requirements, specifically:

(a) paragraphs 18 and 19 of IFRS 15 require an entity to determine whether the rights and obligations of the parties to the contract that are created or changed by the unpriced change order or contract claim are enforceable;

(b) paragraph 19 of IFRS 15 requires an entity to estimate the change to the transaction price for the unpriced change order or contract claim; and

(c) paragraph 21 of IFRS 15 requires an entity to determine whether the unpriced change order or contract claim should be accounted for on a prospective basis or a cumulative catch-up basis.

Interaction between changes in the transaction price and contract modifications

The 2011 Exposure Draft proposed that an entity would account for contract modifications that result only in a change in the contract price on a cumulative catch-up basis because this would be consistent with the requirements for changes in the transaction price (as a result of changes in the estimate of variable consideration). In their redeliberations, the boards noted that the proposal would result in very different accounting outcomes depending on whether a distinct good or service was included in the modification. This is because modifications that change only the price would be accounted for on a cumulative catch-up basis, whereas modifications in which a distinct good or service (no matter how small) is added to the contract at the same time as a price change would be accounted for on a prospective basis. Furthermore, the boards noted that changes in the transaction price arising from a contract modification and changes in the expectations of variable consideration are the result of different economic events—a change in the expectation of variable consideration arises from a change in a variable that was identified and agreed upon at contract inception, whereas a change in price arising from a contract modification arises from a separate and subsequent negotiation between the parties to the contract. Consequently, the boards decided that a contract modification resulting only in a change in the contract price should be accounted for in a manner that is consistent with other contract modifications.

[Refer: paragraph 90]

Some respondents requested that the boards clarify how an entity should allocate a change in the transaction price that occurs after a modification of the contract (that is accounted for in accordance with paragraph 21(a) of IFRS 15)
but the change in the transaction price is attributable to an amount of variable consideration promised before the modification. This may occur because the estimate of the amount of variable consideration in the initial contract has changed or is no longer constrained. Specifically, those respondents asked whether, in those circumstances, an entity should allocate the corresponding change in the transaction price to the performance obligations in the modified contract, or to the performance obligations identified in the contract before the modification (i.e., the initial contract), including to performance obligations that were satisfied before the modification. In response to that feedback, the boards clarified in paragraph 90 of IFRS 15 that the allocation of the change in transaction price in those circumstances depends on whether, and the extent to which, the change in the transaction price is attributable to an amount of variable consideration promised before the modification. In providing that clarification, the boards noted that it would be appropriate in those circumstances to allocate a change in the transaction price to the performance obligations identified in the initial contract, if the promised variable consideration and the resolution of the uncertainty associated with that amount of variable consideration are not affected by the contract modification.

Identifying performance obligations

Definition of a performance obligation (Appendix A)

IFRS 15 distinguishes between obligations to provide goods or services to a customer and other obligations by defining those obligations to provide goods or services as performance obligations. The notion of a performance obligation is similar to the notions of deliverables, components or elements of a contract in previous revenue Standards. Although the notion of a performance obligation is implicit in previous revenue Standards, the term ‘performance obligation’ has not been defined previously.

The boards’ objective in developing the definition of a performance obligation was to ensure that entities appropriately identify the unit of account for the goods and services promised in a contract with a customer. The boards decided that because the revenue recognition model is an allocated transaction price model, identifying a meaningful unit of account that depicts the goods and services in the contract is fundamental for the purpose of recognising revenue on a basis that faithfully depicts the entity’s performance in transferring the promised goods or services to the customer.

The boards decided that a performance obligation could be either of the following:

(a) a good or service (or a bundle of goods or services) that is distinct (see paragraphs BC94–BC112); or

(b) a series of distinct goods or services that are substantially the same and have the same pattern of transfer (see paragraphs BC113–BC116).
Identifying the promised goods or services
(paragraphs 24–25)

Before an entity can identify its performance obligations in a contract with a customer, the entity would first need to identify all of the promised goods or services in that contract. The boards noted that in many cases, all of the promised goods or services in a contract might be identified explicitly in that contract. However, in other cases, promises to provide goods or services might be implied by the entity’s customary business practices. The boards decided that such implied promises should be considered when determining the entity’s performance obligations, if those practices create a valid expectation of the customer that the entity will transfer a good or service (for example, some when-and-if-available software upgrades). The boards also noted that the implied promises in the contract do not need to be enforceable by law. If the customer has a valid expectation, then the customer would view those promises as part of the negotiated exchange (ie goods or services that the customer expects to receive and for which it has paid). The boards noted that in the absence of these requirements developed by the boards, an entity might recognise all of the consideration in a contract as revenue even though the entity continues to have remaining (implicit) promises related to the contract with the customer.

Some respondents suggested that some promised goods or services should be excluded from the scope of IFRS 15 and accounted for as marketing expenses or incidental obligations, even though those promises would meet the definition of a performance obligation. Examples of such promised goods or services may include ‘free’ handsets provided by telecommunication entities, ‘free’ maintenance provided by automotive manufacturers and customer loyalty points awarded by supermarkets, airlines and hotels. Those respondents stated that revenue should be recognised only for the main goods or services for which the customer has contracted and not for what they consider to be marketing incentives and other incidental obligations.

The boards observed that when a customer contracts with an entity for a bundle of goods or services, it can be difficult and subjective for the entity to identify the main goods or services for which the customer has contracted. In addition, the outcome of that assessment could vary significantly depending on whether the entity performs the assessment from the perspective of its business model or from the perspective of the customer. Consequently, the boards decided that all goods or services promised to a customer as a result of a contract give rise to performance obligations because those promises were made as part of the negotiated exchange between the entity and its customer. Although the entity might consider those goods or services to be marketing incentives or incidental goods or services, they are goods or services for which the customer pays and to which the entity should allocate consideration for purposes of revenue recognition. However, the boards observed that in some cases, an entity might provide incentives to a customer that would not represent a performance obligation if those incentives are provided independently of the contract that they are designed to secure. (See paragraphs BC386–BC395 for additional discussion on marketing incentives and the accounting for customer options to acquire additional goods or services.)
For similar reasons, the boards decided not to exempt an entity from accounting for performance obligations that the entity might regard as being perfunctory or inconsequential. Instead, an entity should assess whether those performance obligations are immaterial to its financial statements as described in IAS 8 and FASB Concepts Statement No. 8 Conceptual Framework for Financial Reporting.

To help an entity identify the promised goods or services, IFRS 15 provides examples of the types of promises that can represent goods or services to the customer. In response to feedback received, the boards clarified that the following can also represent promised goods or services:

(a) providing a service of standing ready or making goods or services available (see paragraph BC160); and
(b) granting rights to goods or services to be provided in the future (see paragraph BC92).

The boards observed that it was important to clarify that granting a right to goods or services to be provided in the future, such as when an entity makes a promise to provide goods or services to its customer’s customer, would give rise to performance obligations for the entity. Those types of promises exist in distribution networks in various industries but are particularly common in the automotive industry. For example, when a manufacturer sells a motor vehicle to its customer (a dealer), the manufacturer may also promise to provide additional goods or services (such as maintenance) to the dealer’s customer. IFRS 15 requires an entity to identify all of the promises—both explicit and implicit—that are made to the customer as part of the contract with that customer. Consequently, a promise of a good or service (such as maintenance) that the customer can pass on to its customer would be a performance obligation if the promise could be identified (explicitly or implicitly) in the contract with the customer. However, the boards noted that some promised goods or services might not represent performance obligations if those promises did not exist (explicitly or implicitly) at the time that the parties agreed to the contract.

The boards also clarified that an entity should not account for activities it may perform that do not transfer goods or services to the customer. This may occur in many contracts in which an entity undertakes separate activities that do not directly transfer goods or services to the customer (for example, service contracts that require significant setup costs), even though those activities are required to successfully transfer the goods or services for which the customer has contracted. The boards decided that including those activities as performance obligations would have been inconsistent with the core revenue recognition principle because those activities do not result in a transfer of goods or services to the customer.

Identifying when promises represent performance obligations (paragraphs 22–30)

Contracts with customers can include many promises to transfer goods or services. In the Discussion Paper, the boards proposed that an entity should review the timing of the transfer of the promised goods or services to identify
the performance obligations that it should account for separately. Respondents
to the Discussion Paper were concerned that this proposal would have required
an entity to account separately for every promised good or service in a contract
that is transferred at a different time, which would not be practical for many
contracts, especially for long-term service and construction contracts.
Consequently, the boards decided to provide clearer requirements that result in
an entity identifying performance obligations in a way that is practical and
results in a pattern of revenue recognition that faithfully depicts the transfer of
goods or services to the customer.

In developing those requirements, the boards observed that in many contracts,
identifying the promised goods or services that an entity should account for
separately is straightforward. Consequently, the boards developed a principle
for identifying performance obligations that separates promised goods or
services in a relevant way when applied across the various industries and
transactions within the scope of IFRS 15. That principle is the notion of a
distinct good or service. The term ‘distinct’, in an ordinary sense, suggests
something that is different, separate or dissimilar. A majority of respondents
agreed with using the principle of distinct goods or services to identify the
performance obligations in a contract. However, many asked the boards to
refine and further clarify the requirements for determining when a good or
service is distinct.

Consequently, the boards decided that for a good or service to be distinct, the
criteria in paragraph 27 of IFRS 15 must be met. The boards’ deliberations of
those criteria are discussed in the following sections.

Capable of being distinct

The boards decided that a good or service must possess some specified minimum
characteristics to be accounted for separately. Specifically, the good or service
must be capable of being distinct—that is, the good or service is capable of
providing a benefit to the customer either on its own or together with other
resources that are readily available to the customer. The boards were concerned
that requiring an entity to account separately (and estimate a stand-alone selling
price) for a good or service that is not capable of providing a benefit to the
customer might result in information that would not be relevant to users of
financial statements. For example, if an entity transferred a machine to the
customer, but the machine is only capable of providing a benefit to the
customer after an installation process that only the entity can provide, the
machine would not be distinct.

The 2010 Exposure Draft addressed this notion of a minimum characteristic by
proposing that a good or service should have a distinct function—that is, the
good or service should have utility either on its own or together with other
goods or services that the customer has acquired from the entity or that are sold
separately by the entity or another entity. Respondents requested additional
guidance on the meaning of ‘distinct function’ because they considered that
almost any element of a contract could have utility in combination with other
goods or services.
Consequently, the boards refined the notion of distinct function and developed the criterion in paragraph 27(a) of IFRS 15. In addition, the boards included the requirements in paragraph 28 of IFRS 15 (which were derived from the Basis for Conclusions on the 2011 Exposure Draft) to help an entity apply that criterion and assess whether a customer can benefit from the good or service on its own or together with other resources. Those requirements focus on the notion of economic benefits, which many respondents explained was helpful in assessing whether the customer can benefit from the good or service on its own or together with other resources. The boards noted that, conceptually, any good or service that is regularly sold separately should be able to be used on its own or with other resources. Otherwise, there would be no market for an entity to provide that good or service on a stand-alone basis.

The boards observed that the assessment of whether the ‘customer can benefit from the goods or services on its own’ should be based on the characteristics of the goods or services themselves instead of the way in which the customer may use the goods or services. Consequently, an entity would disregard any contractual limitations that might preclude the customer from obtaining readily available resources from a source other than the entity.

The attributes of a distinct good or service are comparable to previous revenue recognition requirements for identifying separate deliverables in a multiple-element arrangement, which specified that a delivered item must have ‘value to the customer on a stand-alone basis’ for an entity to account for that item separately. However, the boards decided against using that terminology to avoid the implication that an entity must assess the customer’s intended use for the promised goods or services in identifying the performance obligations in a contract. The boards observed that it would be difficult, if not impossible, for an entity to know the customer’s intentions in a given contract.

Distinct within the context of the contract

In some cases, even though the individual goods or services promised as a bundle of goods or services might be capable of being distinct, those goods or services should not be accounted for separately because it would not result in a faithful depiction of the entity’s performance in that contract. As an example, many construction-type and production-type contracts involve transferring to the customer many goods and services that are capable of being distinct (such as various building materials, labour and project management services). However, identifying all of those individual goods and services as separate performance obligations would be impractical and, more importantly, it would neither faithfully represent the nature of the entity’s promise to the customer nor result in a useful depiction of the entity’s performance. This is because it would result in an entity recognising and measuring revenue when the materials and other inputs to the construction or production process are provided, instead of recognising and measuring revenue when the entity performs (and uses those inputs) in the construction or production of the item (or items) for which the customer has contracted. Consequently, the boards decided that, when identifying whether goods or services are distinct, an entity should not only consider the characteristics of an individual good or service (see paragraph 27(a)
of IFRS 15) but should also consider whether the promise to transfer the good or service is separately identifiable (ie distinct within the context of the contract, see paragraph 27(b) of IFRS 15).

BC103 During the development of IFRS 15, the existence of 'separable risks' was identified as a basis for assessing whether a good or service is distinct within the context of the contract. In that assessment, the individual goods or services in a bundle would not be distinct if the risk that an entity assumes to fulfil its obligation to transfer one of those promised goods or services to the customer is a risk that is inseparable from the risk relating to the transfer of the other promised goods or services in that bundle. The boards considered whether to specify 'separable risks' as a necessary attribute of a distinct good or service. However, the boards decided that the concept of 'separable risks' may not be a practical criterion for determining whether a good or service is distinct.

BC104 To make the notion of separable risks more operable, the boards considered other approaches for articulating the notion. However, the boards rejected those approaches for the following reasons:

(a) distinct profit margin—in some cases, entities may decide to assign the same margin to various goods or services, even though those goods or services use different resources and are subject to different risks. In addition, for some goods or services, especially software and other types of intellectual property, cost is not a significant factor in determining price and, therefore, margins could be highly variable because they may be determined by the customer’s ability to pay or to obtain substitute goods or services from another entity.

(b) criteria based on the notions of goods or services that are significantly modified or customised, and highly interrelated goods or services that require an entity to provide a significant service of integrating those goods or services—respondents explained that while these are relevant factors to consider to determine whether a good or service is distinct, expressing those factors as criteria could be too restrictive because they could force bundling or unbundling that did not reflect the economics of the arrangement.

BC105 Consequently, the boards decided to specify in paragraph 27(b) of IFRS 15 that the objective in identifying whether a promised good or service is distinct within the context of the contract is to determine whether an entity’s promise to transfer that good or service is separately identifiable from other promises in the contract. The notion of ‘separately identifiable’ is based on the notion of separable risks in paragraph BC103 (ie whether the risk that an entity assumes to fulfil its obligation to transfer one of those promised goods or services to the customer is a risk that is inseparable from the risk relating to the transfer of the other promised goods or services). The boards observed that determining whether the entity’s promise to transfer a good or service is separately identifiable requires judgement, taking into account all of the facts and circumstances. The boards decided to assist entities in making that judgement by including the factors in paragraph 29 of IFRS 15.
The boards observed that the factors in paragraph 29 of IFRS 15 are not mutually exclusive. On the contrary, because the factors are based on the same underlying principle of inseparable risks, the boards noted that in many cases more than one of the factors might apply to a contract with a customer. However, each factor was developed because it may be more applicable for particular contracts or industries. The rationale for each factor is discussed in paragraphs BC107–BC112.

**Significant integration service (paragraph 29(a))**

BC107 In circumstances in which an entity provides an integration service, the risk of transferring individual goods or services is inseparable, because a substantial part of the entity’s promise to a customer is to ensure the individual goods or services are incorporated into the combined output. Thus, the individual goods or services are inputs to produce a single output. The boards observed that this factor may be relevant in many construction contracts in which the contractor provides an integration (or contract management) service to manage and co-ordinate the various construction tasks and to assume the risks associated with the integration of those tasks. Moreover, the integration service will require a contractor to co-ordinate the tasks performed by any subcontractors and ensure that those tasks are performed in accordance with the contract specifications, thus ensuring the individual goods or services are appropriately incorporated into the combined item for which the customer has contracted.

The boards observed that this factor could apply to industries other than the construction industry. For example, some software development contracts with significant integration services will similarly have promised goods and services that meet the criterion in paragraph 27(b) of IFRS 15. However, the boards did not intend for this factor to be applied too broadly to software integration services for which the risk that the entity assumes in integrating the promised goods or services is negligible (for example, a simple installation of software that does not require significant modification). Therefore, to provide some additional clarification for many software-type contracts, the boards included the factor in paragraph 29(b) of IFRS 15.

**Significant modification or customisation (paragraph 29(b))**

BC109 In some industries, such as the software industry, the notion of inseparable risks is more clearly illustrated by assessing whether one good or service significantly modifies or customises another good or service. This is because if a good or service modifies or customises another good or service in the contract, each good or service is being assembled together (ie as inputs) to produce a combined output for which the customer has contracted.

For example, an entity may promise to provide a customer with existing software and also promise to customise that software so that it will function with the customer’s existing infrastructure such that the entity is providing the customer with a fully integrated system. In this case, if the customisation service requires the entity to significantly modify the existing software in such a way that the risks of providing the software and the customisation service are inseparable, the entity may conclude that the promises to transfer the software
and the customisation service would not be separately identifiable and, therefore, those goods or services would not be distinct within the context of the contract.

**Highly dependent or highly interrelated (paragraph 29(c))**

BC111 The boards decided to include the factor in paragraph 29(c) of IFRS 15 because, in some cases, it might be unclear whether the entity is providing an integration service (see paragraph 29(a)) or whether the goods or services are significantly modified or customised (see paragraph 29(b)). However, the individual goods and services in the contract may still not be separately identifiable from the other goods or services promised in the contract. This may be because the goods or services are highly dependent on, or highly interrelated with, other promised goods or services in the contract in such a way that the customer could not choose to purchase one good or service without significantly affecting the other promised goods or services in the contract.

BC112 Consider the following example—an entity agrees to design an experimental new product for a customer and to manufacture 10 prototype units of that product. The specifications for the product include functionality that has yet to be proved. Consequently, the entity will be required to continue to revise the design of the product during the construction and testing of the prototypes and make any necessary modifications to in-progress or completed prototypes. The entity expects that most or all of the units to be produced may require some rework because of design changes made during the production process. In that case, the customer may not be able to choose whether to purchase only the design service or the manufacturing service without significantly affecting one or the other. This is because the risk of providing the design service is inseparable from the manufacturing service. Thus, although each promise may have benefit on its own, within the context of the contract, they are not separately identifiable. This is because the entity determines that each promise is highly dependent on, and highly interrelated with, the other promises in the contract.

**A series of distinct goods or services that are substantially the same and have the same pattern of transfer (paragraph 22(b))**

BC113 The boards decided to specify that a promise to transfer a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the customer would be a single performance obligation if two criteria are met. The boards decided to include this notion as part of the definition of a performance obligation to simplify the application of the model and to promote consistency in the identification of performance obligations in circumstances in which the entity provides the same good or service consecutively over a period of time (for example, a repetitive service arrangement). To be accounted for as a single performance obligation, each of those promised goods or services must be performance obligations satisfied over time in accordance with paragraph 35 of IFRS 15.

BC114 The boards observed that without this part of the definition, applying the model might present some operational challenges when an entity provides a series of
distinct goods or services that are substantially the same. Otherwise, the entity would be required to identify multiple distinct goods or services, allocate the transaction price to each of the resulting performance obligations on a stand-alone selling price basis and then recognise revenue when those performance obligations are satisfied. For example, in a repetitive service contract such as a cleaning contract, transaction processing or a contract to deliver electricity, an entity would be required to allocate the overall consideration to each increment of service (for example, each hour of cleaning) to be provided in the contract. The boards decided that it would not be cost-effective to apply the model in this manner and determined that including paragraph 22(b) of IFRS 15 as part of the definition of a performance obligation would alleviate costs. This is because when paragraph 22(b) of IFRS 15 applies (ie the contract includes a promise to transfer a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer), an entity will identify a single performance obligation and allocate the transaction price to the performance obligation. The entity will then recognise revenue by applying a single measure of progress to that performance obligation.

The boards noted that if an entity determines it has a performance obligation that meets the criterion in paragraph 22(b) of IFRS 15, an entity should consider the distinct goods or services in the contract, rather than the performance obligation, for the purposes of contract modifications and the allocation of variable consideration.

In their redeliberations, the boards observed that paragraph 22(b) of IFRS 15 applies to goods or services that are delivered consecutively, rather than concurrently. The boards noted that IFRS 15 would not need to specify the accounting for concurrently delivered distinct goods or services that have the same pattern of transfer. This is because, in those cases, an entity is not precluded from accounting for the goods or services as if they were a single performance obligation, if the outcome is the same as accounting for the goods and services as individual performance obligations.

Satisfaction of performance obligations (paragraphs 31–45)

Revenue is recognised when (or as) goods or services are transferred to a customer. This is because an entity satisfies its performance obligation by transferring control of the promised good or service underlying that performance obligation to the customer. Consequently, assessing when control of a good or service is transferred is a critical step in applying IFRS 15.

Control

Most previous revenue Standards required an entity to assess the transfer of a good or service by considering the transfer of risks and rewards of ownership. However, the boards decided that an entity should assess the transfer of a good or service by considering when the customer obtains control of that good or service, for the following reasons:
Both goods and services are assets that a customer acquires (even if many services are not recognised as an asset because those services are simultaneously received and consumed by the customer), and the boards’ existing definitions of an asset use control to determine when an asset is recognised or derecognised.

Assessing the transfer of goods or services using control should result in more consistent decisions about when goods or services are transferred, because it can be difficult for an entity to judge whether an appropriate level of the risks and rewards of ownership of a good or service has been transferred to the customer if the entity retains some risks and rewards.

A risks-and-rewards approach could conflict with identifying performance obligations. For example, if an entity transfers a product to a customer but retains some risks associated with that product, an assessment based on risks and rewards might result in the entity identifying a single performance obligation that could be satisfied (and therefore revenue would be recognised) only after all the risks are eliminated. However, an assessment based on control might appropriately identify two performance obligations—one for the product and another for a remaining service, such as a fixed price maintenance agreement. Those performance obligations would be satisfied at different times.

Many respondents to both the 2010 and the 2011 Exposure Drafts agreed with using control to determine when a good or service is transferred to a customer. However, some respondents indicated that the transfer of the risks and rewards of ownership is sometimes a helpful indicator that control has transferred (see paragraph BC154).

Developing the notion of control

The boards’ description of control is based on the meaning of control in the definitions of an asset in the boards’ respective conceptual frameworks. Thus, the boards determined that control of a promised good or service (ie an asset) is the customer’s ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. The components that make up the description of control are explained as follows:

ability—a customer must have the present right to direct the use of, and obtain substantially all of the remaining benefits from, an asset for an entity to recognise revenue. For example, in a contract that requires a manufacturer to produce an asset for a particular customer, it might be clear that the customer will ultimately have the right to direct the use of, and obtain substantially all of the remaining benefits from, the asset. However, the entity should not recognise revenue until the customer has actually obtained that right (which, depending on the contract, might occur during production or afterwards).

direct the use of—a customer’s ability to direct the use of an asset refers to the customer’s right to deploy that asset in its activities, to allow another entity to deploy that asset in its activities, or to restrict another entity from deploying that asset.
obtain the benefits from—the customer must have the ability to obtain substantially all of the remaining benefits from an asset for the customer to obtain control of it. Conceptually, the benefits from a good or service are potential cash flows (either an increase in cash inflows or a decrease in cash outflows). A customer can obtain the benefits directly or indirectly in many ways, such as by using, consuming, disposing of, selling, exchanging, pledging or holding an asset.

The boards observed that the assessment of when control has transferred could be applied from the perspective of either the entity selling the good or service or the customer purchasing the good or service. Consequently, revenue could be recognised when the seller surrenders control of a good or service or when the customer obtains control of that good or service. Although in many cases both perspectives lead to the same result, the boards decided that control should be assessed primarily from the perspective of the customer. That perspective minimises the risk of an entity recognising revenue from undertaking activities that do not coincide with the transfer of goods or services to the customer.

Applying the notion of control

As described in paragraph BC119, many respondents agreed with using control as the basis for assessing when the transfer of a promised good or service (ie an asset) occurs. However, most respondents to the 2010 Exposure Draft explained that the definition was most helpful when applied to performance obligations for the transfer of goods. They commented that applying the concept of control is straightforward in those cases because, typically, it is clear that an asset has transferred from the entity to its customer. They noted, however, that the requirements were more difficult to apply to performance obligations for services and construction-type contracts, because it could be difficult to determine when a customer obtains control of a service. This is because in many service contracts the service asset is simultaneously created and consumed and, therefore, is never recognised as an asset by the customer. Even in the case of a construction contract in which there is a recognisable asset, it can be difficult to assess whether a customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, a partially completed asset that the seller is creating. Consequently, many respondents in the construction industry were concerned that they would be required to change their revenue recognition policy from using a percentage-of-completion method to a completed contract method (ie on the basis that the transfer of assets occurs only upon transfer of legal title or physical possession of the finished asset, which typically occurs upon contract completion). Those respondents explained that the outcome of applying the completed contract method to their contracts with customers would not be a faithful depiction of the economics of those contracts.

As a result, some respondents suggested that the boards provide guidance for the transfer of control of services separately from the guidance for goods. However, the boards observed that it would be difficult to clearly define a service and not all contracts that are commonly regarded as services result in a transfer of resources to customers over time. Furthermore, the boards decided that the notion of control should apply equally to both goods and services.
Consequently, to address respondents’ concerns, the boards decided to specify requirements that focus on the attribute of the timing of when a performance obligation is satisfied (ie when a good or service is transferred to a customer). Accordingly, IFRS 15 includes criteria for determining whether a performance obligation is satisfied over time. Those criteria are explained in the following paragraphs.

**Performance obligations satisfied over time (paragraphs 35–37)**

The boards developed the criteria in paragraph 35 of IFRS 15 to provide an objective basis for assessing when control transfers over time and, thus, when a performance obligation is satisfied over time.

**Customer simultaneously receives and consumes benefits as entity performs (paragraph 35(a))**

In many typical service contracts, the entity’s performance creates an asset only momentarily, because that asset is simultaneously received and consumed by the customer. In those cases, the simultaneous receipt and consumption of the asset that has been created means that the customer obtains control of the entity’s output as the entity performs and, thus, the entity’s performance obligation is satisfied over time. For example, consider an entity that promises to process transactions on behalf of a customer. The customer simultaneously receives and consumes a benefit as each transaction is processed.

The boards observed that there may be service-type contracts in which it is unclear whether the customer receives and consumes the benefit of the entity's performance over time. This is because the notion of 'benefit' can be subjective. Consider, for example, a freight logistics contract in which the entity has agreed to transport goods from Vancouver to New York City. Many respondents suggested that the customer receives no benefit from the entity’s performance until the goods are delivered to New York City. However, the boards observed that the customer does benefit from the entity’s performance as it occurs because if the goods were delivered only part way (for example, to Chicago), another entity would not need to substantially re-perform the entity’s performance to date—that is, another entity would not need to take the goods back to Vancouver to deliver them to New York City. The boards observed that, in those cases, the assessment of whether another entity would need to substantially re-perform the performance completed to date can be used as an objective basis for determining whether the customer receives benefit from the entity's performance as it is provided.

The boards decided that an entity should disregard any contractual or practical limitations when it assesses the 'simultaneously receives and consumes' criterion and whether another entity would need to substantially re-perform the performance completed to date. This is because the objective of this criterion is to determine whether control of the goods or services has already been transferred to the customer. This is done by using a hypothetical assessment of what another entity would need to do if it were to take over the remaining performance. Thus, actual practical or contractual limitations on the remaining...
performance would have no bearing on the assessment of whether the entity has transferred control of the goods or services provided to date.

BC128 The boards also observed that this criterion is not intended to apply to contracts in which the entity’s performance is not immediately consumed by the customer, which would be typical in cases in which the entity’s performance results in an asset (such as work-in-progress). Consequently, an entity that applies IFRS 15 to contracts in which the entity’s performance results in an asset (which could be intangible) being created or enhanced should consider the criteria in paragraph 35(b) and (c) of IFRS 15.

Performance creates or enhances an asset that the customer controls as it is created (paragraph 35(b))

BC129 The boards included this criterion to address situations in which an entity’s performance creates or enhances an asset that a customer clearly controls as the asset is created or enhanced. In those cases, because the customer controls any work in progress, the customer is obtaining the benefits of the goods or services that the entity is providing and, thus, the performance obligation is satisfied over time. For example, in the case of a construction contract in which the entity is building on the customer’s land, the customer generally controls any work in progress arising from the entity’s performance.

BC130 The boards observed that the basis for this criterion is consistent with the rationale for using the ‘percentage-of-completion’ revenue recognition approach in previous revenue guidance in US GAAP. That guidance acknowledged that in many construction contracts the entity has, in effect, agreed to sell its rights to the asset (ie work-in-progress) as the entity performs. Accordingly, the parties have agreed, in effect, to a continuous sale (ie the customer controls the work-in-progress) that occurs as the work progresses.

BC131 Many respondents explained that this criterion would be straightforward and helpful in cases in which the customer clearly controls the asset that is being constructed or enhanced. However, the boards observed that for some performance obligations, it may be unclear whether the asset that is created or enhanced is controlled by the customer. Consequently, it may be more challenging to determine when control transfers in those cases and, therefore, the boards developed a third criterion in paragraph 35(c) of IFRS 15.

Performance does not create an asset with an alternative use to the entity and the entity has an enforceable right to payment for performance completed to date (paragraph 35(c))

BC132 The boards observed that, in some cases, applying the criteria in paragraph 35(a) and (b) of IFRS 15 could be challenging. Consequently, the boards developed a third criterion to help with the assessment of control. The boards observed that this criterion may be necessary for services that may be specific to a customer (for example, consulting services that ultimately result in a professional opinion for the customer) but also for the creation of tangible (or intangible) goods.

BC133 The notions of ‘alternative use’ and ‘right to payment’ are described in the following paragraphs.
Performance does not create an asset with an alternative use

BC134 The boards developed the notion of alternative use to exclude the circumstances in which the entity’s performance would not result in the transfer of control of goods or services to the customer over time. This is because when the entity’s performance creates an asset with an alternative use to the entity, the entity could readily direct the asset to another customer and, therefore, the customer would not control the asset as it is being created. This may occur in the creation of many standard inventory-type items for which the entity has the discretion to substitute across different contracts with customers. In those cases, the customer cannot control the asset because the customer does not have the ability to restrict the entity from directing the asset to another customer.

BC135 Conversely, when an entity creates an asset that is highly customised for a particular customer, the asset would be less likely to have an alternative use. This is because the entity would incur significant costs to reconfigure the asset for sale to another customer (or would need to sell the asset for a significantly reduced price). In that case, the customer could be regarded as receiving the benefit of that performance and, consequently, as having control of the goods or services (i.e., the asset being created) as the performance occurs. (However, an entity would also need to consider whether a right to payment exists to conclude that control transfers over time, see paragraphs BC142–BC148.)

BC136 In assessing whether the asset has an alternative use, the entity would need to consider practical limitations and contractual restrictions on directing the asset for another use. In determining whether the entity is limited practically from directing the asset for another use, the boards decided that an entity should consider the characteristics of the asset that will ultimately be transferred to the customer. This is because, for some assets, it is not the period of time for which the asset has no alternative use that is the critical factor in making the assessment but, instead, whether the asset that is ultimately transferred could be redirected without a significant cost of rework. This may occur in some manufacturing contracts in which the basic design of the asset is the same across all contracts, but the customisation is substantial. Consequently, redirecting the asset in its completed state to another customer would require significant rework.

BC137 Although the level of customisation might be a helpful factor to consider when assessing whether an asset has an alternative use, the boards decided that it should not be a determinative factor. This is because in some cases (for example, some real estate contracts), an asset may be standardised but may still not have an alternative use to an entity, as a result of substantive contractual restrictions that preclude the entity from readily directing the asset to another customer. If a contract precludes an entity from transferring an asset to another customer and that restriction is substantive, the entity does not have an alternative use for that asset because it is legally obliged to direct the asset to the customer. Consequently, this indicates that the customer controls the asset as it is created, because the customer has the present ability to restrict the entity from directing that asset to another customer (an entity would also need to consider whether a right to payment exists to conclude that control of the asset transfers over time).
as it is created, see paragraphs BC142–BC148). The boards observed that contractual restrictions are often relevant in real estate contracts, but might also be relevant in other types of contracts.

BC138 The boards also noted that contractual restrictions that provide a protective right to the customer would not be sufficient to establish that an asset has no alternative use to the entity. The boards observed that a protective right typically results in the entity having the practical ability to physically substitute or redirect the asset without the customer being aware of or objecting to the change. For example, a contract might state that an entity cannot transfer a good because a customer has legal title to the goods in the contract. However, the customer’s legal title to the goods is intended to protect the customer in the event of the entity’s liquidation and the entity can physically substitute and redirect the goods to another customer for little cost. In this example, the contractual restriction is merely a protective right and does not indicate that control of the goods have transferred to the customer.

BC139 Some respondents observed that requiring an entity to consider contractual and practical restrictions in paragraph 35(c) of IFRS 15 seems to contradict the requirements in paragraph B4 of IFRS 15 to ignore contractual and practical limitations when applying the criterion in paragraph 35(a) of IFRS 15. The boards noted that this difference is appropriate. Although the objective of both criteria is to assess when control transfers over time, each criterion provides a different method for assessing when that control transfers, because the criteria were designed to apply to different scenarios.

BC140 The boards decided that the assessment of alternative use should be completed only at contract inception and should not be updated. Otherwise, an entity would need to continually reassess whether the asset has an alternative use, which could lead to a pattern of performance (and, therefore, revenue recognition) that is not useful.

BC141 The boards also decided that while the notion of alternative use is a necessary part of the criterion in paragraph 35(c), it is not enough to conclude that a customer controls an asset. Consequently, the boards decided that to demonstrate that a customer controls an asset that has no alternative use as it is being created, an entity must also have an enforceable right to payment for performance completed to date.

The entity has an enforceable right to payment for performance completed to date

BC142 The boards decided that there is a link between the assessment of control and the factors of no alternative use and a ‘right to payment’. This is because if an asset that an entity is creating has no alternative use to the entity, the entity is effectively constructing an asset at the direction of the customer. Consequently, the entity will want to be economically protected from the risk of the customer terminating the contract and leaving the entity with no asset or an asset that has little value to the entity. That protection will be established by requiring that if the contract is terminated, the customer must pay for the entity’s performance completed to date. This is consistent with other exchange contracts in which a customer would typically be obliged to pay only if it has received control of
goods or services in the exchange. Consequently, the fact that the customer is obliged to pay for the entity’s performance (or, in other words, is unable to avoid paying for that performance) suggests that the customer has obtained the benefits from the entity’s performance.

BC143 The boards intended the term ‘right to payment’ to refer to a payment that compensates an entity for its performance completed to date rather than, for example, a payment of a deposit or a payment to compensate the entity for inconvenience or loss of profit. This is because the underlying objective of the criterion is to determine whether the entity is transferring control of goods or services to the customer as an asset is being created for that customer. Consequently, assuming there is rational behaviour and that there are no broader perceived economic benefits that might exist outside the scope of the contract with the customer, the entity would only agree to transfer control of the goods or services to the customer if the entity is compensated for the costs associated with fulfilling the contract and it receives a profit margin that includes a return on those costs.

BC144 The boards noted that the compensation to which the entity would be entitled upon termination by the customer might not always be the contract margin, because the value transferred to a customer in a prematurely terminated contract may not be proportional to the value if the contract was completed. However, the boards decided that to demonstrate compensation for performance completed to date, the compensation should be based on a reasonable proportion of the entity’s expected profit margin or be a reasonable return on the entity’s cost of capital. Furthermore, the boards noted that the focus should be on the amount to which the entity would be entitled upon termination rather than the amount to which the entity might ultimately be willing to settle for in a negotiation. Consequently, the boards clarified their intention about what a ‘reasonable profit margin’ is intended to represent in paragraph B9 of IFRS 15.

BC145 In addition, the boards clarified that an entity need not have a present unconditional right to payment but, instead, it must have an enforceable right to demand and/or retain payment for performance completed to date if the customer were to terminate the contract without cause before completion. For example, consider a consulting contract in which the consulting entity agrees to provide a report at the end of the contract for a fixed amount that is conditional on providing that report. If the entity were performing under that contract, it would have a right to payment for performance completed to date if the terms of the contract (or other law) require the customer to compensate the entity for its work completed to date if the customer terminates the contract without cause before completion. The boards clarified this notion because the contractual payment terms in the contract might not always align with the entity’s enforceable rights to payment for performance completed to date.

BC146 A few respondents asked whether a 100 per cent non-refundable upfront payment would meet the ‘right to payment for performance completed to date’ criterion (i.e. because a 100 per cent payment would at least compensate the entity for work completed to date throughout the contract). The boards decided that that type of payment would meet that criterion if the entity’s right to retain
(and not refund) that payment would be enforceable if the customer terminated the contract. Furthermore, the boards noted that the right to payment should be enforceable; otherwise, it is questionable whether the entity actually has a right to payment. Consequently, the boards included the factors in paragraph B12 of IFRS 15 to help an entity determine whether the right to payment would be enforceable.

The boards also decided to clarify that an entity could have an enforceable right to payment in some cases in which a customer might not have a right to terminate the contract or might have a right to terminate the contract only at specified times. This would be the case if the contract or other laws in the jurisdiction require the entity and the customer to complete their respective obligations (often referred to as specific performance).

**Right to payment as a separate revenue recognition criterion**

The boards considered but rejected specifying a right to payment as a more overarching criterion in determining when revenue is recognised, for the following reasons:

(a) an entity must have a contract to recognise revenue in accordance with IFRS 15 and a component of a contract is a right to payment.

(b) the core revenue recognition principle is about determining whether goods or services have been transferred to a customer, not whether the entity has a right to payment (although it is an important part of determining whether a contract exists—see paragraphs BC31–BC46). Including a right to payment as an overarching criterion for determining when a performance obligation is satisfied could have potentially overridden that revenue recognition principle.

(c) a right to payment does not necessarily indicate a transfer of goods or services (for example, in some contracts, customers are required to make non-refundable upfront payments and do not receive any goods or services in exchange). In cases in which the customer clearly receives benefits as the entity performs, as in many service contracts, the possibility that the entity will ultimately not retain the payment for its performance is addressed in the measurement of revenue. For example, in some service contracts in which the customer simultaneously receives and consumes benefits as the entity performs, the customer may be able to terminate the contract and receive a full refund of any consideration paid. The boards decided that in those cases, because the entity is transferring services to the customer, it should recognise revenue subject to an assessment of whether it should constrain the amount of the transaction price to which it is entitled (see paragraphs BC203–BC223).

**Agreements for the construction of real estate**

In developing the requirements for assessing when goods or services transfer to the customer, the boards considered the diversity in practice from applying previous revenue recognition requirements in IFRS that were specific to the construction of real estate. That diversity in practice resulted from the difficulty
in determining when control of real estate transferred to the customer over time by applying the previous IFRS revenue recognition criteria to complex contracts with different facts and circumstances.

BC150 The boards envisage that the diversity in practice should be reduced by the requirements in paragraphs 35–37 of IFRS 15, which provide specific requirements for determining when goods or services transfer over time. However, the boards observe that the pattern of transfer may be different for different real estate contracts because it will depend on the relevant facts and circumstances of each contract. For example, some real estate contracts may result in an asset that cannot (under the terms of the contract) be readily directed to another customer (ie the entity’s performance does not create an asset with an alternative use to the entity), and the contracts require the customer to pay for performance completed to date (thus meeting the criterion in paragraph 35(c) of IFRS 15). However, other real estate contracts that create an asset with no alternative use to the entity may not require the customer to pay for performance completed to date. Therefore, an entity would reach a different conclusion on the pattern of transfer for those contracts.

BC151 Some respondents applying IFRS in the residential real estate industry supported the addition of the criteria for determining whether a performance obligation is satisfied over time, because they reasoned it would assist them in assessing whether revenue could be recognised over time as construction of residential units in a multi-unit real estate development occurs. Other respondents in this industry explained that although they were able to conclude that their performance does not create an asset with an alternative use, they were unable to meet the ‘right to payment for performance completed to date’ criterion. This would mean that they would be able to recognise revenue only at the point in time when each unit transfers to the customer (often only after construction is complete and the customer has physical possession), which they stated would be an inappropriate depiction of their performance.

BC152 However, the boards concluded that if either of the criteria in paragraph 35(c) of IFRS 15 is not met, recognising revenue over time would not faithfully depict the entity’s performance and the entity’s and the customer’s respective rights and obligations in the contract. Furthermore, the boards decided that clarifying the ‘no alternative use and right to payment for performance completed to date’ criterion would ensure greater certainty and consistency in recognising revenue for multi-unit residential real estate developments.

**Performance obligations satisfied at a point in time (paragraph 38)**

BC153 The boards decided that all performance obligations that do not meet the criteria for being satisfied over time should be accounted for as performance obligations satisfied at a point in time. For performance obligations satisfied at a point in time, the performance obligation is satisfied at the point in time when control of the goods or services transfers to the customer. The boards included indicators of the transfer of control in paragraph 38 of IFRS 15.

BC154 Many respondents commented that the indicators were useful for contracts for the sales of goods to assist an entity in determining when it has transferred
control of an asset (whether tangible or intangible). The boards included the indicator ‘the customer has the significant risks and rewards of ownership of the asset’ because of comments from respondents who disagreed with the boards’ initial proposal to eliminate considerations of the ‘risks and rewards of ownership’ from the recognition of revenue. Respondents observed that risks and rewards can be a helpful factor to consider when determining the transfer of control, as highlighted by the IASB in IFRS 10 Consolidated Financial Statements, and can often be a consequence of controlling an asset. The boards decided that adding risks and rewards as an indicator provides additional guidance, but does not change the principle of determining the transfer of goods or services on the basis of the transfer of control.

Some respondents questioned whether all of the indicators would need to be present for an entity to conclude that it had transferred control of a good or service. Some respondents also questioned what an entity should do if some but not all of the indicators were present. In their redeliberations, the boards emphasised that the indicators in paragraph 38 of IFRS 15 are not a list of conditions that must be met before an entity can conclude that control of a good or service has transferred to a customer. Instead, the indicators are a list of factors that are often present if a customer has control of an asset and that list is provided to assist entities in applying the principle of control in paragraph 31 of IFRS 15.

The boards considered including an indicator that the ‘design or function of the good or service is customer-specific’. However, the boards decided not to include this indicator in IFRS 15, because it would apply mainly to service contracts (for example, construction-type contracts) and it would be unnecessary in the light of the requirements for determining when performance obligations are satisfied over time. As described in paragraphs BC134–BC141, the notion of customer-specific design or function has been developed into the criterion of ‘an asset with no alternative use to the entity’.

Respondents also suggested additional indicators such as the entity’s lack of continuing involvement in the good or service (for example, a call option on a delivered good). The boards included application guidance to help an entity assess the transfer of control in circumstances in which put or call options exist in a contract with a customer (see paragraphs BC422–BC433).

Measuring progress towards complete satisfaction of a performance obligation (paragraphs 39–45 and B14–B19)

The boards decided that when an entity determines that a performance obligation is satisfied over time, it should determine how much revenue to recognise in each reporting period by measuring its progress towards complete satisfaction of the performance obligation.

There are various methods that an entity might use to measure its progress towards complete satisfaction of a performance obligation. Because of the breadth of the scope of IFRS 15, the boards decided that it would not be feasible to consider all possible methods and prescribe when an entity should use each method. Accordingly, an entity should use judgement when selecting an appropriate method of measuring progress towards complete satisfaction of a
performance obligation. That does not mean that an entity has a ‘free choice’. The requirements state that an entity should select a method of measuring progress that is consistent with the clearly stated objective of depicting the entity’s performance—that is, the satisfaction of an entity’s performance obligation—in transferring control of goods or services to the customer.

BC160 To meet that objective of depicting the entity’s performance, an entity would need to consider the nature of the promised goods or services and the nature of the entity’s performance. For example, in a typical health club contract, the entity’s promise is to stand ready for a period of time (ie by making the health club available), rather than providing a service only when the customer requires it. In this case, the customer benefits from the entity’s service of making the health club available. This is evidenced by the fact that the extent to which the customer uses the health club does not, in itself, affect the amount of the remaining goods or services to which the customer is entitled. In addition, the customer is obliged to pay the consideration regardless of whether it uses the health club. Consequently, in those cases, the entity would need to select a measure of progress based on its service of making goods or services available, instead of when the customer uses the goods or services made available to them.

BC161 The boards decided that an entity should apply the selected method for measuring progress consistently for a particular performance obligation and also across contracts that have performance obligations with similar characteristics. An entity should not use different methods to measure its performance in satisfying the same or similar performance obligations, otherwise that entity’s revenue would not be comparable in different reporting periods. The boards also noted that if an entity were permitted to apply more than one method to measure its performance in fulfilling a performance obligation, it would effectively bypass the requirements for identifying performance obligations.

BC162 Although the boards did not consider all possible methods and prescribe when an entity should use each method, they observed that there are broadly two methods that the entity might consider when determining the method of measuring progress towards complete satisfaction of the performance obligation—that is, output and input methods. Requirements for the application of those methods are included in the application guidance (see paragraphs B14–B19 of IFRS 15).

Output methods
[Refer: Appendix B paragraphs B15–B17]

BC163 Output methods recognise revenue on the basis of direct measurements of the value to the customer of the goods or services transferred to date (for example, surveys of performance completed to date, appraisals of results achieved, milestones reached, time elapsed and units delivered or units produced). When applying an output method, ‘value to the customer’ refers to an objective measure of the entity’s performance in the contract. However, value to the customer is not intended to be assessed by reference to the market prices or stand-alone selling prices of the individual goods or services promised in the contract, nor is it intended to refer to the value that the customer perceives to be embodied in the goods or services.
The boards decided that, conceptually, an output measure is the most faithful depiction of an entity’s performance because it directly measures the value of the goods or services transferred to the customer. However, the boards observed that it would be appropriate for an entity to use an input method if that method would be less costly and would provide a reasonable proxy for measuring progress.

In the redeliberations, some respondents, particularly those in the contract manufacturing industry, requested the boards to provide more guidance on when units-of-delivery or units-of-production methods would be appropriate. Those respondents observed that such methods appear to be output methods and, therefore, questioned whether they would always provide the most appropriate depiction of an entity’s performance. The boards observed that such methods may be appropriate in some cases; however, they may not always result in the best depiction of an entity’s performance if the performance obligation is satisfied over time. This is because a units-of-delivery or a units-of-production method ignores the work in progress that belongs to the customer. When that work in progress is material to either the contract or the financial statements as a whole, the boards observed that using a units-of-delivery or a units-of-production method would distort the entity’s performance because it would not recognise revenue for the assets that are created before delivery or before production is complete but are controlled by the customer.

The boards also observed that a units-of-delivery or a units-of-production method may not be appropriate if the contract provides both design and production services because, in this case, each item produced or delivered may not transfer an equal amount of value to the customer. However, a units-of-delivery method may be an appropriate method for measuring progress for a long-term manufacturing contract of standard items that individually transfer an equal amount of value to the customer on delivery. Thus, the boards clarified that in selecting an output method for measuring progress and determining whether a units-of-delivery or a units-of-production method is appropriate, an entity should consider its facts and circumstances and select the method that depicts the entity’s performance and the transfer of control of the goods or services to the customer.

The boards also decided that, in some circumstances, as a practical expedient, another appropriate output method is to recognise revenue at the amount of consideration to which an entity has a right to invoice. This method is appropriate if the amount of consideration that the entity has a right to invoice corresponds directly with the value to the customer of each incremental good or service that the entity transfers to the customer (ie the entity’s performance completed to date). This may occur, for example, in a services contract in which an entity invoices a fixed amount for each hour of service provided. [Refer also: Appendix B paragraph B16]

**Input methods**

[Refer: Appendix B paragraphs B18 and B19]

Input methods recognise revenue on the basis of an entity’s efforts or inputs towards satisfying a performance obligation (for example, resources consumed,
labour hours expended, costs incurred, time elapsed or machine hours used) relative to the total expected inputs to satisfy the performance obligation.

In some contracts, an entity promises to transfer both goods and services to a customer, but the customer takes control of the goods, which represent a significant part of the performance obligation, at a different time from that of the services (for example, the customer obtains control of the goods before they are installed). If those goods and services are not distinct, then the entity would have a single performance obligation. Because there is diversity in practice about how to apply an input method to measure progress in such situations, the boards decided to provide additional guidance related to uninstalled materials.

Uninstalled materials

The boards decided to clarify that the adjustment to the input method for uninstalled materials is intended to ensure that the input method meets the objective of measuring progress towards complete satisfaction of a performance obligation, as described in paragraph 39 of IFRS 15—that is, to depict an entity’s performance.

The boards observed that if a customer obtains control of the goods before they are installed by an entity, then it would be inappropriate for the entity to continue to recognise the goods as inventory. Instead, the entity should recognise revenue for the transferred goods in accordance with the core principle of IFRS 15. The boards also observed that if the entity applies a cost-to-cost method of measuring progress (ie costs incurred compared with total expected costs), the entity might (in the absence of clear requirements) include the cost of the goods in the cost-to-cost calculation and, therefore, recognise a contract-wide profit margin for the transfer of the goods. The boards noted that recognising a contract-wide profit margin before the goods are installed could overstate the measure of the entity’s performance and, therefore, revenue would be overstated. Alternatively, requiring an entity to estimate a profit margin that is different from the contract-wide profit margin could be complex and could effectively create a performance obligation for goods that are not distinct (thus bypassing the requirements for identifying performance obligations). Therefore, the boards decided that, in specified circumstances, an entity should recognise revenue for the transfer of the goods but only in an amount equal to the cost of those goods. In those circumstances, an entity should also exclude the costs of the goods from the cost-to-cost calculation to be consistent with the cost-to-cost methodology.

The boards noted that the adjustment to the cost-to-cost measure of progress for uninstalled materials is generally intended to apply to a subset of goods in a construction-type contract—that is, only to those goods that have a significant cost relative to the contract and only if the entity is essentially providing a simple procurement service to the customer. For goods that meet the conditions in paragraph B19(b) of IFRS 15, recognising revenue to the extent of the costs of those goods ensures that the depiction of the entity’s profit (or margin) in the contract is similar to the profit (or margin) that the entity would recognise if the customer had supplied those goods themselves for the entity to install or use in the construction activity.
Some respondents disagreed with the requirements that an entity recognise a profit margin of zero on the transfer of the uninstalled materials to the customer. In their view, recognising different profit margins for different parts of a single performance obligation is inconsistent with the principle of identifying performance obligations. Other respondents disagreed with recognising revenue for uninstalled materials at a zero profit margin because it might not properly depict an entity’s rights under the contract (for example, if the entity was entitled on termination of the contract to a payment at an amount that reflects the contract-wide margin for all work performed, including the transfer of uninstalled materials to the customer).

The boards considered those arguments but decided that the adjustment to the input method specified in paragraph B19(b) of IFRS 15 will ensure that the input method meets the objective of measuring progress to depict an entity's performance. The boards disagreed with the concern raised by some respondents that paragraph B19(b) of IFRS 15 is inconsistent with the principle of identifying performance obligations. Although the outcome of applying paragraph B19(b) of IFRS 15 is that some goods or services that are part of a single performance obligation attract a margin, while any uninstalled materials attract only a zero margin, that difference arises only as a consequence of the need to adjust the cost-to-cost calculation so that the input method faithfully depicts the entity’s performance in the contract.

To be consistent with their decision on uninstalled materials, the boards also clarified that if an entity selects an input method such as cost-to-cost to measure its progress, the entity should adjust the measure of progress if including some of those costs incurred (for example, inefficiencies and wasted materials) would distort the entity’s performance in the contract.

Inefficiencies and wasted materials

Paragraph B19 of IFRS 15 acknowledges that a shortcoming of input methods is that there may not be a direct relationship between an entity's inputs and the transfer of control of goods or services to a customer. This would be the case if the cost-to-cost method includes costs attributable to wasted materials or other inefficiencies that do not contribute to the satisfaction of a performance obligation. Consequently, an entity should exclude the effects of any inputs that do not depict the transfer of control of goods or services to the customer (for example, the costs of wasted materials, labour or other resources to fulfil the contract that were not reflected in the price of the contract). In that regard, the requirements in paragraph B19 of IFRS 15 can be viewed as a reminder that a mechanical application of the cost-to-cost method might not always provide a faithful depiction of the entity’s performance.

As part of their redeliberations, the boards considered whether more guidance should be provided on the notions of inefficiency and wasted materials. For instance, some respondents asked if the assessment should focus on entity-specific inefficiencies or market-driven inefficiencies, and some requested a clear distinction between the accounting for normal expected wasted materials and the accounting for abnormal wasted materials.
The boards acknowledged the concerns but decided that it would not be feasible to develop additional guidance that would clearly and consistently identify the costs of inefficiencies and wasted materials that should be excluded from a cost-to-cost measure of progress. Instead, the boards decided to emphasise that the objective of measuring progress towards complete satisfaction of the performance obligation is to depict an entity’s performance in the contract and therefore a cost-to-cost calculation may require adjustment if some of the costs incurred do not contribute to the progress in the contract.

**Reasonable measures of progress**

The boards clarified that when selecting a method to measure progress and, thus, determining when to recognise revenue, an entity should recognise revenue for its performance only if it can reasonably measure its progress towards complete satisfaction of the performance obligation. Some asked whether an entity’s inability to measure progress would mean that costs would also be deferred. However, the boards observed that unless the entity can recognise an asset from the costs to fulfil a contract in accordance with paragraph 95 of IFRS 15, those costs would not represent an asset of the entity and, therefore, should be recognised as expenses as they are incurred. [Refer: paragraph 44]

The boards also concluded that in cases in which an entity cannot reasonably measure its progress towards complete satisfaction of a performance obligation, but nevertheless expects eventually to recover the costs incurred in satisfying the performance obligation, the entity should recognise at least some amount of revenue to reflect the fact that it is making progress in satisfying the performance obligation. Consequently, the boards decided that in those cases, an entity should recognise revenue for the satisfaction of the performance obligation only to the extent of the costs incurred. (That method is consistent with previous revenue recognition requirements in both IFRS and US GAAP for measuring progress.) However, the boards also decided that an entity should stop using that method when it can reasonably measure its progress towards complete satisfaction of the performance obligation. [Refer: paragraph 45]

**Measurement of revenue (paragraphs 46–90)**

The boards decided that an entity should measure revenue based on an allocated transaction price approach. Using that approach, an entity allocates the transaction price to each performance obligation at an amount that depicts the amount of consideration to which the entity expects to be entitled in exchange for satisfying each performance obligation. That allocation determines the amount of revenue that an entity recognises when (or as) it satisfies each performance obligation. Most respondents supported the allocated transaction price approach.

The boards considered, but rejected, an alternative measurement approach, which would have been to measure the remaining performance obligations directly at the end of each reporting period. The boards observed that this alternative would have made accounting for the contract more complex. In addition, the boards expected that in many cases it would have provided users of
financial statements with little additional information, either because the values of goods or services promised are not inherently volatile or because the effect of any volatility that might exist is limited when an entity transfers the goods or services to the customer over a relatively short time. Paragraphs BC25–BC27 include additional discussion on rejected measurement approaches.

The allocated transaction price approach generally requires an entity to follow three main steps to determine the amount of revenue that can be recognised for satisfied performance obligations. Those steps are as follows:

(a) determine the transaction price for the contract;
(b) allocate the transaction price to performance obligations; and
(c) recognise revenue at the amount allocated to the satisfied performance obligation.

Determining the transaction price (paragraphs 47–72)

Determining the transaction price is an important step in the revenue recognition model because the transaction price is the amount that an entity allocates to the performance obligations in a contract and ultimately recognises as revenue.

The boards decided to define the transaction price as the amount of consideration to which an entity expects to be entitled in exchange for transferring goods or services. Consequently, the objective in determining the transaction price at the end of each reporting period is to predict the total amount of consideration to which the entity will be entitled from the contract. In developing IFRS 15, the boards decided that the transaction price should not be adjusted for the effects of the customer’s credit risk (see paragraphs BC259–BC265) unless the contract includes a significant financing component (see paragraphs BC229–BC247).

The boards clarified that the transaction price should include only amounts (including variable amounts) to which the entity has rights under the present contract. For example, the transaction price does not include estimates of consideration from the future exercise of options for additional goods or services or from future change orders. Until the customer exercises the option or agrees to the change order, the entity does not have a right to consideration.

The boards also clarified that the amounts to which the entity has rights under the present contract can be paid by any party (ie not only by the customer). For example, in the healthcare industry, an entity may determine the transaction price based on amounts to which it will be entitled to payment from the patient, insurance companies and/or governmental organisations. This may also occur in other industries in which an entity receives a payment from a manufacturer as a result of the manufacturer issuing coupons or rebates directly to the entity’s customer. However, it would not include amounts collected on behalf of another party such as some sales taxes and value added taxes in some jurisdictions.
Determining the transaction price when a customer promises to pay a fixed amount of cash consideration (i.e., an amount that will not vary) will be simple. However, determining the transaction price may be more difficult in the following cases:

(a) the promised amount of consideration is variable (see paragraphs BC189–BC202), which will also require an entity to consider whether it should constrain the estimated amount of consideration to be included in the transaction price (see paragraphs BC203–BC223);

(b) the contract has a significant financing component (see paragraphs BC229–BC247);

(c) the promised amount of consideration is in a form other than cash (see paragraphs BC248–BC254); and

(d) there is consideration payable to the customer by the entity (see paragraphs BC255–BC258).

Variable consideration (paragraphs 50–59)

The boards noted that in contracts with customers in which the promised consideration is variable, an entity needs to estimate the amount of consideration to which the entity expects to be entitled. Consequently, the boards decided to provide requirements that address:

(a) identifying when variable consideration is present in a contract with a customer (see paragraphs BC190–BC194);

(b) the methods for estimating variable consideration (see paragraphs BC195–BC202);

(c) when those estimates of variable consideration should be constrained and, thus, not included in the transaction price (see paragraphs BC203–BC223); and

(d) how to account for subsequent changes in the transaction price (see paragraphs BC224–BC228).

Identifying variable consideration

The boards noted that variable consideration can arise in any circumstance in which the consideration to which the entity will be entitled under the contract may vary. The examples in paragraph 51 of IFRS 15 include common types of variable consideration that may occur in a contract with a customer.

The boards observed that consideration can be variable even in cases in which the stated price in the contract is fixed. This is because the entity may be entitled to the consideration only upon the occurrence or non-occurrence of a future event. Consider, for example, a fixed-price service contract in which the customer pays upfront and the terms of the contract provide the customer with a full refund of the amount paid if the customer is dissatisfied with the service at any time. In those cases, the consideration is variable because the entity might be entitled to all of the consideration or none of the consideration if the customer exercises its right to a refund.
The contract will often specify the terms that result in the consideration being classified as variable. However, in some cases the promised consideration may be variable because the facts and circumstances indicate that the entity may accept a lower price than that stated in the contract (ie the contract contains an implicit price concession). The boards observed that an entity’s customary business practices, published policies or specific statements may provide evidence that the entity is willing to accept a lower price in exchange for the promised goods and services. For example, an entity might grant a price concession to a customer for goods that were previously sold to that customer to enable the customer to discount the goods and, therefore, more easily sell them to a third party. The boards noted that in many cases, price concessions are likely to be granted to enhance a customer relationship to encourage future sales to that customer.

The boards decided that an entity should also consider all facts and circumstances to determine whether the entity will accept a lower amount of consideration than the price stated in the contract. For example, an entity might enter into a contract with a new customer with a strategy to develop the customer relationship. In that case, although there may not be past evidence that the entity will provide a price concession, there may be other factors present that result in the entity concluding that it will accept a lower price than that stated in the contract.

The boards observed that in some cases it may be difficult to determine whether the entity has implicitly offered a price concession or whether the entity has chosen to accept the risk of default by the customer of the contractually agreed-upon consideration (ie customer credit risk). The boards noted that an entity should use judgement and consider all relevant facts and circumstances in making that determination. The boards observed that this judgement was being applied under previous revenue recognition requirements. Consequently, the boards decided not to develop detailed requirements for differentiating between a price concession and impairment losses.

The method for estimating the variable consideration

The boards decided to specify that an entity should estimate variable consideration using either the expected value or the most likely amount, depending on which method the entity expects will better predict the amount of consideration to which the entity will be entitled (see paragraph 53 of IFRS 15). The boards noted that this is not intended to be a ‘free choice’; an entity needs to consider which method it expects to better predict the amount of consideration to which it will be entitled and apply that method consistently for similar types of contracts.

The boards concluded on the methods to estimate the transaction price in response to the feedback on the 2010 Exposure Draft. That exposure draft proposed that when the consideration in a contract is variable, an entity should measure the transaction price (at its expected value) using only a probability-weighted method. A probability-weighted method reflects the full range of possible consideration amounts, weighted by their respective...
probabilities. Many respondents to the 2010 Exposure Draft disagreed with measuring the transaction price using a probability-weighted method because they reasoned it would:

(a) add complexity and be costly to apply; and

(b) impede the reporting of meaningful results in all circumstances because, for example, it could result in an entity determining the transaction price at an amount of consideration that the entity could never obtain under the contract.

Some respondents suggested that the boards not specify a measurement model and, instead, require that the transaction price be determined using management’s best estimate. Many noted that this would provide management with the flexibility to estimate on the basis of its experience and available information, without the documentation that would be required when a measurement model is specified.

In their redeliberations, the boards reaffirmed their decision to specify an objective and an appropriate measurement method for estimating the transaction price. This is because specifying an objective and an appropriate measurement method would provide the necessary framework to ensure rigour in the process of estimation. Furthermore, without such a framework, the measurement of revenue might not be understandable to users of financial statements and might lack comparability between entities.

However, in their redeliberations, the boards reconsidered what the appropriate measurement method(s) should be. They noted that a probability-weighted method reflects all of the uncertainties existing in the transaction price at the end of the reporting period. Therefore, it best reflects the conditions that are present at the end of each reporting period. For instance, it reflects the possibility of receiving a greater amount of consideration as well as the risk of receiving a lesser amount. However, the boards observed that users of financial statements are most interested in knowing the total amount of consideration that will ultimately be realised from the contract. Consequently, the boards decided that for the estimate of the transaction price to be meaningful at the end of each reporting period, it should be an amount that the entity expects to better predict the amount of consideration to which it will be entitled (the boards decided to address the issue of credit risk separately—see paragraphs BC259–BC265).

The boards observed that in some cases, a probability-weighted estimate (i.e., an expected value) predicts the amount of consideration to which an entity will be entitled. For example, that is likely to be the case if the entity has a large number of contracts with similar characteristics. However, the boards agreed with respondents that an expected value may not always faithfully predict the consideration to which an entity will be entitled. For example, if the entity is certain to receive one of only two possible consideration amounts in a single contract, the expected value would not be a possible outcome in accordance with the contract and, therefore, might not be relevant in predicting the amount of consideration to which the entity will be entitled. The boards decided that in those cases, another method—the most likely amount method—is
necessary to estimate the transaction price. This is because the most likely amount method identifies the individual amount of consideration in the range of possible consideration amounts that is more likely to occur than any other individual outcome.

BC201 Theoretically, although an entity using the most likely amount method must consider all possible outcomes to identify the most likely one, in practice, there is no need to quantify the less probable outcomes. Similarly, in practice, estimating the expected value using a probability-weighted method does not require an entity to consider all possible outcomes using complex models and techniques, even if an entity has extensive data and can identify many outcomes. In many cases, a limited number of discrete outcomes and probabilities can often provide a reasonable estimate of the distribution of possible outcomes. Therefore, the boards decided that neither of the two approaches should be too costly or complex to apply.

BC202 The boards also decided that, to provide better information to users, an entity should apply one method consistently throughout the contract when estimating the effect of an uncertainty on the amount of variable consideration to which the entity expects to be entitled. However, the boards observed that this would not mean an entity would need to use one method to measure each uncertainty in a single contract. Instead, an entity may use different methods for different uncertainties.

Constraining estimates of variable consideration

BC203 The boards decided that to provide useful information to users of financial statements, some estimates of variable consideration should not be included in the transaction price. This would be the case if the estimate of variable consideration (and consequently the amount of revenue recognised) is too uncertain and, therefore, may not faithfully depict the consideration to which the entity will be entitled in exchange for the goods or services transferred to the customer. In that case, the boards decided that an entity should constrain the estimate of variable consideration to be included in the transaction price.

BC204 Many respondents agreed that it was necessary to include some form of constraint on the recognition of revenue that results from variable consideration because a significant portion of errors in financial statements under previous revenue recognition requirements have related to the overstatement or premature recognition of revenue. However, the boards noted that their intention was not to eliminate the use of estimates, which are commonplace and necessary in financial reporting, but instead to ensure that those estimates are robust and result in useful information. This is because revenue is an important metric and users of financial statements explained that it is critical that those estimates of variable consideration be included in revenue only when there is a high degree of confidence that revenue will not be reversed in a subsequent reporting period.

BC205 In developing the requirements for constraining estimates of variable consideration, the boards considered the following:

(a) the objective of constraining estimates of variable consideration and specifying a level of confidence (see paragraphs BC206–BC213);
(b) application of the requirements for constraining estimates of variable consideration and sales-based and usage-based royalties on licences of intellectual property (see paragraphs BC214–BC219); and

(c) whether the requirements for constraining estimates of variable consideration should be included in the determination of the transaction price (Step 3 of the revenue recognition model) or the determination of the cumulative amount of revenue recognised when a performance obligation is satisfied (Step 5 of the revenue recognition model) (see paragraphs BC220–BC223).

The objective of constraining estimates of variable consideration and specifying a level of confidence

BC206 In their redeliberations, the boards decided that it would be helpful to clarify the objective for constraining estimates of variable consideration. In making their decision, the boards considered the feedback received from users of financial statements. The majority of users of financial statements that were consulted indicated that the most relevant measure for revenue in a reporting period would be one that will not result in a significant reversal in a subsequent period. This is because an amount that would not reverse in the future would help users of financial statements better predict future revenues of an entity. Therefore, the boards decided that the focus for constraining revenue should be on possible downward adjustments (ie revenue reversals), rather than on all revenue adjustments (ie both downward and upward adjustments). Specifically, the boards decided that an entity should include some or all of an estimate of variable consideration in the transaction price only to the extent it is highly probable that a significant revenue reversal will not occur.

BC207 The boards acknowledge that the requirement to constrain estimates of variable consideration and the objective they have defined creates a tension with the notion of neutrality in the boards’ respective conceptual frameworks. This is because the boards’ decision introduces a downward bias into estimates that will be included in the transaction price. However, the boards decided that this bias was reasonable because users of financial statements indicated that revenue is more relevant if it is not expected to be subject to significant future reversals.

BC208 In the redeliberations, preparers and auditors indicated that meeting the objective of constraining estimates of variable consideration would be difficult if no level of confidence was specified, for instance, if the boards merely specified that an entity should include variable consideration to the extent that it expects that doing so would not result in a significant revenue reversal. Many also observed that omitting a level of confidence from the objective could result in diversity in practice if entities interpreted the implicit confidence level in different ways (for example, some might interpret the implicit confidence level as virtually certain while others might presume it to mean more likely than not).

BC209 Consequently, the boards decided that specifying a level of confidence would provide clarity and thus ensure more consistent application of the requirements to constrain estimates of variable consideration. In determining the appropriate level of confidence, the boards considered whether they could use the proposal in the 2011 Exposure Draft that constrained revenue to the amount to which an
entity would be reasonably assured to be entitled. However, many respondents to the 2011 Exposure Draft were unsure about what the boards intended by using the term ‘reasonably assured’. Those respondents observed that the term is used elsewhere in IFRS, US GAAP and auditing requirements and further noted that its meaning is often interpreted differently in those contexts.

BC210 The boards also considered using terminology that has not previously been used in IFRS and US GAAP. However, the boards decided that any new term that was used might result in diversity in practice, because entities might interpret the new term in different ways. Consequently, the boards decided that the most appropriate level of confidence would be ‘highly probable’ for IFRS and ‘probable’ for US GAAP as a result of the usage of those terms in existing requirements.

BC211 The boards observed that the term ‘probable’ is widely used and understood in practice in the United States and is defined in US GAAP as ‘the future event or events are likely to occur’ (Topic 450). In contrast, the term ‘probable’ is defined in IFRS as ‘more likely than not’ (IFRS 5 Non-current Assets Held for Sale and Discontinued Operations and IAS 37 Provisions, Contingent Liabilities and Contingent Assets). Therefore, to achieve the same meaning in IFRS as US GAAP, the boards decided to use the term ‘highly probable’ for IFRS purposes and ‘probable’ for US GAAP purposes. The boards noted that this is consistent with the approach that the IASB adopted in developing IFRS 5, for which the IASB used the term ‘highly probable’ to achieve the same meaning as ‘probable’ in US GAAP (see paragraph BC81 of IFRS 5).

BC212 The boards observed that the analysis an entity would undertake to determine if its estimate met the required level of confidence would still be largely qualitative. Specifically, that analysis would require the entity to use judgement and consider the factors in paragraph 57 of IFRS 15 to assess whether it was highly probable that a significant revenue reversal would not occur. In other words, the boards did not expect that an entity would need to prepare a quantitative analysis each time it assessed the likelihood of whether a significant revenue reversal could occur. Therefore, the boards concluded that including a confidence level would not result in application of the requirements that is too costly or complex.

BC213 The factors in paragraph 57 of IFRS 15 were derived in part from previous requirements in US GAAP on estimating sales returns. Those indicators were also proposed in the 2010 and the 2011 Exposure Drafts and respondents generally agreed that the indicators were relevant and helpful. In their redeliberations, the boards also decided to add an indicator in paragraph 57(d) of IFRS 15 to address the circumstances in which there is no explicit requirement to adjust the price stated in the contract, but the entity has a past practice of offering a broad range of price concessions (or similar types of price adjustments). This is because the boards observed that a practice of offering a broad range of price concessions would increase the probability that a significant revenue reversal would occur if the entity included the contractual amount of consideration in the transaction price.
Application of the requirements to constrain estimates of variable consideration

BC214 The requirements for constraining estimates of variable consideration first require an entity to estimate the consideration to which the entity will be entitled (see paragraph 53 of IFRS 15). The entity then assesses whether the objective of the requirements for constraining estimates of variable consideration can be met—that is by determining whether it is highly probable that a significant revenue reversal will not occur when the uncertainty associated with the variable consideration is subsequently resolved. If the entity determines that it is highly probable that the inclusion of its estimate will not result in a significant revenue reversal, that amount is included in the transaction price.

BC215 Although some respondents explained that they reasoned that these requirements would inappropriately require a two-step process, the boards observed that an entity would not be required to strictly follow those two steps if the entity’s process for estimating variable consideration already incorporates the principles on which the requirements for constraining estimates of variable consideration are based. For example, an entity might estimate revenue from sales of goods with a right of return. In that case, the entity might not practically need to estimate the expected revenue and then apply the constraint requirements to that estimate, if the entity’s calculation of the estimated revenue incorporates the entity’s expectations of returns at a level at which it is highly probable that the cumulative amount of revenue recognised would not result in a significant revenue reversal.

BC216 The requirements for constraining estimates of variable consideration require an entity to assess whether a significant revenue reversal would not occur for the amount of cumulative revenue recognised for a satisfied (or partially satisfied) performance obligation. This is because the boards did not intend for an entity to inappropriately recognise revenue by offsetting the risk of a future revenue reversal for a satisfied (or partially satisfied) performance obligation against expected revenue from future performance.

BC217 The requirements for constraining estimates of variable consideration also require an entity to assess the magnitude of a significant revenue reversal for both variable consideration and fixed consideration. For example, if the consideration for a single performance obligation included a fixed amount and a variable amount, the entity would assess the magnitude of a possible revenue reversal of the variable amount relative to the total consideration (ie variable and fixed consideration). This is because the objective of constraining estimates of variable consideration is focused on a possible revenue reversal of the amount of cumulative revenue recognised for a performance obligation, rather than on a reversal of only the variable consideration allocated to that performance obligation.

BC218 The boards noted that in some cases, when an entity applies the requirements for constraining estimates of variable consideration, the entity might determine that it should not include the entire estimate of the variable consideration in the transaction price when it is not highly probable that doing so would not result in a significant revenue reversal. However, the entity might determine
that it is highly probable that including some of the estimate of the variable consideration in the transaction price would not result in a significant revenue reversal. The boards decided that, in such cases, the entity should include that amount in the estimate of the transaction price. Respondents to both the 2010 and the 2011 Exposure Drafts supported including some of the variable consideration in the transaction price (and therefore recognising that portion as revenue when the entity satisfies the related performance obligation) if including that amount would meet the objective of the requirements for constraining estimates of variable consideration.

However, the boards decided that for a licence of intellectual property for which the consideration is based on the customer’s subsequent sales or usage, an entity should not recognise any revenue for the uncertain amounts until the uncertainty is resolved (ie when the customer’s subsequent sales or usage occurs). The boards included these requirements because both users and preparers of financial statements generally indicated that if an entity recognised a minimum amount of revenue for those contracts it would not provide relevant information (see paragraphs BC419–BC421). [Refer also: paragraphs 58 and B63]

Constraining the estimate of the transaction price (Step 3) or constraining the cumulative amount of revenue that is recognised (Step 5)

During the development of the requirements for constraining estimates of variable consideration, the boards considered where in the revenue recognition model it would be most appropriate to apply those requirements.

Some respondents suggested that if the objective is to constrain the measurement of revenue, it might be more appropriate to constrain the transaction price (ie include a constraint at Step 3). In contrast, if the objective is to limit the amount of revenue recognised, it might be more appropriate to constrain the cumulative amount of revenue recognised (ie include a constraint at Step 5). However, the boards observed that those are not truly independent objectives because the measurement of revenue determines the amount of revenue recognised. In other words, the requirements for constraining estimates of variable consideration restrict revenue recognition and use measurement uncertainty as the basis for determining if (or how much) revenue should be recognised. The boards noted that applying the requirements for constraining estimates of variable consideration to the transaction price or to the cumulative amount of revenue recognised should have an equal effect on the amount of revenue recognised in a contract.

Consequently, the boards decided that the requirements for constraining estimates of variable consideration should be incorporated into the determination of the transaction price because feedback from respondents indicated that this would be consistent with the way in which management often considers variable consideration.

Respondents in the asset management and hotel management industries questioned whether constraining the transaction price would result in a pattern of revenue recognition that would faithfully depict their performance under the contract. In many of the contracts in those industries, when a portion of the...
variable consideration becomes fixed, it relates only to the performance for the period. The boards observed that the requirements for allocating variable consideration (see paragraphs BC284–BC293) would ensure that the revenue recognised would faithfully depict the performance in such a contract.

**Subsequent changes in the transaction price**

BC224 After contract inception, an entity will revise its expectations about the amount of consideration to which it expects to be entitled as uncertainties are resolved or as new information about remaining uncertainties becomes available. To depict conditions that exist at the end of each reporting period (and changes in conditions during the reporting period), the boards decided that an entity should update its estimate of the transaction price throughout the contract. The boards concluded that reflecting current assessments of the amount of consideration to which the entity expects to be entitled will provide more useful information to users of financial statements than retaining the initial estimates, especially for long-term contracts that are subject to significant changes in conditions during the life of the contract.

BC225 The boards considered whether an entity should do either of the following if the transaction price changes during a contract:

(a) recognise those changes in profit or loss when the changes occur; or
(b) allocate those changes to performance obligations.

BC226 The boards rejected the alternative of recognising the entire amount of a change in the estimate of the transaction price in profit or loss when that change occurs. In the boards’ view, that alternative could have resulted in a pattern of revenue recognition that would not faithfully depict the pattern of the transfer of goods or services. Moreover, recognising revenue immediately (and entirely) for a change in the estimate of the transaction price would have been prone to abuse in practice. The boards considered whether changes in the estimate of the transaction price could be presented as a gain or loss separately from revenue, thus preserving the pattern of revenue recognition. However, the boards rejected that alternative because the total amount of revenue recognised for the contract would not have equalled the amount of consideration to which the entity was entitled under the contract.

BC227 Instead, the boards decided that an entity should allocate a change in the transaction price to all the performance obligations in the contract, subject to the conditions in paragraphs 87–90 of IFRS 15 (see paragraph BC286). This is because the cumulative revenue recognised will then depict the revenue that the entity would have recognised at the end of the subsequent reporting period, if the entity had the information at contract inception. Consequently, the transaction price that is allocated to performance obligations that have already been satisfied should be recognised as revenue (or as a reduction of revenue) immediately.

BC228 The boards noted that in some cases, an entity might make an estimate of the amount of variable consideration to include in the transaction price at the end of a reporting period. However, information relating to the variable consideration might arise between the end of the reporting period and the date
when the financial statements are authorised for issue. The boards decided not to provide guidance on the accounting in these situations because they noted that the accounting for subsequent events is already addressed in IAS 10 Events after the Reporting Period and Topic 855 Subsequent Events.

**The existence of a significant financing component in the contract (paragraphs 60–65)**

BC229 Some contracts with customers include a financing component. The financing component may be explicitly identified in the contract or may be implied by the contractual payment terms of the contract. A contract that has a financing component includes, conceptually, two transactions—one for the sale and one for the financing. The boards decided to require an entity to adjust the promised amount of consideration for the effects of financing components if those financing components are significant, for the following reasons:

(a) not recognising a financing component could misrepresent the revenue of a contract. For example, if a customer pays in arrears, ignoring the financing component of the contract would result in full revenue recognition on the transfer of the good or service, despite the fact that the entity is providing a service of financing to the customer.

(b) in some contracts, entities (or customers) consider the timing of the cash flows in a contract. Consequently, identifying a significant financing component acknowledges an important economic feature of the contract, which is that the contract includes a financing arrangement as well as the transfer of goods or services. A contract in which the customer pays for a good or service when that good or service is transferred to the customer may be significantly different from a contract in which the customer pays before or after the good or service is transferred in order to provide or receive a financing benefit.

BC230 The objective of adjusting the promised amount of consideration for the effects of a significant financing component is to reflect, in the amount of revenue recognised, the ‘cash selling price’ of the underlying good or service at the time that the good or service is transferred. The boards observed that adjusting the promised consideration to obtain the cash selling price may only be required when the timing of payments specified in the contract provides the customer or the entity with a significant benefit of financing the transfer of goods or services to the customer. This is because, in other cases, the timing of payments may be for a purpose other than financing, such as protection for non-performance. This is described further in the following paragraphs.

**Determining whether a contract includes a significant financing component**

BC231 The boards considered whether the requirements for identifying a financing component should be based only on whether payment is due either significantly before, or significantly after, the transfer of goods or services to the customer. However, a number of respondents explained that this might have required an entity to adjust for the time value of money when the parties did not contemplate a financing arrangement as part of the negotiated terms of the contract. Those respondents explained that, in some cases, although there is a
significant period of time between the transfer of the goods or services and the payment, the reason for that timing difference is not related to a financing arrangement between the entity and the customer. The boards agreed with those respondents and clarified their intention by specifying in paragraph 60 of IFRS 15 that an entity should adjust for financing only if the timing of payments specified in the contract provides the customer or the entity with a significant benefit of financing.

The boards also decided to remove the term ‘time value of money’ from the discussion about adjustments for financing components, to reflect their decision that the focus is on whether the payment terms provide the customer or the entity with a significant benefit of financing. This is because the term ‘time value of money’ is a broader economic term that may suggest that it is necessary to adjust the promised amount of consideration in circumstances other than when the cash sales price may differ from the contractual payments. In addition, the boards decided to refine the factors in paragraph 61 of IFRS 15 that an entity should consider when deciding whether a contract includes a significant financing component. Those factors require evaluation of:

(a) the difference, if any, between the amount of promised consideration and the cash selling price of the promised goods or services. If the entity (or another entity) sells the same good or service for a different amount of consideration depending on the timing of the payment terms, this generally provides observable data that the parties are aware that there is a financing component in the contract. This factor is presented as an indicator because in some cases the difference between the cash selling price and the consideration promised by the customer is due to factors other than financing (see paragraph BC233).

(b) the combined effect of (1) the expected length of time between when the entity transfers the promised goods or services to the customer and when the customer pays for those goods or services and (2) the prevailing interest rates in the relevant market. Although the boards decided that the difference in timing between the transfer of goods and services and payment for those goods and services is not determinative, the combined effect of timing and the prevailing interest rates may provide a strong indication that a significant benefit of financing is being provided.

In addition, the boards included criteria in paragraph 62 of IFRS 15 to clarify the circumstances in which a contract does not provide the customer or the entity with a significant benefit of financing:

(a) the customer has paid for the goods or services in advance and, the timing of the transfer of those goods or services is at the discretion of the customer. The boards noted that for some types of goods or services, such as prepaid phone cards and customer loyalty points, the customer will pay for those goods or services in advance and the transfer of those goods or services to the customer is at the customer’s discretion. The boards expected that, in those cases, the purpose of the payment terms is not related to a financing arrangement between the parties. In addition, the boards decided that the costs of requiring an entity to account for the time value of money in these cases would outweigh any perceived benefit.
because the entity would need to continually estimate when the goods or services will transfer to the customer.

(b) a substantial amount of the consideration promised by the customer is variable and that consideration varies on the basis of factors that are outside the control of the customer or the entity. The boards observed that for some arrangements, the primary purpose of the specified timing or amount of the payment terms might not be to provide the customer or the entity with a significant benefit of financing but, instead, to resolve uncertainties that relate to the consideration for the goods or services. For example, in a royalty arrangement, the entity and the customer might not be willing to fix the price and timing of payment because there are significant uncertainties about the goods or services. The primary purpose of those payment terms may be to provide the parties with assurance of the value of the goods or services rather than to provide significant financing to the customer.

(c) the difference between the promised consideration and the cash selling price of the good or service arises for reasons other than the provision of financing to either the customer or the entity. In some circumstances, a payment in advance or in arrears in accordance with the typical payment terms of an industry or jurisdiction may have a primary purpose other than financing. For example, a customer may retain or withhold some consideration that is payable only on successful completion of the contract or on achievement of a specified milestone. Alternatively, the customer might be required to pay some consideration upfront to secure a future supply of limited goods or services. The primary purpose of those payment terms may be to provide the customer with assurance that the entity will complete its obligations satisfactorily under the contract, rather than to provide financing to the customer or the entity respectively.

The boards also observed that for many contracts, an entity will not need to adjust the promised amount of customer consideration because the effects of the financing component will not materially change the amount of revenue that should be recognised in relation to a contract with a customer. In other words, for those contracts, the financing component will not be significant. During their redeliberations, the boards clarified that an entity should consider only the significance of a financing component at a contract level rather than consider whether the financing is material at a portfolio level. The boards decided that it would have been unduly burdensome to require an entity to account for a financing component if the effects of the financing component were not material to the individual contract, but the combined effects for a portfolio of similar contracts were material to the entity as a whole.

**Practical reliefs from the significant financing component requirements**

Some previous requirements required an entity to recognise the effects of a significant financing component with a customer only if the time period exceeded a specified period, often one year. For example, Subtopic 835-30 Interest—Imputation of Interest, excluded ‘transactions with customers or suppliers
in the normal course of business that are due in customary trade terms not exceeding approximately one year’. The boards decided to include similar relief in IFRS 15 from the requirements to account for a significant financing component in circumstances in which the period between when the entity transfers the promised goods or services to the customer, and when the customer pays for those goods or services, is one year or less (see paragraph 63 of IFRS 15). The boards observed that, as with the other practical expedients in IFRS 15, an entity should apply the practical expedient consistently to similar contracts in similar circumstances.

The boards acknowledged that the relief could produce arbitrary outcomes in some cases because the financing component could be material for short-term contracts with high implicit interest rates and, conversely, could be immaterial for long-term contracts with low implicit interest rates. However, the boards decided to exempt an entity from accounting for the effects of any significant financing component on contracts with an expected duration of one year or less for the following reasons:

(a) application of IFRS 15 would be simplified. This is because an entity would not be required to:
   (i) conclude whether those contracts contain the attributes of a financing component that are significant to those contracts (see paragraph BC232); and
   (ii) determine the interest rate that is implicit within those contracts.

(b) the effect on the pattern of profit recognition should be limited because the exemption would apply only to financing arrangements that are expected to expire within 12 months (ie when either the customer pays or the entity performs).

Some respondents also suggested that the boards should exempt an entity from reflecting in the measurement of the transaction price the effect of a significant financing component associated with advance payments from customers. Those respondents commented that accounting for any effects of a significant financing component arising from advance payments would result in the following:

(a) change previous practices in which entities typically did not recognise the effects of the financing implicit in advance payments;

(b) revenue that is higher than the cash received (for example, if the discount rate implicit in the contract resulted in the accretion of interest of CU213 over two years, revenue would be recognised in the amount of the CU121 rather than the CU100 in cash that was paid in advance); and

(c) not reflect the economics of the arrangement when the customer pays in advance for reasons other than financing (for example, the customer has significant credit risk or is compensating the entity for incurring upfront contract costs).

3 Monetary items in the Basis for Conclusions are denominated as ‘currency units’ (CU).
The boards decided not to exempt an entity from accounting for the effects of a significant financing component for advance payments. This is because ignoring the effects of advance payments could substantially skew the amount and pattern of profit recognition if the advance payment is significant and the primary purpose of that payment is to provide financing to the entity. Consider the example in which an entity requires a customer to pay in advance for a long-term construction contract, because the entity requires financing to obtain materials for the contract. If the entity did not require the customer to pay in advance, the entity would need to obtain the financing from a third party and, consequently, would charge the customer a relatively higher amount to cover the finance costs incurred. However, in either scenario the goods or services transferred to the customer are the same; it is only the party providing the financing to the entity that changes. Consequently, the entity’s revenue should be consistent regardless of whether it receives the significant financing benefit from the customer or from a third party.

**Discount rate**

The boards considered whether the discount rate used to adjust the promised amount of consideration for the effects of a significant financing component should be a risk-free rate or a risk-adjusted rate. A risk-free rate would have been observable and simple to apply in many jurisdictions and it would have avoided the costs of determining a rate specific to each contract. However, the boards decided that using a risk-free rate would not result in useful information, because the resulting interest rate would not have reflected the characteristics of the parties to the contract. In addition, the boards noted that it would not necessarily have been appropriate to use any rate explicitly specified in the contract because the entity might offer ‘cheap’ financing as a marketing incentive and, therefore, using that rate would not have resulted in an appropriate recognition of profit over the life of the contract. Consequently, the boards decided that an entity should apply the rate used in a financing transaction between the entity and its customer that does not involve the provision of goods or services because that rate reflects the characteristics of the party receiving financing in the contract. That rate also reflects the customer’s creditworthiness, among other risks.

Some respondents mentioned that determining the discount rate that would be used in a separate financing transaction between an entity and a customer would be difficult and costly because most entities within the scope of IFRS 15 do not enter into separate financing transactions with their customers. In addition, it would have been impractical for entities with large volumes of customer contracts to determine a discount rate specifically for each individual customer.

The boards addressed many of those concerns by providing both the exemption for contracts with a term of up to one year from being considered to have a significant financing component and the factors in paragraph 62 of IFRS 15, which describe when there is no significant financing component that needs to be accounted for. The boards expect that in those remaining contracts in which an entity is required to account separately for the financing component, the entity and its customer will typically negotiate the contractual payment terms.
separately after considering factors such as inflation rates and the customer’s credit risk. Therefore, an entity should have access to sufficient information to determine the discount rate that would be used in a separate financing between the entity and the customer.

**Re-evaluating the discount rate used for a significant financing component**  
[Refer: paragraph 64]

BC242 Some respondents asked whether an entity would be required to revise the discount rate used in determining the amount of a significant financing component if there was a change in circumstances.

BC243 The boards clarified that an entity should not update the discount rate for a change in circumstances because an entity should reflect in the measurement of the transaction price only the discount rate that is determined at contract inception. They also observed that it would be impractical for an entity to update the transaction price for changes in the assessment of the discount rate.

**Presentation of the effect of a significant financing component**  
[Refer: paragraph 65]

BC244 As a result of the boards’ decision on the existence of a significant financing component (see paragraphs BC229–BC243), a contract with a customer that has a significant financing component would be separated into a revenue component (for the notional cash sales price) and a loan component (for the effect of the deferred or advance payment terms). Consequently, the accounting for a trade receivable arising from a contract that has a significant financing component should be comparable to the accounting for a loan with the same features. Consider the following example: Customer A purchases a good on credit and promises to pay CU1,000 in three years. The present value of this trade receivable is CU751. Now consider Customer B who borrows CU751 from a bank with a promise to pay CU1,000 in three years. Customer B uses the loan to purchase the same good as Customer A. Economically, those transactions are the same, but, in the absence of the requirements in IFRS 15 to account for a significant financing component, the form of the transaction would determine whether an entity would recognise revenue of CU751 or CU1,000 (ie on a discounted or an undiscounted basis). For this reason, paragraphs 60–65 of IFRS 15 require a contract with a financing component that is significant to the contract to be separated, which results in the same revenue recognition for both transactions.

BC245 The boards observed that the presentation, in the statement of comprehensive income, of any impairment losses from long-term trade receivables (ie receivables arising from the financing components of contracts with customers) would be consistent with the presentation of impairment losses for other types of financial assets within the scope of the boards’ respective financial instruments Standards. The boards decided that impairment losses on short-term trade receivables (ie receivables arising from contracts with customers that do not have separately identified financing components) should
be presented in the statement of comprehensive income in a consistent manner with impairment losses on long-term trade receivables (see paragraphs BC259–BC265).

BC246 The boards decided that an entity should present the effect of the financing (ie the unwinding of the discount) separately from revenue from contracts with customers, as interest revenue or interest expense, rather than as a change to the measurement of revenue. This is because contracts with financing components that are significant have distinct economic characteristics—one relating to the transfer of goods or services to the customer and one relating to a financing arrangement—and those characteristics should be accounted for and presented separately.

BC247 The boards noted that some entities (for example, banks and other entities with similar types of operations) regularly enter into financing transactions and, therefore, interest represents income arising from ordinary activities for those entities. The boards noted that the requirements in paragraph 65 of IFRS 15 do not preclude an entity from presenting interest as a type of revenue in circumstances in which the interest represents income from the entity’s ordinary activities.

**Non-cash consideration (paragraphs 66–69)**

BC248 When an entity receives cash from a customer in exchange for a good or service, the transaction price and, therefore, the amount of revenue, should be the amount of cash received (ie the value of the inbound asset). To be consistent with that approach, the boards decided that an entity should measure non-cash consideration at fair value. The non-cash consideration could be in the form of goods or services, but it may also be in the form of a financial instrument or property, plant and equipment. For example, an entity might receive an electrical substation in exchange for connecting houses in a new residential development to the electricity network.

BC249 The boards decided that if an entity cannot reasonably estimate the fair value of the non-cash consideration, it should measure the promised consideration indirectly by reference to the stand-alone selling price of the goods or services promised in exchange for the consideration. That approach is consistent both with requirements in previous revenue Standards in IFRS and with requirements for other situations in which the fair value of the assets surrendered in exchange for assets received may be estimated more reliably. (For instance, IFRS 2 Share-based Payment and Subtopic 505-50 Equity-Based Payments to Non-Employees state that if the fair value of the goods or services received cannot be estimated reliably, then the entity measures them indirectly by reference to the fair value of the granted equity instrument.)

BC250 Some respondents observed that estimates of fair value of non-cash consideration may vary like other types of variable consideration that the entity will receive in cash. For example, an entity’s entitlement to a bonus that will be received in non-cash consideration may also depend on the occurrence or non-occurrence of a future event. Consequently, those respondents asked the boards to clarify whether the requirements for constraining estimates of
variable consideration (see paragraphs 56–58 of IFRS 15) should be applied to estimates of the fair value of non-cash consideration.

BC251 The boards observed that while the fair value of the non-cash consideration could change because of the occurrence or non-occurrence of a future event, it could also vary because of the form of the consideration. That is, the fair value could vary because of changes in the price or value of the non-cash consideration, such as a change in the price per share.

BC252 The boards decided that it would be most appropriate to apply the requirements for constraining estimates of variable consideration to the same types of variability regardless of whether the amount that will be received will be in the form of cash or non-cash consideration. Consequently, the boards decided to constrain variability in the estimate of the fair value of the non-cash consideration if that variability relates to changes in the fair value for reasons other than the form of the consideration (ie for reasons other than changes in the price of the non-cash consideration). For example, if an entity is entitled to a performance bonus that is payable in the form of non-cash consideration, the entity would apply the requirements for constraining estimates of variable consideration to the uncertainty of whether the entity will receive the bonus, because that uncertainty is related to something other than the form of the consideration (ie the entity’s performance). The boards observed that this principle is not that different from previous revenue recognition requirements under US GAAP for changes in the fair value of equity instruments that are granted as consideration in exchange for goods or services, although those requirements differentiated between the variability on the basis of performance conditions and market conditions (which were defined terms in those requirements).

BC253 The boards also observed that once recognised, any asset arising from the non-cash consideration would be measured and accounted for in accordance with other relevant requirements (for example, IFRS 9 or Topic 320 Investments—Debt and Equity Securities or Topic 323 Equity Method And Joint Ventures).

BC254 The FASB noted that the requirements in Topic 606 will result in the removal of previous requirements for the accounting for share-based payments received by an entity in exchange for goods or services. Those previous requirements provided detailed guidance for the measurement and recognition of revenue when the consideration was in the form of shares or share options. However, the FASB decided to remove those requirements because equity instruments are merely another form of non-cash consideration. Therefore, equity instruments received as promised consideration in a contract with a customer would be accounted for consistently with other forms of non-cash consideration.

**Consideration payable to a customer (paragraphs 70–72)**

BC255 In some cases, an entity pays consideration to one of its customers or to its customer’s customer (for example, an entity may sell a product to a dealer or distributor and subsequently pay a customer of that dealer or distributor). That consideration might be in the form of a payment in exchange for goods or services received from the customer, a discount or refund for goods or services provided to the customer, or a combination of both.
BC256 To help an entity distinguish between those types of payments, the boards decided that the only circumstance in which an entity should account for any good or service received in the same way as for other purchases from suppliers is if the good or service is distinct. Previous requirements in US GAAP on the consideration that a vendor gives to a customer used the term ‘identifiable benefit’, which was described as a good or service that is ‘sufficiently separable from the recipient’s purchase of the vendor’s products such that the vendor could have entered into an exchange transaction with a party other than a purchaser of its products or services in order to receive that benefit’. The boards concluded that the principle in IFRS 15 for assessing whether a good or service is distinct is similar to the previous requirements in US GAAP.

BC257 The amount of consideration received from a customer for goods or services, and the amount of any consideration paid to that customer for goods or services, could be linked even if they are separate events. For instance, a customer may pay more for goods or services from an entity than it would otherwise have paid if it was not receiving a payment from the entity. Consequently, the boards decided that to depict revenue faithfully in those cases, any amount accounted for as a payment to the customer for goods or services received should be limited to the fair value of those goods or services, with any amount in excess of the fair value being recognised as a reduction of the transaction price.

BC258 If the payment of consideration is accounted for as a reduction of the transaction price, an entity would recognise less revenue when it satisfies the related performance obligation(s). However, in some cases, an entity promises to pay consideration to a customer only after it has satisfied its performance obligations and, therefore, after it has recognised revenue. When this is the case, a reduction in revenue should be recognised immediately. Accordingly, the boards clarified that the reduction of revenue is recognised at the later of when the entity transfers the goods or services to the customer and when the entity promises to pay the consideration. By using the phrase ‘promises to pay’, the boards clarified that an entity should reflect in the transaction price payments to customers that are conditional on future events (for example, a promise to pay a customer that is conditional on the customer making a specified number of purchases would be reflected in the transaction price when the entity makes the promise).

**Customer credit risk**

BC259 The 2010 Exposure Draft proposed that an entity would recognise revenue at the amount that the entity expects to receive from the customer. In other words, the customer’s credit risk would be reflected in the measurement of the transaction price allocated to the performance obligations in the contract.

BC260 Many respondents to the 2010 Exposure Draft commented specifically about the proposed requirements for customer credit risk. Although some respondents agreed with the proposal that the transaction price should reflect the customer’s credit risk, nearly all respondents (including preparers, users of financial statements and securities regulators) expressed concerns about applying that concept in practice. In particular, many users of financial statements commented that they would prefer revenue to be measured at the ‘gross’ amount so that revenue growth and receivables management (or bad debts)
could be analysed separately. Those users of financial statements indicated that they were interested in assessing the performance of an entity’s sales function and receivables collection function separately because those functions are often managed separately. However, that information would not be available if an entity’s assessment of sales and collectability were reflected only on a ‘net’ basis in the revenue line.

After considering that feedback, the boards decided not to adopt that proposal. Instead, in the 2011 Exposure Draft, the boards proposed that revenue should be recognised at the amount to which the entity expects to be entitled, which would not reflect any adjustments for amounts that the entity might not be able to collect from the customer. However, to provide transparency to all users of financial statements for the portion of the entity’s gross revenue that is expected to be uncollectable, the boards proposed to link the presentation of the revenue line and the impairment loss line. Consequently, the 2011 Exposure Draft proposed that initial and subsequent impairment losses (and reversals) on transactions that did not include a significant financing component should be presented as a separate line item adjacent to the revenue line item.

In redeliberating the 2011 Exposure Draft, the boards considered the following challenges arising from the proposed linked presentation of revenue and impairment losses:

(a) different interpretations might have emerged about whether the reported revenue amount of the entity is the gross revenue before the impairment losses that are presented adjacent to revenue or the net revenue after those impairment losses.

(b) the impairment losses that would have been presented as a separate line item adjacent to the revenue line item might have related to uncollectable consideration that had been recognised as revenue in previous reporting periods. Consequently, there would not necessarily be a connection between the revenue recognised in a particular reporting period and the impairment losses that would have been presented adjacent to the revenue line item in that period.

(c) the impairment losses on short-term trade receivables (ie receivables arising from contracts with customers that do not have separately identified financing components) would have been presented differently from all other financial assets that are subject to impairment. This is because the impairment losses for short-term trade receivables would have been presented adjacent to revenue, whereas for all other financial assets, impairment losses would have been presented together with other expense items in the statement of comprehensive income. For the reasons described in paragraphs BC244–BC247, those other financial assets would have included receivables arising from contracts with customers that include a financing component that is significant to the contract.

The boards considered addressing some of those challenges by requiring that initial impairment losses be presented adjacent to the revenue line item and subsequent impairment losses be presented as a separate expense. The boards
observed that this approach would have provided a clearer link between revenue and the impairment losses related to the revenue recognised in that period. However, many respondents noted that it would have been challenging to distinguish between initial and subsequent impairment losses without incurring significant costs to obtain the information.

Consequently, the boards decided to modify the presentation requirements for impairment losses and to require disclosure of impairment losses on short-term trade receivables arising from a contract with a customer separate from other impairment losses (if not otherwise presented and subject to the usual materiality considerations). The boards decided that this approach is the most appropriate because it addresses the challenges identified in the 2011 Exposure Draft and still provides users of financial statements with the information that they had said would be most useful, which is gross revenue to provide revenue trend information and the impairment loss to provide information on receivables management (or bad debts). Furthermore, the boards noted that this would provide greater consistency with the accounting for impairment losses on contracts with customers that include a significant financing component.

However, the boards were concerned that for some transactions in which there is significant credit risk at contract inception, an entity might recognise revenue for the transfer of goods or services and, at the same time, recognise a significant bad debt expense. The boards decided that in those cases, ‘grossing up’ revenue and recognising a significant impairment loss would not faithfully represent the transaction and would not provide useful information. Consequently, the boards included the criterion in paragraph 9(e) of IFRS 15 (see paragraphs BC42–BC46).

**Allocating the transaction price to performance obligations (paragraphs 73–86)**

The boards decided that an entity should generally allocate the transaction price to all performance obligations in proportion to the stand-alone selling prices of the goods or services underlying each of those performance obligations at contract inception (ie on a relative stand-alone selling price basis). They decided that in most cases an allocation based on stand-alone selling prices faithfully depicts the different margins that may apply to promised goods or services.

Most respondents agreed with the requirement to allocate the transaction price on a relative stand-alone selling price basis. Some of those respondents observed that the requirements were broadly consistent with previous changes to US GAAP for multiple-element arrangements. However, respondents expressed concerns about the following topics:

(a) estimating the stand-alone selling price; and

(b) allocating discounts and contingent consideration.

**Estimating stand-alone selling prices (paragraphs 76–80)**

IFRS 15 specifies that if an entity does not have an observable price from selling a good or service separately, the entity should instead estimate the stand-alone selling price. Paragraph 79 of IFRS 15 includes examples of suitable estimation
methods for estimating the stand-alone selling price. However, the boards decided not to preclude or prescribe any particular method for estimating a stand-alone selling price so long as the estimate is a faithful representation of the price at which the entity would sell the distinct good or service if it were sold separately to the customer. The boards clarified that the method used by the entity to estimate a stand-alone selling price should maximise the use of observable inputs and should be applied consistently to estimate the stand-alone selling price of other goods or services with similar characteristics.

The boards observed that many entities may already have robust processes for determining stand-alone selling prices on the basis of reasonably available data points and the effects of market considerations and entity-specific factors. However, other entities may need to develop processes for estimating selling prices of goods or services that are typically not sold separately. The boards decided that when developing those processes, an entity should consider all reasonably available information on the basis of the specific facts and circumstances. That information might include the following:

(a) reasonably available data points (for example, a stand-alone selling price of the good or service, the costs incurred to manufacture or provide the good or service, related profit margins, published price listings, third-party or industry pricing and the pricing of other goods or services in the same contract);
(b) market conditions (for example, supply and demand for the good or service in the market, competition, restrictions and trends);
(c) entity-specific factors (for example, business pricing strategies and practices); and
(d) information about the customer or class of customer (for example, type of customer, geographical region and distribution channel).

Residual approach

In response to questions from respondents, the boards decided to specify that a residual approach might be a suitable technique for estimating the stand-alone selling price of a good or service. Using a residual approach, an entity would estimate a stand-alone selling price of a good or service on the basis of the difference between the total transaction price and the (observable) stand-alone selling prices of other goods or services in the contract.

The boards also decided to specify how and when an entity can use the residual approach as an estimation method in paragraph 79(c) of IFRS 15. Specifically, in situations in which one or more promised goods or services have a stand-alone selling price that is highly variable or uncertain. In specifying those circumstances, the boards were particularly mindful of the challenges in determining stand-alone selling prices in contracts for intellectual property and other intangible products. In those arrangements, the pricing can be highly variable because there is little or no incremental cost to the entity in providing those goods or services to a customer. In those circumstances, the most reliable way of determining the stand-alone selling price in the contract will often be to use a residual approach. For the same reason, the boards noted that the residual
approach might be appropriate in situations in which an entity has not yet established the selling price for a good or service that previously has not been sold on a stand-alone basis.

Most respondents agreed with the boards’ proposals on the residual approach. However, some respondents, particularly those in the software industry, asked the boards to clarify whether they could use a residual approach if there is more than one good or service in the contract with highly variable or uncertain stand-alone selling prices. Those respondents observed that this may occur in contracts that include three or more performance obligations, in which at least one of the performance obligations has an observable stand-alone selling price. The boards decided that even if a contract includes more than one good or service with a highly variable or uncertain stand-alone selling price, an entity should not be prevented from applying the residual approach because it may still be a reliable method for determining the stand-alone selling price. However, the boards observed that using the residual approach when there are two or more goods or services with highly variable or uncertain stand-alone selling prices may require an entity to use a combination of techniques to estimate the stand-alone selling prices as follows:

(a) apply the residual approach to estimate the aggregate of the stand-alone selling prices for all the promised goods or services with highly variable or uncertain stand-alone selling prices; and

(b) then use another technique to estimate the stand-alone selling prices of each of those promised goods or services with highly variable or uncertain stand-alone selling prices.

In determining whether the estimate is reasonable, the boards observed that it was important to understand that the residual approach for estimating the stand-alone selling price of a promised good or service is different from the residual method permitted under previous revenue Standards. This is because in IFRS 15 the residual approach is used to determine the stand-alone selling price of a distinct good or service. By definition, the outcome of this approach cannot realistically result in a stand-alone selling price of zero if the good or service is in fact distinct because to be distinct that good or service must have value on a stand-alone basis. In contrast, the residual method in previous revenue Standards could have resulted in an outcome of zero because the residual method was an allocation method. Thus, under previous revenue recognition requirements, zero could be the only amount of consideration that remained to be allocated to a performance obligation. Consequently, the boards noted that if the residual approach in paragraph 79(c) of IFRS 15 results in no, or very little, consideration being allocated to a good or service or a bundle of goods or services, the entity should consider whether that estimate is appropriate in those circumstances.

Specifying a hierarchy of evidence

The boards decided not to specify a hierarchy of evidence to determine the stand-alone selling price of a good or service. Instead, they decided to emphasise that an entity should maximise the use of observable inputs when developing estimates of stand-alone selling prices.
Most respondents agreed with the boards’ decision not to prescribe a hierarchy of evidence for estimating a stand-alone selling price. However, some respondents recommended that the boards should specify a hierarchy of evidence, because specifying a hierarchy of evidence for determining stand-alone selling prices (and requiring disclosures using that hierarchy) would enhance the quality and reliability of an entity’s reported revenues. The hierarchy suggested by those respondents was similar to that in previous revenue Standards:

(a) if vendor-specific objective evidence of a selling price is available, an entity would use this price to determine the selling price of a promised good or service;

(b) if vendor-specific objective evidence is not available, an entity would determine the selling price using third-party evidence, if available; and

(c) if third-party evidence is not available, an entity would use its best estimate of the selling price.

The boards observed that IFRS 15 requires an entity to use observable prices when a good or service is sold separately by the entity (which is similar to a vendor-specific objective evidence notion). It is only when a good or service is not sold separately that an entity is required to estimate the stand-alone selling price. In that estimation process, an entity is still required to maximise the use of observable inputs. The boards noted that in the hierarchy in paragraph BC275 there is little distinction between third-party evidence and a best estimate of a selling price. For instance, third-party evidence of a selling price might require adjustments to reflect differences in either (a) the good or service (because the third-party price could be for a similar, rather than an identical, good or service) or (b) pricing strategies between the third party and the entity. Therefore, the boards affirmed their decision not to specify a hierarchy in IFRS 15. Instead, the boards decided that it was important to emphasise that an entity should maximise the use of observable inputs when developing estimates of stand-alone selling prices.

**Allocating discounts and variable consideration**

(paragraphs 81–86)

A consequence of allocating the transaction price on a relative stand-alone selling price basis is that any discount in the contract is allocated proportionately to each of the performance obligations in the contract. Some respondents noted that this would not always faithfully depict the amount of consideration to which an entity is entitled for satisfying a particular performance obligation. For example, those respondents noted that the allocation of the discount could result in a loss on one part of the contract although the contract as a whole may be profitable (for example, the contract contains both a high-margin item and a low-margin item). They suggested that the boards should permit an entity to allocate the discount in a contract using one of the following alternatives:

(a) a management approach, in which an entity would assess which promised good or service is priced at a discount to its stand-alone selling price.
(b) a residual approach, in which any discount in the contract would be allocated entirely to the satisfied performance obligations.

(c) a profit margin approach, in which an entity would allocate the discount in a contract in proportion to the individual profit margin on each performance obligation. The individual profit margin for each performance obligation is the difference between the stand-alone selling price and the direct costs of the good or service underlying each performance obligation.

BC278 Another consequence of allocating the transaction price on a relative stand-alone selling price basis is that any amount of consideration that is variable will be allocated to each of the performance obligations in the contract. Some respondents noted that this allocation will not always faithfully depict the amount of consideration to which an entity is entitled upon satisfying a particular performance obligation, if the variable consideration does not relate to all of the performance obligations in the contract. Many suggested that any adjustment in the transaction price as a result of variable amounts should be allocated only to the performance obligation(s) to which the variable amounts relate.

BC279 The boards noted that the objective of the revenue recognition model is for an entity to recognise revenue in the amount of consideration to which it expects to be entitled from the customer in exchange for transferring goods or services. The relative stand-alone selling price basis allocation is simply a method to achieve that objective rather than being the allocation principle.

BC280 However, the boards also noted that allocating the transaction price on a relative stand-alone selling price basis brings rigour and discipline to the process of allocating the transaction price and, therefore, enhances comparability both within an entity and across entities. Consequently, the boards decided that it should be the default method for allocating the transaction price. However, they agreed with respondents that it might not always result in a faithful depiction of the amount of consideration to which the entity expects to be entitled from the customer. Accordingly, in paragraphs 81–86 of IFRS 15, the boards specified the circumstances in which other methods should be used.

Allocating discounts (paragraphs 81–83)

BC281 IFRS 15 requires an entity to allocate a discount entirely to one or more, but not all, performance obligations in the contract if the entity has observable selling prices for each performance obligation in the contract and those observable stand-alone selling prices provide evidence that the entire discount in the contract is specifically attributable to one or more of those performance obligations. Those requirements are largely based on the ‘contract segmentation’ principle that was included in the 2010 Exposure Draft, which only allowed a discount to be allocated entirely to one or more performance obligations on the basis of goods or services that are priced independently.

BC282 Some respondents questioned whether the requirements in paragraph 82 of IFRS 15 for allocating a discount are too restrictive and, therefore, might yield outcomes that are inconsistent with the economics of some transactions. However, the boards noted that the requirements are included to maintain the
rigour and discipline of a stand-alone selling price allocation and, thus, appropriately restrict the situations in which a discount should not be allocated pro rata to all performance obligations in the contract.

The boards also noted that paragraph 82 of IFRS 15 would typically apply to contracts for which there are at least three performance obligations. This is because an entity could demonstrate that a discount relates to two or more performance obligations when it has observable information supporting the stand-alone selling price of a group of those promised goods or services when they are sold together. The boards noted that it may be possible for an entity to have sufficient evidence to be able to allocate a discount to only one performance obligation in accordance with the criteria in paragraph 82, but the boards expected that this could only occur in rare cases.

**Allocating variable consideration (paragraphs 84–86)**

The boards agreed with respondents that it would not always be appropriate for an entity to allocate the variable consideration in a transaction price to all of the performance obligations in a contract. For example, an entity may contract to provide two products at different times with a bonus that is contingent on the timely delivery of only the second product. In that example, it might be inappropriate to attribute variable consideration included in the transaction price to both products. Similarly, an entity may contract to provide two products at different times with a fixed amount for the first product that represents that product’s stand-alone selling price, and a variable amount that is contingent on the delivery of the second product. That variable amount might be excluded from the estimate of the transaction price (ie because of the requirements for constraining estimates of the transaction price). In that case, it might be inappropriate to attribute the fixed consideration included in the transaction price to both products. Consequently, the boards specified the criteria in paragraphs 84–86 of IFRS 15 to identify the circumstances in which an entity should allocate the variable consideration entirely to a performance obligation or to a distinct good or service (that forms part of a single performance obligation) rather than to the contract as a whole. The boards decided that those criteria are necessary to ensure an appropriate allocation of the transaction price when there is variable consideration in the transaction price.

The boards clarified in paragraph 84(b) of IFRS 15 that variable consideration can be allocated to distinct goods or services even if those goods or services form a single performance obligation. The boards made this clarification to ensure that an entity can, in some cases, attribute the reassessment of variable consideration to only the satisfied portion of a performance obligation when that performance obligation meets the criterion in paragraph 22(b) of IFRS 15. Consider the example of a contract to provide hotel management services for one year (ie a single performance obligation in accordance with paragraph 22(b) of IFRS 15) in which the consideration is variable and determined based on two per cent of occupancy rates. The entity provides a daily service of management that is distinct and the uncertainty related to the consideration is also resolved on a daily basis when the occupancy occurs. In those circumstances, the boards did not intend for an entity to allocate the variable...
consideration determined on a daily basis to the entire performance obligation (ie the promise to provide management services over a one-year period). Instead, the variable consideration should be allocated to the distinct service to which the variable consideration relates, which is the daily management service.

Changes in transaction price

BC286 The boards also decided to specify that any subsequent changes in the transaction price should be allocated in a manner that is consistent with the allocation methodology at contract inception. This ensures that changes in the estimate of the variable consideration that are included in (or excluded from) the transaction price are allocated to the performance obligation(s) to which the variable consideration relates. Consequently, the boards specified in paragraph 89 of IFRS 15 that an entity should allocate a change in the transaction price entirely to one or more distinct goods or services if the criteria in paragraph 85 of IFRS 15 are met.

Contingent revenue cap and the portfolio approach to allocation

BC287 Some respondents disagreed with the boards’ proposal that the transaction price should be allocated on a relative stand-alone selling price basis. Those respondents (primarily from the telecommunications and cable television industries) disagreed because allocating the transaction price using relative stand-alone selling prices on a contract-by-contract basis could be complex and costly for their industries. This is because entities in those industries:

(a) have a high volume of contracts with various potential configurations;
(b) provide multiple goods and services in those contracts;
(c) include a discount in the contracts; and
(d) provide the goods or services at different times.

BC288 Those respondents also disagreed with allocating the transaction price on the basis of relative stand-alone selling prices because it would provide a revenue recognition pattern that they considered would not be useful to users of their financial statements.

BC289 Those respondents requested that the boards should carry forward previous revenue recognition requirements in US GAAP (previously referred to as ‘the contingent revenue cap’). Those requirements were previously used by many telecommunications entities applying US GAAP and IFRS. In the respondents’ view, carrying forward those requirements would have simplified the application of the revenue recognition model by limiting the amount of consideration that a telecommunications entity could allocate to a handset that is bundled with network services to the amount that is not contingent on the delivery of network services in the future. Consequently, revenue would have been recognised at the amount that the customer paid for the handset at contract inception when the handset was transferred to the customer. The remaining contractual payments would have been recognised subsequently as revenue as the entity provided network services to the customer. Many users of
This natural text represents the content of the document in a readable format:

Financial statements of entities in the telecommunications industry agreed that this revenue recognition pattern would have been useful because it closely relates to the timing of cash received.

Respondents from the telecommunications industry commented that without a contingent revenue cap, not only will the application of the revenue recognition model be complex, but revenue will also be recognised for delivering a handset in an amount that exceeds the amount of consideration paid for the handset. In their view, this is inappropriate because it will not be useful to users of their financial statements and, in a separate objection, because they will be entitled to collect the excess only when they provide the network services. Consequently, they reasoned that the contract asset that will result from recognising revenue for delivery of the handset will not meet the definition of an asset. In addition, they suggested that without a contingent revenue cap, the model will be complex and costly to apply because of the high volume of contracts that they will have to manage and the various potential configurations of handsets and network service plans.

However, the boards decided not to carry forward the contingent revenue cap for the following reasons:

(a) limiting the amount of consideration that can be allocated to a satisfied performance obligation is tantamount to cash-basis accounting and does not meet the core principle of IFRS 15. This is because revenue recognised would not depict the amount of consideration to which an entity expects to be entitled for the delivered good or service. Consequently, the contingent revenue cap could result in economically similar contracts being accounted for differently.

(b) the contingent revenue cap can result in the recognition of losses if the contract is profitable. That would occur if the amount allocated to a satisfied performance obligation is limited to an amount (potentially to zero) that is less than the expenses recognised for the costs of providing the good or service (unless those costs are deferred). However, costs relating to a good or service already transferred to a customer would not give rise to an asset.

(c) recognising a contract asset in the situation described in paragraph BC290 is appropriate because the entity has a valuable contractual right as a result of satisfying a performance obligation and that right meets the definition of an asset. That right exists even if the entity does not have the unconditional right to collect consideration from the customer. This is because if the entity were to transfer the remaining rights and performance obligations in the contract to a third party after it had delivered a handset, it would expect to be compensated for that past performance.

(d) applying the contingent cap more broadly than it was applied in previous revenue Standards could have had far-reaching consequences. For example, in many service contracts (including construction contracts), it is appropriate to recognise revenue when services are provided even though the amount of consideration is contingent on the entity’s future performance. Otherwise, the entity would not recognise
any revenue until reaching a contract milestone or potentially until completion of the contract (which would not depict the transfer of goods or services to the customer).

(e) although the consequences for construction and other service contracts could have been reduced by limiting the amount allocated to satisfied performance obligations (rather than limiting the amount allocated to a satisfied portion of a single performance obligation), the boards decided that this would have created an arbitrary distinction and would have put additional pressure on the criteria for identifying performance obligations.

(f) for many contracts that were previously accounted for under the contingent revenue cap, the amount of consideration allocated to delivered items was not contingent because, even if the customer cancelled the contract, the customer would have been obliged to pay for the delivered item(s). For example, in some contracts for the sale of a handset and network services, either the contract was not cancellable or, if it was, the customer was obliged to pay a termination fee that corresponded with the value of the handset that was delivered upfront (even if the entity might choose not to enforce payment of that fee).

BC292 In addition, the boards decided not to introduce an exception to the revenue recognition model for telecommunications and similar contracts because they do not view those contracts as being different from other contracts in which an entity transfers a bundle of goods or services. Furthermore, the boards decided that IFRS 15 provides a more consistent basis for recognising revenue and produces results in accounting that more closely match the underlying economics of transactions.

BC293 The boards also observed that entities in the telecommunications industry may be able to simplify the application of the model by using portfolio techniques (as envisioned by the practical expedient specified in paragraph 4 of IFRS 15) to allocate the transaction price for a group of similar contracts (see paragraphs BC69–BC70). The boards considered whether they should provide more specific guidance as to when an entity could use a portfolio approach for allocating the transaction price. However, the boards decided not to do so because they were concerned that any further guidance (for example, by including criteria that an entity would need to meet to apply a portfolio approach) might make the practical expedient less useful across entities or jurisdictions.

Onerous performance obligations

BC294 In the 2010 and the 2011 Exposure Drafts, the boards proposed including requirements for identifying and measuring onerous performance obligations in contracts with customers (i.e. an ‘onerous test’). In those proposals, the boards concluded that an onerous test was needed because the initial measurements of performance obligations are not routinely updated. In addition, the boards noted that including an onerous test would achieve greater convergence of IFRS and US GAAP.
However, many respondents to the 2010 and the 2011 Exposure Drafts disagreed with the onerous test and highlighted a number of practical application difficulties. Furthermore, many explained that strict application of the onerous test would have resulted in recognition of liabilities in cases in which the outcome of fulfilling a single performance obligation was onerous but the outcome of fulfilling the entire contract would be profitable. A number of respondents suggested removing the onerous test from the revenue proposals because, in addition to being complex and difficult to apply, the requirements for recognition of onerous losses are already sufficiently addressed in other Standards. Those respondents commented that:

(a) for IFRS, the onerous test in IAS 37 and the requirements in IAS 2 Inventories already provide sufficient guidance for determining when to recognise losses arising from contracts with customers.

(b) for US GAAP, existing requirements for recognition of losses from contracts are adequate and if a change to those requirements is necessary, that change could instead be handled in a separate project that addresses liabilities in Topic 450.

The boards agreed that existing requirements in both IFRS and US GAAP could adequately identify onerous contracts. Furthermore, the boards noted that although their existing requirements for onerous contracts are not identical, they are not aware of any pressing practice issues resulting from the application of those existing requirements. Consequently, the boards decided that IFRS 15 should not include an onerous test. Instead, entities applying IFRS or US GAAP will use their respective existing requirements for the identification and measurement of onerous contracts.

Contract costs (paragraphs 91–104)

Incremental costs of obtaining a contract (paragraphs 91–94)

The boards decided that an entity should recognise as an asset the incremental costs of obtaining a contract with a customer if the entity expects to recover those costs. The boards defined the incremental costs of obtaining a contract as the costs that an entity incurs in its efforts to obtain a contract that would not have been incurred if the contract had not been obtained. The boards acknowledged that, in some cases, an entity’s efforts to recognise an asset from incremental acquisition costs might exceed the financial reporting benefits. Consequently, as a practical expedient, the boards decided to allow an entity to recognise those costs as expenses when incurred for contracts in which the amortisation period for the asset that the entity otherwise would have recognised is one year or less.

The boards considered requiring an entity to recognise all of the costs of obtaining a contract as expenses when those costs are incurred. The boards observed that, conceptually, an entity may obtain a contract asset as a result of its efforts to obtain a contract (because the measure of the remaining rights might exceed the measure of the remaining obligations). However, because the principle in IFRS 15 requires an entity to recognise a contract asset and revenue
only as a result of satisfying a performance obligation in the contract, the boards observed that on the basis of that reasoning, the contract asset would be measured at zero at contract inception and any costs of obtaining a contract would therefore be recognised as expenses when incurred.

BC299 Many respondents disagreed with recognising all costs to obtain a contract as expenses when incurred because those costs meet the definition of an asset in some cases. In addition, they noted the following:

(a) other Standards require some of the costs of obtaining a contract to be included in the carrying amount of an asset on initial recognition; and
(b) the recognition of the costs of obtaining a contract as expenses would be inconsistent with the tentative decisions in the boards’ projects on leases and insurance contracts.

BC300 During the redeliberations, the boards decided that, in some cases, it might be misleading for an entity to recognise all the costs of obtaining a contract as expenses, when incurred. For example, the boards observed that recognising the full amount of a sales commission as an expense at inception of a long-term service contract (when that sales commission is reflected in the pricing of that contract and is expected to be recovered) would fail to acknowledge the existence of an asset.

BC301 Consequently, the boards decided that an entity would recognise an asset from the costs of obtaining a contract and would present the asset separately from the contract asset or the contract liability. To limit the acquisition costs to those that can be clearly identified as relating specifically to a contract, the boards decided that only the incremental costs of obtaining a contract should be included in the measurement of the asset, if the entity expects to recover those costs. The boards decided that determining whether other costs relate to a contract is too subjective.

BC302 The boards noted that it might be difficult for some entities to determine whether a commission payment is incremental to obtaining a new contract (for example, payment of a commission might depend on the entity successfully acquiring several contracts). The boards considered whether to allow an accounting policy election for contract costs, under which an entity would have been able to choose to recognise an asset from the acquisition costs or recognise those costs as an expense (with disclosure of the accounting policy election). The boards noted that this would have been consistent with previous revenue recognition requirements in US GAAP for public entities. However, the boards noted that introducing accounting policy elections into IFRS 15 would have reduced comparability and therefore would not have met one of the key objectives of the Revenue Recognition project to improve comparability in accounting among entities and industries. Consequently, the boards decided not to allow entities an accounting policy election with respect to contract acquisition costs.

BC303 The FASB noted that depending on the specific facts and circumstances of the arrangement between an asset manager and the other parties in the relationship, the application of the requirements for incremental costs of obtaining a contract might have resulted in different accounting for sales
commissions paid to third-party brokers (ie in some cases the commission would have been recognised as an asset while in others it would have been recognised as an expense). The FASB observed that it had not intended the application of the cost requirements to result in an outcome for these specific types of sales commissions that would be different from applying existing US GAAP. Consequently, the FASB decided to retain the specific cost requirements for investment companies in paragraph 946-605-25-8 of the Codification which has been moved to Subtopic 946-720 Financial Services—Investment Companies—Other Expenses.

Costs to fulfil a contract (paragraphs 95–98)

The boards developed requirements for accounting for some costs to fulfil a contract. Those requirements were developed in response to concerns that the proposals in the Discussion Paper focused on how an entity should recognise revenue in a contract without considering how the entity should account for the costs to fulfil a contract. Some respondents, particularly those from the construction industry, said that requirements for profit margin recognition are as important as requirements for revenue recognition. Other respondents, mainly preparers who apply US GAAP, were concerned about the withdrawal of requirements for costs that were developed specifically for their own industries.

The cost requirements in IFRS 15 are intended to achieve the following:

(a) fill the gap arising from the withdrawal of previous revenue Standards—IFRS 15 will result in the withdrawal of some requirements for contract costs, in particular, the previous requirements for accounting for construction contracts.

(b) improve current practice—the cost requirements provide clearer requirements for accounting for some costs to fulfil a contract (for example, setup costs for services) and result in an entity no longer having to rely on, or analogise to, requirements that were not developed specifically for contracts with customers. For instance, in accounting for setup costs, an entity applying US GAAP may previously have needed to analogise to the guidance on the deferral of direct loan origination costs in paragraph 310-20-25-2 of the Codification. An entity applying IFRS may have evaluated those costs in accordance with IAS 38 Intangible Assets. Specifying clear requirements will also result in greater consistency in practice.

(c) promote convergence in accounting for contract costs—more costs will be accounted for similarly under IFRS and US GAAP (although total consistency in accounting for costs to fulfil a contract will not be achieved unless the boards align their respective Standards on inventories; property, plant and equipment; intangible assets and impairment of assets).

Most respondents supported the boards’ inclusion of requirements that address some of the costs to fulfil a contract. Some respondents recommended that the boards address cost requirements comprehensively in a separate project. However, because cost requirements are included in many Standards (such as the ones described in paragraph BC305(c)), the boards noted that this would
require reconsideration of those Standards and, therefore, decided against broadening the scope of the cost requirements.

BC307 Because the boards decided not to reconsider all cost requirements comprehensively, paragraphs 91–98 of IFRS 15 specify the accounting for contract costs that are not within the scope of other Standards. Consequently, if the other Standards preclude the recognition of any asset arising from a particular cost, an asset cannot then be recognised under IFRS 15 (for example, in IFRS, initial operating losses, such as those incurred while demand for an item builds, will continue to be accounted for in accordance with paragraph 20(b) of IAS 16 and, in US GAAP, pre-production costs under long-term supply arrangements will continue to be accounted for in accordance with paragraphs 340-10-25-5 through 25-8 of the Codification).

IFRS 15 clarifies that only costs that give rise to resources that will be used in satisfying performance obligations in the future and that are expected to be recovered are eligible for recognition as assets. Those requirements ensure that only costs that meet the definition of an asset are recognised as such and that an entity is precluded from deferring costs merely to normalise profit margins throughout a contract by allocating revenue and costs evenly over the life of the contract. To provide a clear objective for recognising and measuring an asset arising from the costs to fulfill a contract, the boards decided that only costs that relate directly to a contract should be included in the cost of the asset.

**Amortisation and impairment (paragraphs 99–104)**

BC309 The boards decided that an entity should amortise the asset recognised from the costs of obtaining and fulfilling a contract in accordance with the pattern of transfer of goods or services to which the asset relates. Respondents broadly agreed; however, some asked the boards to clarify whether those goods or services could relate to future contracts. Consequently, the boards clarified that in amortising the asset in accordance with the transfer of goods or services to which the asset relates, those goods or services could be provided under a specifically anticipated (ie future) contract. That conclusion is consistent with the notion of amortising an asset over its useful life and with other Standards. However, amortising the asset over a longer period than the initial contract would not be appropriate in situations in which an entity pays a commission on a contract renewal that is commensurate with the commission paid on the initial contract. In that case, the acquisition costs from the initial contract do not relate to the subsequent contract.

BC310 The boards considered testing a recognised asset arising from fulfilment costs for impairment using one of the existing impairment tests in their respective requirements (for example, IAS 2 and IAS 36 Impairment of Assets or Topic 330 Inventory, Topic 360 Property, Plant and Equipment and Subtopic 985-20 Software–Costs of Software to Be Sold, Leased, or Marketed). However, the boards decided that an entity should consider only the economic benefits in the contract with the customer and, consequently, the impairment test should be based on comparing the carrying amount of the asset with the remaining amount of promised consideration in exchange for the goods or services to which the asset relates, less the remaining costs of providing those goods or services. The boards decided that for purposes of impairment testing, the entity
should consider future cash flows that may be too uncertain to include in the recognition of revenue (see paragraphs BC203–BC223). The boards decided this because their objective for measuring and recognising impairments of contract acquisition and fulfilment costs is different from the measurement objective for revenue. The impairment objective is to determine whether the carrying amount of the contract acquisition and fulfilment costs asset is recoverable. Consequently, the measurement objective is consistent with other impairment methods in IFRS and US GAAP that include an assessment of customer credit risk and expectations of whether amounts of variable consideration will be received.

BC311 The FASB decided that an entity should not reverse an impairment charge when the reasons for the impairment no longer exist. Conversely, the IASB decided that the impairment charge should be reversed in those circumstances under IFRS. The boards acknowledged that this would result in entities accounting differently for those contract costs using IFRS and US GAAP. However, the boards decided that it is important for the requirements to be consistent with their respective impairment models for other types of assets and those impairment models differ in their accounting for reversals of impairments.

Learning curve

BC312 A ‘learning curve’ is the effect of efficiencies realised over time when an entity’s costs of performing a task (or producing a unit) decline in relation to how many times the entity performs that task (or produces that unit). The phenomenon of a learning curve can exist independently of a contract with a customer. For example, a typical manufacturer that produces units of inventory would become more efficient in its production process over time. Some respondents asked how to apply the proposals to account for the effects of learning costs in a contract with a customer.

BC313 The boards noted that IFRS 15 addresses the accounting for the effects of learning costs if both of the following conditions are satisfied:

- an entity has a single performance obligation to deliver a specified number of units; and
- the performance obligation is satisfied over time.

BC314 In that situation, an entity recognises revenue by selecting a method of measuring progress that depicts the transfer over time of the good or service to the customer. An entity would probably select a method (for example, cost-to-cost) that results in the entity recognising more revenue and expense for the early units produced relative to the later units. That effect is appropriate because of the greater value of the entity’s performance in the early part of the contract because, if an entity were to sell only one unit, it would charge the customer a higher price for that unit than the average unit price the customer pays when the customer purchases more than one unit.

BC315 In other situations, an entity may promise to deliver a specified number of units in a contract, but that promise does not give rise to a single performance obligation that is satisfied over time. The boards decided that, in those situations, an entity should apply the requirements of other Standards (for example, IAS 2) for the following reasons:
if an entity incurs costs to fulfil a contract without also satisfying a
performance obligation over time, the entity probably would be creating
an asset included within the scope of other Standards (for example, the
costs of producing tangible units would accumulate as inventory, and
the entity would select an appropriate method of measuring that
inventory). In those cases, the boards decided that an entity should not
account for the learning curve differently depending on whether or not a
contract exists.

the type of contract described in this paragraph is not the type of
contract typically entered into by respondents who asked how the
requirements of IFRS 15 would apply to learning curve effects (in most
cases, those respondents enter into contracts that would be accounted
for as a performance obligation satisfied over time).

The boards, however, acknowledged the diversity in practice when accounting
(in accordance with other Standards) for the costs of products produced under
long-term production programmes, but agreed that they could not address these
matters as part of the Revenue Recognition project.

Presentation (paragraphs 105–109)

The boards decided that the remaining rights and performance obligations in a
contract should be accounted for and presented on a net basis, as either a
contract asset or a contract liability. The boards noted that the rights and
obligations in a contract with a customer are interdependent—the right to
receive consideration from a customer depends on the entity’s performance and,
similarly, the entity performs only as long as the customer continues to pay. The
boards decided that those interdependencies are best reflected by accounting
and presenting on a net basis the remaining rights and obligations in the
statement of financial position.

The boards considered whether the rights and performance obligations in
contracts that are subject to the legal remedy of specific performance should be
presented on a gross basis, that is, as separate assets and liabilities. The boards
observed that in the event of a breach of contract, some contracts require the
entity and the customer to perform as specified in the contract. Consequently,
unlike most contracts that can be settled net, specific performance contracts
generally result in a two-way flow of resources between the customer and the
entity. Specific performance contracts are akin to financial contracts that are
settled by physical delivery rather than by a net cash payment and for which the
units of account are the individual assets and liabilities arising from the
contractual rights and obligations.

However, the boards decided against making an exception for specific
performance contracts. This is because the remedy of specific performance is
relatively rare and is not available in all jurisdictions. In addition, it is only one
of a number of possible remedies that could be awarded by a court if legal action
were taken for breach of contract.
The boards decided that IFRS 15 should not specify whether an entity is required to present its contract assets and contract liabilities as separate line items in the statement of financial position. Instead, an entity should apply the general principles for the presentation of financial statements to determine whether to present contract assets and contract liabilities separately in the statement of financial position. For example, IAS 1 Presentation of Financial Statements requires an entity to present separately each class of similar items and items of a dissimilar nature or function unless they are immaterial. [Refer: paragraph 109]

The boards also observed that some industries have historically used different labels to describe contract assets and contract liabilities or may recognise them in more than one line item either in the financial statements or in the notes. Because that additional detail is often useful to users of those financial statements, the boards decided that an entity could use different descriptions of contract assets, contract liabilities and receivables, and could use additional line items to present those assets and liabilities if the entity also provides sufficient information for users of financial statements to be able to distinguish them.

**Relationship between contract assets and receivables**

[Refer: paragraphs 107 and 108]

When an entity performs first by satisfying a performance obligation before a customer performs by paying the consideration, the entity has a contract asset—a right to consideration from the customer in exchange for goods or services transferred to the customer. [Refer: Appendix A]

In many cases, that contract asset is an unconditional right to consideration—a receivable—because only the passage of time is required before payment of that consideration is due. However, in other cases, an entity satisfies a performance obligation but does not have an unconditional right to consideration, for example, because it first needs to satisfy another performance obligation in the contract. The boards decided that when an entity satisfies a performance obligation but does not have an unconditional right to consideration, an entity should recognise a contract asset in accordance with IFRS 15. The boards noted that making the distinction between a contract asset and a receivable is important because doing so provides users of financial statements with relevant information about the risks associated with the entity’s rights in a contract. That is because although both would be subject to credit risk, a contract asset is also subject to other risks, for example, performance risk.

Once an entity has an unconditional right to consideration, it should present that right as a receivable separately from the contract asset and account for it in accordance with other requirements (for example, IFRS 9 or Topic 310). The boards decided that IFRS 15 need not address the accounting for receivables in addition to revenue recognition. Issues such as the measurement (or impairment) of receivables and disclosures relating to those assets are already addressed in IFRS and US GAAP.

In many cases, an unconditional right to consideration arises when the entity satisfies the performance obligation and invoices the customer. For example, a payment for goods or services is typically due and an invoice is issued when the
entity has transferred the goods or services to the customer. However, the act of invoicing the customer for payment does not indicate whether the entity has an unconditional right to consideration. For instance, the entity may have an unconditional right to consideration before it invoices (unbilled receivable) if only the passage of time is required before payment of that consideration is due. In other cases, an entity can have an unconditional right to consideration before it has satisfied a performance obligation. For example, an entity may enter into a non-cancellable contract that requires the customer to pay the consideration a month before the entity provides goods or services. In those cases, on the date when payment is due, the entity has an unconditional right to consideration. (However, in those cases, the entity should recognise revenue only after it transfers the goods or services.)

The boards observed that in some cases, an entity will have an unconditional right to consideration, even though the entity may be required to refund some or all of that consideration in the future. In those cases, the possible obligation to refund consideration in the future will not affect the entity’s present right to be entitled to the gross amount of consideration. In those cases, the boards observed that an entity may recognise a receivable and a refund liability (for example, when a right of return exists).

Disclosure (paragraphs 110–129)

Some of the main criticisms from regulators and users of financial statements about prior revenue Standards in IFRS and US GAAP related to the disclosure requirements. Broadly, regulators and users of financial statements found the disclosure requirements to be inadequate and lacking cohesion with the disclosure of other items in the financial statements. This lack of cohesion made it difficult to understand an entity’s revenues, as well as the judgements and estimates made by the entity in recognising those revenues. For example, many users of financial statements observed that entities presented revenue in isolation, with the result that users of financial statements could not relate revenue to the entity’s financial position. Consequently, one of the boards’ goals in undertaking the Revenue Recognition project was to provide users of financial statements with more useful information through improved disclosure requirements. Many respondents broadly supported that goal. However, respondents’ views about the proposed disclosure requirements in the 2011 Exposure Draft were polarised—users of financial statements supported the proposed disclosure requirements because those requirements would have been a significant improvement over previous requirements. In contrast, other respondents (primarily preparers) noted that, when viewed as a whole, the proposed disclosure requirements would have resulted in voluminous disclosures and they questioned whether the proposed disclosures were justifiable on a cost-benefit basis.

Because of those polarised views, the boards held workshops with users of financial statements and preparers between September and December 2012 in London (United Kingdom), Tokyo (Japan), and Norwalk and New York City (United States). The objective of those workshops was to discuss issues on disclosure and transition and to identify potential solutions to address both
users’ needs for useful information and preparers’ concerns about the costs of providing that information. As a result of the feedback provided through workshops, other outreach efforts and the comment letters, the boards refined the disclosure requirements proposed in the 2011 Exposure Draft. Those refinements and the reasons for the boards’ decisions are explained in paragraphs BC330–BC361.

BC329 The boards noted that the disclosure requirements in paragraphs 110–129 of IFRS 15 are comprehensive and represent a significant improvement from previous requirements. Some may observe that the overall volume of disclosure has increased compared with previous revenue disclosure requirements. However, the boards observed that, to some extent, concerns about the increased volume were the inevitable consequence of addressing the shortcoming in the previous disclosure requirements. In addition, the boards noted that many entities provide voluntary revenue disclosures outside the financial statements and the boards concluded that the increase in disclosure is necessary to improve previous disclosure practices and the usefulness of financial reporting.

Disclosure objective and materiality (paragraphs 110–112)

BC330 The boards decided that, consistently with other recent Standards, IFRS 15 should specify an objective for the revenue disclosures. In the boards’ view, a clear objective improves the interpretation and implementation of the disclosure requirements. This is because a preparer can assess whether the overall quality and informational value of its revenue disclosures are sufficient to meet the stated objectives. The boards also observed that specifying an overall disclosure objective avoids the need for detailed and prescriptive disclosure requirements to accommodate the many and varied types of contracts with customers that are within the scope of IFRS 15.

BC331 The boards also decided to include disclosure requirements to help an entity meet the disclosure objective. However, those disclosures should not be viewed as a checklist of minimum disclosures, because some disclosures may be relevant for some entities or industries but may be irrelevant for others. The boards also observed that it is important for an entity to consider the disclosures together with the disclosure objective and materiality. Consequently, paragraph 111 of IFRS 15 clarifies that an entity need not disclose information that is immaterial.

Contracts with customers

BC332 To provide context for the disclosures, the boards decided to require an entity to disclose the amount of revenue recognised from contracts with customers. The FASB noted that in the absence of a general financial statement presentation standard, it would require an entity to present or disclose the amount of revenue recognised from contracts with customers. However, the IASB noted that the general principles of IAS 1 would apply and, therefore, an entity would need to disclose the amount of revenue recognised from contracts with customers in the notes to the financial statements only if it was not otherwise presented.
In addition to the amount of revenue recognised, the boards also decided to require an entity to disclose impairment losses from contracts with customers (if not presented in the statement of comprehensive income). The boards made this decision as a consequence of their previous decisions not to reflect customer credit risk in the measurement of the transaction price and, therefore, the amount of revenue recognised for transactions that do not include a significant financing component (see paragraphs BC259–BC265). This is reflected in the core principle of IFRS 15 that specifies that an entity recognise revenue at an amount that reflects the consideration to which the entity expects to be entitled.

In the light of those decisions, the boards decided that separately disclosing (or presenting) the impairment losses on contracts with customers provides the most relevant information to users of financial statements.

Disaggregation of revenue (paragraphs 114–115)

Revenue recognised in the statement of comprehensive income is a composite amount arising from many contracts with customers. This is because revenue can arise from the transfer of different goods or services and from contracts that involve different types of customers or markets. Users of financial statements explained that understanding those differences was critical to their analyses. Consequently, the boards decided to require an entity to provide disaggregated revenue information to help users of financial statements understand the composition of the revenue from contracts with customers recognised in the current period.

In developing the requirements for disclosing disaggregated revenue, the boards observed that some previous revenue recognition requirements required revenue to be disaggregated into its significant categories, including revenue arising from goods or services. However, because the most useful disaggregation of revenue depends on various entity-specific or industry-specific factors, the boards decided that IFRS 15 should not prescribe any specific factor to be used as the basis for disaggregating revenue from contracts with customers. Instead, the boards decided to specify in paragraph 114 of IFRS 15 an objective for providing disaggregated information. The boards noted that specifying an objective will result in the most useful information for users of financial statements, because it enables an entity to disaggregate revenue into categories that are meaningful for its business. In addition, specifying an objective should result in disaggregation that is neither too aggregated nor too detailed.

The boards also decided to provide application guidance because of requests for additional guidance about how to implement the objective and, in particular, how to determine the appropriate categories that an entity may use to disaggregate revenue from contracts with customers. The application guidance explains that the most appropriate categories depend on facts and circumstances; however, an entity should consider how revenue is disaggregated in other communications or for the purposes of evaluating financial performance. This is because entities often already disaggregate revenue in those communications and the categories used may be those that are most useful for users of financial statements and that meet the objective in paragraph 114 of IFRS 15. The application guidance also includes a list of examples of categories (for example, geographical region or product type) by
which an entity might disaggregate its revenue. The boards noted that the list of categories was compiled as examples that could be applied to many different entities, industries and contracts. As a result, the list should not be viewed either as a checklist or as an exhaustive list. However, the boards observed that an entity may need to disaggregate by more than one category to meet the objective.

The boards also decided to require that an entity explain the relationship between the disaggregated revenue information required by paragraph 114 of IFRS 15 and the segment information required by IFRS 8 Operating Segments and Topic 280 Segment Reporting. The boards decided this because users of financial statements explained that it is critical to their analyses to understand not only the composition of revenue, but also how that revenue relates to other information provided in segment disclosures such as costs of goods sold, expenses and assets used.

In developing the requirements, the boards also considered whether the current segment reporting requirements in IFRS 8 and Topic 280 provided adequate information for users of financial statements in understanding the composition of revenue. Those requirements require an entity to disaggregate and disclose revenue for each operating segment (reconciled to total revenue). In addition, those requirements also require an entity to disaggregate total revenue by products or services (or by groups of similar products or services) and geographical areas—if the entity’s operating segments are not based on those factors.

However, despite some similarity to segment reporting, the boards decided to require disaggregated revenue information for revenue from contracts with customers in IFRS 15 because some entities are exempt from providing segment disclosures (for example, entities that are not listed on a public stock exchange). Furthermore, the boards observed that segment information might be based on non-GAAP information (i.e., the revenue that is reported to the chief operating decision maker may be recognised and measured on a basis that is not in accordance with IFRS 15). The boards also observed that the objective of providing segment information in accordance with IFRS 8 or Topic 280 is different from the objective for the disaggregation disclosure in IFRS 15 and, therefore, segment revenue disclosures may not always provide users of financial statements with enough information to help them understand the composition of revenue recognised in the period. Nonetheless, the boards clarified in paragraph 112 of IFRS 15 that an entity does not need to provide disaggregated revenue disclosures if the information about revenue provided in accordance with IFRS 8 or Topic 280 meets the requirements specified in paragraph 114 of IFRS 15 and those revenue disclosures are based on the recognition and measurement requirements in IFRS 15.

**Contract balances (paragraphs 116–118)**

Users of financial statements explained that they need to understand the relationship between the revenue recognised in a reporting period and the changes in the balances of the entity’s contract assets and contract liabilities (i.e., contract balances) to assess the nature, amount, timing and uncertainty of revenue and cash flows arising from an entity’s contracts with customers. Those
users of financial statements noted that even though many entities currently recognise working capital balances such as unbilled receivables and deferred revenue, previous revenue recognition requirements did not require adequate disclosure about the relationship between those balances and the amount of revenue recognised. Consequently, the 2010 and the 2011 Exposure Drafts proposed that an entity disclose a reconciliation of the contract asset and the contract liability balances in a tabular format.

However, many preparers strongly opposed any requirements to reconcile the contract asset and the contract liability balances in a tabular format. Those preparers noted that it would be costly to compile and present the information because it was not tracked. Preparers also questioned the usefulness of this reconciliation to users of financial statements, because the information was not used by management. In contrast, users of financial statements reiterated that some of the information in the reconciliation would be useful, including the information about contract liabilities, which would provide greater transparency about future revenues, which is critical to their analyses. However, users of financial statements also acknowledged that the rigid format of the proposed reconciliation had limitations that would have reduced its usefulness. This is because, for example, changes in contract assets and contract liabilities would have been disclosed on an aggregate basis (ie changes in contract assets would have been offset by changes in contract liabilities) and, therefore, the extent of the changes in contract balances (and the reasons for those changes) would have been obscured.

In the discussion at the disclosure and transition workshops in 2012 (see paragraph BC328), preparers agreed that they could provide further information about contract balances that would be useful to users of financial statements. However, to limit the costs of providing that information, those preparers explained that they need greater flexibility in the format of this disclosure. Users of financial statements emphasised that it was critical to them to have information on the movements in the contract balances presented separately because it would help them understand information about the following:

(a) the amount of the opening balance of the contract liability balance that will be recognised as revenue during the period; and
(b) the amount of the opening balance of the contract asset that will be transferred to accounts receivable or collected in cash during the period.

Before addressing concerns about format, the boards considered whether they could address the cost concerns of preparers by limiting the scope of the reconciliation requirements to only contract balances for specific types of contracts (for example, long-term contracts). They did this because many users of financial statements observed that information about contract balances would be particularly important for entities that enter into long-term contracts with customers or that carry significant contract liability balances for other reasons (for example, prepaid service contracts). However, the boards rejected this alternative for the following reasons:
it would have been difficult to clearly identify the types of contracts or industries for which a reconciliation would (or would not) provide useful information.

(b) limiting the scope of the reconciliation would have added complexity. This is because limiting the scope could have resulted in excluding some of an entity’s contract assets and contract liabilities from the reconciliation and, therefore, additional information would have been required to relate the reconciled amounts of contract assets or contract liabilities to those recognised in the statement of financial position.

c) information on contract balances is useful for other contracts, in addition to long-term contracts, because, for example, there may be a number of contracts or businesses that have significant timing differences between payment and performance.

In the light of their decision not to limit the scope of the disclosure, the boards considered whether they could instead modify the format of the disclosure to address the concerns of preparers and users of financial statements. The boards observed that neither users of financial statements nor preparers supported the format proposed in the 2010 and the 2011 Exposure Drafts because users of financial statements were concerned that the information about the movements in the contract balances was too aggregated to be useful and because preparers were concerned about the cost of compliance with such a rigid format. The boards acknowledged that a previously rejected alternative format of a gross reconciliation of contract balances (ie to show the remaining contractual rights and performance obligations in separate columns) would have been inappropriate because it would not respond to preparers’ concerns about costs. This is because the cost of preparing and auditing the gross reconciliation would have been high, and possibly higher than the ‘net’ reconciliation proposed in the 2011 Exposure Draft, because an entity would have been required to measure all unperformed contracts which would have required a high level of judgement.

Consequently, the boards decided that, instead of requiring a tabular reconciliation of the aggregate contract balances, they would require an entity to disclose qualitative and quantitative information about the entity’s contract balances (see paragraphs 116–118 of IFRS 15). This approach balances the needs of users of financial statements with preparers’ concerns because the qualitative and quantitative disclosures provide users of financial statements with the information they requested (ie information on when contract assets are typically transferred to accounts receivable or collected as cash and when contract liabilities are recognised as revenue). In addition, the boards decided that those disclosures would be more cost-effective than a reconciliation. The boards also observed that this approach would not result in a significant change for many entities that are already disclosing similar information. For example, the boards observed that some long-term construction entities already disclosed information relating to balances similar to contract assets and contract liabilities—often referred to as ‘due from customers’ or ‘unbilled accounts receivable’ and ‘due to customers’ or ‘deferred revenue’.
The boards also decided to require that an entity disclose the amount of revenue recognised in the period that relates to amounts allocated to performance obligations that were satisfied (or partially satisfied) in previous periods (for example, as a result of a change in transaction price or estimates related to the constraint on revenue recognised). Disclosing those amounts provides relevant information about the timing of revenue recognition that was not a result of performance in the current period and thus provides useful information about the current period operating results and on predicting future revenues. In addition, the boards noted that this information is not provided elsewhere in the financial statements. Finally, the boards noted that, consistent with general materiality requirements, they did not expect this disclosure to be provided if the amounts are immaterial.

**Disclosure of the transaction price allocated to the remaining performance obligations (paragraphs 120–122)**

Many users of financial statements explained that information about the amount and timing of revenue that the entity expects to recognise from its existing contracts would be useful in their analyses of revenue. They also explained that the information would be most useful for long-term contracts, because those contracts typically have the most significant amounts of unrecognised revenue.

The boards observed that a number of entities often voluntarily disclose information about their long-term contracts, which is commonly referred to as 'backlog' information. (Some entities are also required to produce this information outside the financial statements in regulatory filings.) However, this information is typically presented outside the financial statements and may not be comparable across entities because there is not a common definition of backlog.

In the light of those factors, the boards decided to specify disclosure requirements to capture information about the amount and timing of revenue that an entity expects to recognise from the remaining performance obligations in the entity’s existing contracts. The boards observed that by disclosing that information, an entity would provide users of the entity’s financial statements with additional information about the following:

(a) the amount and expected timing of revenue to be recognised from the remaining performance obligations in existing contracts;

(b) trends relating to the amount and expected timing of revenue to be recognised from the remaining performance obligations in existing contracts;

(c) risks associated with expected future revenue (for example, some observe that revenue is more uncertain if an entity does not expect to satisfy a performance obligation until a much later date); and

(d) the effect of changes in judgements or circumstances on an entity’s revenue.
Many respondents (including most preparers) disagreed with the boards’ decision to require such information to be disclosed in the financial statements. Those respondents highlighted different reasons for their disagreement, as follows:

(a) the disclosure would be difficult and costly to prepare and audit because existing accounting systems are not designed to track and capture the required information, including the information on scheduling the timing of the satisfaction of those remaining performance obligations.

(b) the information provided by the disclosure could be misinterpreted because, depending on the nature of the entity’s business(es), the disclosure may give prominence to only a relatively small subset of the entity’s potential future revenues. In addition, the disclosure may include less information than the entity previously included in its backlog disclosure because future and cancellable executory contracts are excluded from the scope of the disclosure.

(c) the information appeared to be forward-looking in nature and thus should not be presented in the notes to the financial statements.

In redeliberating the disclosure requirements, taking into consideration the feedback received at the disclosure workshops, the boards observed that the requirement to disclose information about remaining performance obligations should not impose significant incremental costs on an entity because the entity is already required by the revenue recognition requirements to determine and allocate the transaction price to the remaining performance obligations. Nonetheless, the boards decided to address preparers’ concerns about costs of preparation as follows:

(a) providing practical expedients to limit the scope of the disclosure (see paragraph 121 of IFRS 15). The boards decided that including the practical expedient in paragraph 121(a) of IFRS 15 would ease the burden for the preparation of the disclosure and yet would not significantly decrease the usefulness of the information for users of financial statements. This is because users indicated that information for remaining performance obligations is most critical to their analyses when the contracts are long-term. In addition, including the practical expedient in paragraph 121(b) of IFRS 15 would maintain the relief provided to an entity in paragraph B16 of IFRS 15 on measuring progress for those performance obligations (ie performance obligations for which the entity has a right to consideration that corresponds directly with its performance completed to date). The boards provided practical expedients rather than specifically limiting the scope because some preparers commented that it would be easier for them to comply with the requirement from an accounting systems and processes perspective if they could choose to include all of their remaining performance obligations in the disclosure.

(b) eliminating the prescriptive approach to disclosing when the entity expects to satisfy its remaining performance obligations (see paragraph 120 of IFRS 15). Initially, the boards proposed that an entity should follow a prescriptive approach in determining when the entity
expects to satisfy its remaining performance obligations (i.e. by requiring a quantitative disclosure of the remaining performance obligations, scheduled into one-year time bands). However, many respondents disagreed with that proposal on the basis that the rigid nature of the prescribed time bands would imply a degree of precision in the timing of revenue recognition that may not exist and, furthermore, would increase the costs of preparation. In response to that feedback, the boards decided to permit an entity to estimate and present such information either on a quantitative basis, with time bands that are most appropriate for the duration of the remaining performance obligations (i.e. not necessarily one-year time bands) or by using qualitative information (or both).

Some users of financial statements also asked for more information to be provided about the relationship between the amounts disclosed as an entity’s remaining performance obligations and the entity’s contract liabilities. (A contract liability arises if an entity receives consideration from a customer before the entity satisfies its performance obligations to the customer.) This is because the amount of the remaining performance obligations for which cash has been received is useful information. However, the boards noted that contract liabilities are a subset of the amounts disclosed as the transaction price allocated to the remaining performance obligations and paragraph 116(a) of IFRS 15 already requires the contract liability balance to be disclosed. Consequently, the boards decided that no further disclosures should be required.

Performance obligations (paragraph 119)

Previous requirements in IFRS and US GAAP require entities to disclose their accounting policies for recognising revenue (see paragraph 10(e) of IAS 1 and the requirements in Topic 235 Notes to Financial Statements). However, users of financial statements suggested that in many cases, an entity provides a ‘boilerplate’ description of the accounting policy adopted without explaining how the accounting policy relates to the contracts that the entity enters into with customers. To address this criticism, paragraph 119 of IFRS 15 requires that an entity disclose information about its performance obligations in contracts with customers. This disclosure complements the accounting policy disclosure requirements in existing Standards by requiring an entity to provide more descriptive information about its performance obligations.

Significant judgements (paragraphs 123–126)

IFRS and US GAAP have general requirements for disclosing significant accounting estimates and judgements made by an entity. Because of the importance placed on revenue by users of financial statements, the boards decided to require specific disclosures about the estimates used and the judgements made in determining the amount and timing of revenue recognition.
Assets recognised from the costs to obtain or fulfil a contract with a customer (paragraphs 127–128)

BC356 The boards decided to require that an entity disclose information about assets that it recognises from the costs to obtain or fulfil a contract, because information about those assets is useful to users. That information will help users of financial statements understand the types of costs that the entity has recognised as assets and how those assets are subsequently amortised or impaired. The boards also decided that this disclosure was necessary to replace some of the previous disclosure requirements that were superseded by IFRS 15.

BC357 The boards decided not to require that information to be provided as a reconciliation because the cost of providing such a rigid disclosure would outweigh the benefit to users. In addition, most users agreed that the disclosure about the assets recognised from the costs to obtain or fulfil a contract did not need to be provided as a reconciliation to provide relevant information. Consequently, the boards decided to require disclosure of only the most critical information about assets recognised from the costs to obtain or fulfil a contract.

Disclosures required for interim financial reports

BC358 The boards observed that in the absence of more specific disclosure requirements for interim financial reports, an entity should apply IAS 34 *Interim Financial Reporting* or Topic 270 *Interim Reporting* to determine the information about revenue from contracts with customers that the entity should disclose in its interim financial reports. Those requirements require, as a general principle, an entity to disclose information about significant changes in its financial position and performance since the end of the last annual reporting period. The boards considered whether to amend IAS 34 and Topic 270 to specify that the entity provide the same quantitative disclosures about revenue in its interim financial reports as those in its annual financial statements.

BC359 Many preparers and other respondents broadly disagreed with the boards’ proposals to make amendments to IAS 34 and Topic 270. They explained that requiring all of the quantitative disclosures in interim financial reports would be too burdensome and difficult to achieve in the short time frames required for interim reporting. In contrast, users of financial statements had mixed views. Some users (including nearly all US-based users) suggested that IAS 34 and Topic 270 should be amended to require the quantitative disclosures because of the importance of revenue and the need to have timely disclosures provided regularly in the interim financial reports. However, other users of financial statements explained that only the information about the disaggregation of revenue was critical to their interim analyses. Those users of financial statements also explained that timeliness in interim reporting was critical and that a requirement to provide other interim disclosures might unnecessarily delay the issuance of interim financial reports.

BC360 The IASB and the FASB reached different decisions on the amendments to IAS 34 and Topic 270. The IASB decided to amend IAS 34 to only add specific requirements that an entity should disclose disaggregated revenue information in interim financial reports. For all other disclosures related to revenue from contracts with customers, the IASB decided that the general principles of IAS 34...
should apply. The IASB decided to add to IAS 34 a requirement to disclose disaggregated revenue information because users of financial statements explained that disaggregation was critical to their analyses and because the information is typically already provided in interim financial statements; therefore, the requirement should not result in an entity incurring significant incremental costs. Furthermore, the general principle of IAS 34 to disclose information about an entity’s significant changes in financial position and performance should provide users of financial statements with the other information they need about revenue at an interim reporting period. The IASB decided not to make further changes to IAS 34 without a more comprehensive review of the role of disclosure in interim financial reporting.

BC361 The FASB decided to amend Topic 270 to require the same quantitative disclosures about revenue in its interim financial reports as those in its annual financial statements (excluding the cost disclosures). The FASB noted that it is helpful to provide entities with certainty about the information that should be provided in interim financial reports. In addition, the FASB observed that an entity would be compiling most of the information required for the disclosures on an interim basis for the purposes of revenue recognition, and therefore disclosing that information might not result in a significant amount of incremental costs. The FASB also observed that this information is useful to users of financial statements in assessing an entity’s current and future financial performance.

Application guidance (paragraphs B2–B89)

BC362 The boards decided to include application guidance to clarify how the principles in IFRS 15 should be applied, including how those principles should be applied to features found in a number of typical contracts with customers. Some of that application guidance has been included based on previous requirements in IFRS or US GAAP that arose as a result of entities requesting clarification in more complex areas of revenue recognition. However, to be consistent with the objective of developing a single revenue recognition model, the boards did not provide requirements that would have applied only to specific industries (see paragraphs BC2–BC3).

Sale with a right of return (paragraphs B20–B27)

BC363 In some contracts, an entity transfers a good to a customer and also grants the customer the right to return it. The boards decided that, conceptually, a contract with a right of return includes at least two performance obligations—a performance obligation to provide the good to the customer and a performance obligation for the return right service, which is a stand-ready obligation to accept the goods returned by the customer during the return period.

BC364 In relation to performance obligations to provide customers with goods, the boards decided that, in effect, an entity has made an uncertain number of sales. This is because it is only after the return right expires that the entity will know with certainty how many sales it has made (ie how many sales did not fail). Consequently, the boards decided that an entity should not recognise revenue
for the sales that are expected to fail as a result of customers exercising their return rights. Instead, the entity should recognise a liability for its obligation to refund amounts to customers.

BC365 The boards decided that in determining the amount of revenue to recognise (ie the amount of the refund obligation), an entity should use the principles for recognising and measuring variable consideration. Using those principles, an entity would recognise revenue only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the right of return is subsequently resolved. When the entity determines that it cannot recognise all of the consideration received as revenue for the sale of goods with a right of return, the entity would recognise some of the consideration received as a refund liability.

BC366 The boards considered whether to account for the return right service as a performance obligation, in addition to any refund liability that is recognised. If an entity does not recognise a performance obligation for the return right service, it should recognise all of the revenue and margin in the contract once the customer obtains control of the good. That outcome might not faithfully depict the entity’s performance under the contract. However, the boards noted that accounting for the return right service as a performance obligation, in addition to the refund liability, would typically require the entity to estimate the stand-alone selling price of that service. Because, in many cases, the number of returns is expected to be only a small percentage of the total sales and the return period is often short (such as 30 days), the boards decided that the incremental information provided to users of financial statements by accounting for the return right service as a performance obligation would not have justified the complexities and costs of doing so. Consequently, the boards decided that the return right service should not be accounted for as a performance obligation.

BC367 A return right gives an entity a contractual right to recover the good from a customer if the customer exercises its option to return the good and obtain a refund. The boards decided that the right to recover the good should be recognised as an asset rather than offset against the refund liability. The boards observed that recognising the asset separately from the refund liability provides greater transparency and ensures that the asset is considered for impairment testing.

Warranties (paragraphs B28–B33)

BC368 When an entity sells a product (whether that product is a good or service) to a customer, the entity may also provide the customer with a warranty on that product. The warranty might be described as, for example, a manufacturer’s warranty, a standard warranty or an extended warranty. The boards decided to provide specific requirements for applying the revenue recognition model to warranties, because many contracts with customers for the sale of products include a warranty and the nature of that warranty may vary across products, entities and jurisdictions.

BC369 In the Discussion Paper, the boards proposed accounting for all warranties consistently because a unifying feature of all warranties is that an entity
promises to stand ready to replace or repair the product in accordance with the
terms and conditions of the warranty. The Discussion Paper proposed that a
promise to stand ready would provide a customer with a service of warranty
coverage, which would have been a performance obligation to which revenue
would be attributed. However, most respondents to the Discussion Paper stated
that the accounting for warranties should reflect the fact that some product
warranties are different from others. Some warranties protect the customer
from defects that exist when the product is transferred to the customer and
other warranties protect the customer from faults that arise after the product
has been transferred to the customer. Those respondents commented that the
customer does not receive a separate service if the warranty only protects the
customer from the product defects that were present at the time of sale.
Consequently, any subsequent repairs or replacements to remedy those defects
are additional costs of providing the product and, therefore, relate to an entity’s
past performance.

In the light of that feedback, the boards decided to account for some warranties
differently from others. The boards considered distinguishing warranties on the
basis of when the fault in the products arises; however, respondents explained
that such a distinction was not operational. Therefore, the boards decided to
distinguish warranties on the basis of whether the warranty provides the
customer with a service in addition to the assurance that the related product
complies with the agreed-upon specifications. Specifically, the boards decided
that when the warranty provides a service (ie a service-type warranty), the
warranty should be accounted for as a performance obligation.

**Warranties that are performance obligations (service-type
warranties)**

For some types of warranties, an entity either sells separately or negotiates
separately with a customer so that the customer can choose whether to purchase
the warranty coverage. That fact provides objective evidence that the promised
warranty provides a service to the customer in addition to the promised product.
Consequently, the boards decided that this type of promised warranty is a
performance obligation in accordance with paragraphs 22–30 of IFRS 15.

The boards decided that warranties that are not sold separately by the entity, or
negotiated separately with the customer, should also be identified as
performance obligations if the facts and circumstances suggest that the
warranty (or a part of the warranty) provides a service to the customer, in
addition to the assurance that the entity’s past performance was as specified in
the contract. The boards noted the following about this decision:

(a) it provides a clear principle that allows an entity to account for
economically similar warranties in a similar manner, regardless of
whether the warranties are separately priced or negotiated;

(b) it is consistent with the general principles for identifying performance
obligations; and

(c) it removes the bright line in previous US GAAP that distinguishes
between different types of warranties based solely on whether the
warranty is separately priced.
A warranty that meets the requirements in paragraphs B28–B33 of IFRS 15 to be accounted for as a performance obligation might also meet the criteria for classification as an insurance contract. However, only warranties issued directly by a third party would be accounted for as insurance contracts according to the proposals in the boards’ respective projects on the accounting for insurance contracts.

**Warranties that are not performance obligations (assurance-type warranties)**

The boards considered whether an assurance-type warranty should be accounted for as either of the following:

(a) a separate liability to replace or repair a defective product; or

(b) an unsatisfied performance obligation, because the entity has not provided the customer with a product that is free from defects at the time of sale.

The proposals in the 2010 Exposure Draft would have required an entity that provides an assurance-type warranty to a customer to assess whether it had satisfied its performance obligation to transfer the product specified in the contract. The entity would have been required to determine the likelihood of the existence of defective products that it had sold to customers and their quantity and, as a consequence, not recognise revenue to the extent that those performance obligations were not satisfied. An advantage of that proposal would have been that an entity would not have recognised the entire transaction price as revenue when the product transferred to the customer, because a portion of the transaction price would not have been recognised as revenue until the entity had repaired or replaced the products that were expected to be defective. However, the boards decided not to retain that proposal, mainly for the following practical reasons:

(a) there would have been complexities associated with the requirements for an entity to continue to recognise as ‘inventory’ products that had been delivered to customers and that were expected to be defective; and

(b) any margin attributable to the repair or replacement of a product in an assurance-type warranty would have been unlikely to significantly distort the pattern of recognition of the overall contract margin.

Accordingly, the boards decided that an entity should recognise an assurance-type warranty as a separate liability to replace or repair a defective product. Consequently, an entity should recognise a warranty liability and corresponding expense when it transfers the product to the customer and the liability should be measured in accordance with IAS 37 or Topic 460 Guarantees. In contrast to the accounting for service-type warranties, an entity should not attribute any of the transaction price (and therefore revenue) to an assurance-type warranty. Some warranties may include both assurance features and service features. The boards decided that if an entity cannot reasonably account for those assurance features of the warranty separately from the service features, the entity should be allowed to account for the warranties together as a single performance obligation. That accounting ensures that the entity does not
overstate the recognition of revenue at the time that the product transfers to the customer and also relieves the entity from identifying and accounting separately for the two components of the warranty coverage.

**Statutory warranties**

In some jurisdictions, the law requires an entity to provide warranties with the sale of its products. The law might state that an entity is required to repair or replace products that develop faults within a specified period from the time of sale. Consequently, those statutory warranties may appear to be service-type warranties because they cover faults arising after the time of sale, not merely defects existing at the time of sale. However, the boards decided that the law can be viewed as simply operationalising an assurance-type warranty. In other words, the objective of those statutory warranties is to protect the customer against the risk of purchasing a defective product. But rather than requiring the entity to determine whether the product was defective at the time of sale, the law presumes that if a fault arises within a specified period (which can vary depending on the nature of the product), the product was defective at the time of sale. Consequently, these statutory warranties should be accounted for as assurance-type warranties.

**Product liability laws**

The boards clarified that product liability laws do not give rise to performance obligations. Those laws typically require an entity to pay compensation if one of its products causes harm or damage. The boards noted that an entity should not recognise a performance obligation arising from those laws because the performance obligation in a contract is to transfer the product to the customer. To the extent that an entity expects the product(s) to be defective, the entity should recognise a liability for the expected costs to repair or replace the product (see paragraph B33 of IFRS 15). Any obligation of the entity to pay compensation for the damage or harm that its product causes is separate from the performance obligation. The boards noted that an entity should account for this obligation separately from the contract with the customer and in accordance with the requirements for loss contingencies in IAS 37 or Topic 450.

**Principal versus agent considerations**

(Paragraphs B34–B38)

Previous revenue Standards required an entity to assess whether it was acting as a principal or an agent when goods or services were transferred to a customer. That assessment was necessary to determine whether an entity should recognise revenue for the gross amount of customer consideration (if the entity was determined to be a principal) or for a net amount after the supplier was compensated for its goods or services (if the entity was determined to be an agent).

IFRS 15 also requires an entity to determine whether it is a principal or an agent. This is because the performance obligations of principals and agents are different. A principal controls the goods or services before they are transferred to a customer. Consequently, the principal’s performance obligation is to transfer those goods or services to the customer. Therefore, recognising revenue...
at the gross amount of the customer consideration faithfully depicts the
consideration to which the entity is entitled for the transfer of the goods and
services. In contrast, an agent does not control the goods or services before they
are transferred to a customer. The agent merely facilitates the sale of goods or
services between a principal and the customer. Consequently, an agent’s
performance obligation is to arrange for another party to provide the goods or
services to the customer. Therefore, the transaction price attributable to an
agent’s performance obligation is the fee or commission that the agent receives
for providing those services.

BC381 The boards observed that identifying an entity’s promise (ie the performance
obligation) in a contract is fundamental to the determination of whether the
entity is acting as a principal or an agent. This is because identifying the nature
of the entity’s performance obligation is necessary for the entity to determine
whether it controls the goods or services that have been promised before they
are transferred to a customer. For example, a travel agent could be the principal
in some contracts with customers if the travel agent determines that its promise
is to provide a right to a flight (ie a ticket), instead of a promise to provide the
flight. However, to conclude whether they are a principal or an agent, the travel
agent would need to also consider whether it controlled that right before
transferring it to the customer, which may occur when the travel agent
purchases the tickets in advance for sales to future customers.

BC382 The nature of the entity’s promise may not always be readily apparent. For that
reason, the boards included indicators in paragraph B37 of IFRS 15 to help an
entity determine whether the entity controls the goods or services before
transferring them and thus whether the entity is a principal or an agent. Those
indicators are based on indicators that were included in previous revenue
recognition requirements in IFRS and US GAAP. However, as noted in
paragraph BC380, the indicators in IFRS 15 have a different purpose than
previous revenue recognition requirements in that they are based on the
concepts of identifying performance obligations and the transfer of control of
goods or services.

BC383 After an entity identifies its promise and determines whether it is the principal
or the agent, the entity would recognise revenue when it satisfies its
performance obligation. This would occur when control of the promised goods
or services transfers to the customer. The boards observed that in some
contracts in which the entity is the agent, control of the goods or services
promised by the agent might transfer before the customer receives the goods or
services from the principal. For example, an entity might satisfy its promise to
provide customers with loyalty points when those points are transferred to the
customer if:

(a) the entity’s promise is to provide loyalty points to customers when the
customer purchases goods or services from the entity;

(b) the points entitle the customers to future discounted purchases with
another party (ie the points represent a material right to a future
discount); and
(c) the entity determines that it is an agent (ie its promise is to arrange for the customers to be provided with points) and the entity does not control those points before they are transferred to the customer.

BC384 In contrast, the boards observed that if the points entitle the customers to future goods or services to be provided by the entity, the entity may conclude it is not an agent. This is because the entity’s promise is to provide those future goods or services and thus the entity controls both the points and the future goods or services before they are transferred to the customer. In these cases, the entity’s performance obligation may only be satisfied when the future goods or services are provided.

BC385 In other cases, the points may entitle customers to choose between future goods or services provided by either the entity or another party. The boards observed that in those cases, to determine when the performance obligation is satisfied, the entity would need to consider the nature of its performance obligation. This is because until the customer has chosen the goods or services to be provided (and thus whether the entity or the third party will provide those goods or services), the entity is obliged to stand ready to deliver goods or services. Thus, the entity may not satisfy its performance obligation until such time as it either delivers the goods or services or is no longer obliged to stand ready. The boards also observed that if the customer subsequently chooses the goods or services from another party, the entity would need to consider whether it was acting as an agent and thus should recognise revenue for only a fee or commission that the entity received from providing the services to the customer and the third party. The boards noted that this is consistent with previous revenue recognition requirements in IFRS for customer loyalty programmes.

Customer options for additional goods or services (paragraphs B39–B43)

BC386 In some contracts, customers are given an option to purchase additional goods or services. The boards considered when those options should be accounted for as a performance obligation. During those discussions, the boards observed that it can be difficult to distinguish between the following:

(a) an option that the customer pays for (often implicitly) as part of an existing contract, which would be a performance obligation to which part of the transaction price is allocated; and

(b) a marketing or promotional offer that the customer did not pay for and, although made at the time of entering into a contract, is not part of the contract and that would not be a performance obligation in that contract.

BC387 Similar difficulties in distinguishing between an option and an offer have arisen in US GAAP for the software industry. Previous US GAAP revenue recognition requirements for the software industry specified that an offer of a discount on future purchases of goods or services was presumed to be a separate option in the contract, if that discount was significant and also incremental both to the range of discounts reflected in the pricing of other elements in that contract and to the range of discounts typically given in comparable transactions. Those notions of ‘significant’ and ‘incremental’ form the basis for the principle of a
material right that is used to differentiate between an option and a marketing or promotional offer. However, the boards observed that even if the offered discount is not incremental to other discounts in the contract, it nonetheless could, in some cases, give rise to a material right to the customer. Consequently, the boards decided not to carry forward that part of the previous revenue recognition requirements from US GAAP into IFRS 15.

Some respondents asked the boards to clarify whether specific options, such as customer loyalty points, should be accounted for as a performance obligation when the arrangement involves more than two parties. This often occurs in a credit card arrangement in which an entity provides the credit card holder with points based on the amount of purchases made at other entities (often referred to as ‘merchants’). The boards determined that the assessment of whether any loyalty points represent a performance obligation requires an analysis of the facts and circumstances in each arrangement. The boards decided not to provide any further guidance because the issue was specific to the credit card industry and the boards observed that these arrangements are often complex and can vary significantly. Furthermore, the boards noted that IFRS 15 includes all the requirements to enable entities to account for the various arrangements.

Allocating the transaction price

In accordance with IFRS 15, an entity is required to determine the stand-alone selling price of the option so that it can allocate part of the transaction price to that performance obligation. In some cases, the stand-alone selling price of the option may be directly observable. In many cases though, the stand-alone selling price of the option will need to be estimated.

Option pricing models can be used to estimate the stand-alone selling price of an option. The price of an option includes the intrinsic value of the option (ie the value of the option if it were exercised today) and its time value (ie the value of the option that depends on the time until the expiry and the volatility of the price of the underlying goods or services). The boards decided that the benefits to users of financial statements of allocating some of the transaction price to the price and availability guarantees inherent in the time value component of the option price would not have justified the costs and difficulties to do so. However, the boards decided that an entity should be able to readily obtain the inputs necessary to measure the intrinsic value of the option in accordance with paragraph B42 of IFRS 15 and that those calculations should be relatively straightforward and intuitive. This measurement approach is consistent with the application guidance that was provided for measuring customer loyalty points in previous revenue recognition requirements in IFRS.

Renewal options

A renewal option gives a customer the right to acquire additional goods or services of the same type as those supplied under an existing contract. This type of option could be described as a renewal option within a relatively short contract (for example, a one-year contract with an option to renew that contract for a further year at the end of the first and second years) or a cancellation option within a longer contract (for example, a three-year contract that allows the customer to discontinue the contract at the end of each year). A renewal
option could be viewed similarly to other options to provide additional goods or services. In other words, the renewal option could be a performance obligation in the contract if it provides the customer with a material right that it otherwise could not obtain without entering into that contract.

However, there are typically a series of options in cases in which a renewal option provides a customer with a material right. In other words, to exercise any option in the contract, the customer must have exercised all the previous options in the contract. The boards decided that determining the stand-alone selling price of a series of options would have been complex because doing so would have required an entity to identify various inputs, such as the stand-alone selling prices for the goods or services for each renewal period and the likelihood that the customers will renew for the subsequent period. In other words, the entity would have had to consider the entire potential term of the contract to determine the amount of the transaction price from the initial period that should be deferred until later periods.

For that reason, the boards decided to provide an entity with a practical alternative to estimating the stand-alone selling price of the option. The practical alternative requires an entity to include the optional goods or services that it expects to provide (and corresponding expected customer consideration) in the initial measurement of the transaction price. In the boards’ view, it is simpler for an entity to view a contract with renewal options as a contract for its expected term (i.e., including the expected renewal periods) rather than as a contract with a series of options.

The boards developed two criteria to distinguish renewal options from other options to acquire additional goods or services. The first criterion specifies that the additional goods or services underlying the renewal options must be similar to those provided under the initial contract—that is, an entity continues to provide what it was already providing. Consequently, it is more intuitive to view the goods or services underlying such options as part of the initial contract. In contrast, customer loyalty points and many discount vouchers should be considered to be separate deliverables in the contract, because the underlying goods or services may be of a different nature.

The second criterion specifies that the additional goods or services in the subsequent contracts must be provided in accordance with the terms of the original contract. Consequently, the entity’s position is restricted because it cannot change those terms and conditions and, in particular, it cannot change the pricing of the additional goods or services beyond the parameters specified in the original contract. That too is different from examples such as customer loyalty points and discount vouchers. For example, if an airline offers flights to customers in exchange for points from its frequent flyer programme, the airline is not restricted, because it can subsequently determine the number of points that are required to be redeemed for any particular flight. Similarly, when an entity grants discount vouchers, it has typically not restricted itself with respect to the price of the subsequent goods or services against which the discount vouchers will be redeemed.
Customers’ unexercised rights (breakage) (paragraphs B44–B47)

Some respondents asked the boards to provide guidance on how to account for a customer’s non-refundable prepayment for the right to receive goods or services in the future. Common examples include the purchase of gift cards and non-refundable tickets.

The boards noted that the requirements for the allocation of the transaction price to customer options implicitly explains how to account for situations in which the customer does not exercise all of its contractual rights to those goods or services (ie breakage). However, the boards decided to clarify how to account for breakage in situations in which there is only one performance obligation in the contract (ie how to account for breakage in customer options when there is no need to allocate the transaction price and, therefore, no need to determine a stand-alone selling price).

Consequently, the boards included application guidance on the accounting for breakage. Those requirements require the same pattern of revenue recognition as the requirements for customer options. Thus, an entity should recognise revenue from breakage as it performs under the contract on the basis of the transfer of the goods or services promised in the contract. This effectively increases the transaction price allocated to the individual goods or services transferred to the customer to include the revenue from the entity’s estimate of unexercised rights. The boards decided that this approach represents the most appropriate pattern of revenue recognition for breakage, because if an entity expected that customers would exercise all of their rights (ie if the entity did not expect any breakage), it might increase the price of its goods or services. For example, an airline that sells non-refundable tickets would presumably charge a higher price per ticket if there was no expectation of breakage.

The boards also decided that an entity should recognise revenue for breakage only if it is highly probable that doing so would not result in a subsequent significant revenue reversal (see paragraphs 56–58 of IFRS 15). Otherwise, the entity’s performance obligation to stand ready to provide future goods or services could be understated.

The boards considered but rejected an approach that would have required an entity to recognise estimated breakage as revenue immediately on the receipt of prepayment from a customer. The boards decided that because the entity has not performed under the contract, recognising revenue would not have been a faithful depiction of the entity’s performance and could also have understated its obligation to stand ready to provide future goods or services.

Some respondents questioned whether the accounting for breakage is consistent with that for customer options in IFRS 15. Those respondents explained that for customer options, breakage is taken into account when determining the stand-alone selling price of the option as required by paragraph B42 of IFRS 15. Therefore, those respondents were concerned that when the consideration is allocated between the option and another performance obligation, some of the breakage on the option would be recognised when the other performance obligation is satisfied, which could occur before any rights under the options are
exercised by the customer. However, the boards observed that when there are two (or more) performance obligations, IFRS 15 requires an entity to allocate the overall consideration between the performance obligations based on their relative stand-alone selling prices and, therefore, any discount on the combined bundle of goods or services is allocated on that basis (unless the entity meets the requirements in paragraph 82 or 85 of IFRS 15 to allocate on another basis). In other words, any difference between the sum of the stand-alone selling prices of the option and the other promised goods or services compared with the overall consideration would be recognised when (or as) the entity transfers the goods or services promised in the contract, which is consistent with the pattern of revenue recognition for breakage when there is only one performance obligation.

**Licensing (paragraphs B52–B63)**

BC402 In the 2011 Exposure Draft, the boards proposed that a licence grants a customer a right to use, but not own, intellectual property of the entity. Consequently, the 2011 Exposure Draft viewed the nature of the promised asset in a licence as a right to use an intangible asset that is transferred at a point in time. This is because the boards’ view at that time was that there is a point at which the customer obtains the ability to direct the use of, and obtain substantially all of the benefits from, the right to use the intellectual property. However, the 2011 Exposure Draft also explained that revenue may be recognised over time for some contracts that include a licence if that licence is not distinct from other promises in the contract that may transfer to the customer over time.

BC403 In the light of the feedback received on the 2011 Exposure Draft, the boards reconsidered whether the nature of the promised asset in a licence is always a right that transfers at a point in time. In the examples they considered, the boards observed that licences vary significantly and include a wide array of different features and economic characteristics, which lead to significant differences in the rights provided by a licence. In some of the examples, the boards observed that the customer might be viewed as not obtaining control of the licence at a point in time. This is because the intellectual property to which the customer has obtained rights is dynamic and will change as a result of the entity’s continuing involvement in its intellectual property, including activities that affect that intellectual property. In those cases, the customer may not be able to direct the use of, and obtain substantially all of the remaining benefits from, the licence at the time of transfer. In other words, what the licence provides to the customer is access to the intellectual property in the form in which it exists at any given moment. (Those notions were supported by some respondents who opposed the proposal in the 2011 Exposure Draft that all distinct licences represent the transfer of a right to use an intangible asset.)

BC404 Consequently, the boards decided to specify criteria for determining whether the nature of the entity’s promise in granting a licence is to provide a customer with a right to access the entity’s intellectual property as it exists throughout the licence period, or a right to use the entity’s intellectual property as it exists at a point in time when the licence is granted. The boards noted that these criteria were necessary to distinguish between the two types of licences, rather than strictly relying on the control requirements, because it is difficult to assess
when the customer obtains control of assets in a licence without first identifying the nature of the entity’s performance obligation.

However, the boards observed that before applying the criteria, an entity should assess the goods or services promised in the contract and identify, as performance obligations, the promises that transfer the goods or services to the customer.

**Identifying the performance obligations**

The boards observed that, as is the case with other contracts, contracts that include a licence require an assessment of the promises in the contract and the criteria for identifying performance obligations (see paragraphs 27–30 of IFRS 15). This would include an assessment of whether the customer can benefit from the licence on its own or together with other resources that are readily available (see paragraph 27(a) of IFRS 15) and whether the licence is separately identifiable from other goods or services in the contract (see paragraph 27(b) of IFRS 15). The boards observed that this assessment may sometimes be challenging because the customer can often obtain benefit from the licence on its own (i.e., the licence is capable of being distinct). However, in many cases, the customer can benefit from the licence only with another good or service that is also promised (explicitly or implicitly) in the contract; therefore, the licence is not separately identifiable from other goods or services in the contract. This may occur when:

(a) a licence forms a component of a tangible good and is integral to the good’s functionality—software (i.e., a licence) is often included in tangible goods (for example, a car) and in most cases, significantly affects how that good functions. In those cases, the customer cannot benefit from the licence on its own (see paragraph 27(a) of IFRS 15) because the licence is integrated into the good (see paragraph 29(a) of IFRS 15); that is, the licence is an input to produce that good, which is an output.

(b) a licence that the customer can benefit from only in conjunction with a related service—this may occur when an entity provides a service, such as in some hosting or storage services, that enables the customer to use a licence, such as software, only by accessing the entity’s infrastructure. In those cases, the customer does not take control of the licence and, therefore, cannot benefit from (or use) the licence on its own (see paragraph 27(a) of IFRS 15) without the hosting service. In addition, the use of the licence is highly dependent on, or highly interrelated with, the hosting service (see paragraph 29(c) of IFRS 15).

If the customer cannot benefit from the licence on its own, and/or the licence cannot be separated from other promises in the contract, the licence would not be distinct and thus would be combined with those other promises (see paragraph 30 of IFRS 15). The entity would then determine when the single performance obligation is satisfied on the basis of when the good or service (i.e., the output) is transferred to the customer. The boards noted that in some cases the combined good or service transferred to the customer may have a licence as its primary or dominant component. When the output that is transferred is a licence or when the licence is distinct, the entity would apply the criteria in...
paragraph B58 of IFRS 15 to determine whether the promised licence provides the customer with access to the entity’s intellectual property or a right to use the entity’s intellectual property.

**Developing the criteria for licences that provide a right to access**

As noted in paragraph BC404, the boards decided to specify criteria in paragraph B58 of IFRS 15 for determining if the intellectual property will change and, thus, if a licence provides a customer with a right to access the entity’s intellectual property. If those criteria are not met, the licence provides the customer with a right to use an entity’s intellectual property as that intellectual property exists (in the form and with the functionality) at the point in time when the licence transfers to the customer. To ensure that all licences are accounted for as either a right of access or a right to use, the boards decided to specify criteria for only one type of licence. In determining for which type of licence they should develop criteria, the boards observed that it was easier to determine when the intellectual property to which the customer has rights was changing (ie was dynamic), rather than when it was static.

In developing the criteria, the boards observed that the main factor that results in the intellectual property changing is when the contract requires, or the customer reasonably expects, that the entity undertakes activities that do not directly transfer goods or services to a customer (ie they do not meet the definition of a performance obligation). The activities may be part of an entity’s ongoing and ordinary activities and customary business practices. However, the boards noted that it was not enough that the entity undertook activities, but also that those activities affected the intellectual property to which the customer has rights and, thus, exposes the customer to positive or negative effects. In those cases, the customer will essentially be using the most recent form of the intellectual property throughout the licence period. The boards observed that when the activities do not affect the customer, the entity is merely changing its own asset, which, although it may affect the entity’s ability to provide future licences, would not affect the determination of what the licence provides or what the customer controls.

The boards noted that the assessment of the criteria would not be affected by other promises in the contract to transfer goods or services (ie performance obligations) that are separate from the licence. This is because the nature and pattern of transfer of each (separate) performance obligation in a contract would not affect the timing of other promised goods or services in the contract and, thus, would not affect the identification of the rights provided by the licence. This is because, by definition, a performance obligation is separate from the other promises in the contract. Consider a contract to provide a car and ongoing maintenance services—that is, two distinct goods or services (and thus two separate performance obligations). In this case, it seems counterintuitive to include the promise to provide a (separate) maintenance service when determining the nature and timing of the entity’s performance related to the transfer of the car. A similar example can be drawn from a contract that includes a software licence and a promise to provide a service of updating the customer’s software (sometimes included in a contract as post-contract support), in which the post-contract support is identified as a distinct good or service.
This is because the entity would not consider the post-contract support when determining when control of the software transfers to the customer. In other words, a promise to transfer separate updates to the licence would not be considered in the assessment of the criteria in paragraph B58 of IFRS 15 and, furthermore, would be specifically excluded by criterion (c) in that paragraph.

The boards also noted that an entity would exclude the factors specified in paragraph B62 of IFRS 15 for the following reasons:

(a) restrictions of time, geographical region or use that define the attributes of the asset conveyed in a licence—an entity would not consider restrictions of time, geographical region or use, because they define attributes of the rights transferred rather than the nature of the underlying intellectual property and the rights provided by the licence. Consider, for example, a term licence that permits the customer to show a movie in its theatre six times over the next two years. The restrictions in that example determine the nature of the asset that the entity has obtained (i.e., six showings of the movie), rather than the nature of the underlying intellectual property (i.e., the underlying movie).

(b) guarantees provided by the entity that it has a valid patent to intellectual property and that it will defend and maintain that patent—guarantees that the entity has a valid patent would not be included in the assessment of the criteria for determining the rights provided in a licence, because those promises are part of the entity’s representation that the intellectual property is legal and valid (this notion was previously included in the 2011 Exposure Draft).

In developing the criteria, the boards considered, but rejected, differentiating licences based on the following factors:

(a) term of the licence—the length of a licence term is a restriction that represents an attribute of the asset transferred and does not provide information on the nature of the underlying intellectual property or on the nature of the entity’s promise. For those reasons, the licence term does not depict when a customer obtains control of the promised licence.

(b) exclusivity—the 2010 Exposure Draft proposed to distinguish between licences (i.e., whether they were a performance obligation satisfied over time or at a point in time) on the basis of whether the licence was exclusive. Many respondents to the 2010 Exposure Draft explained that a distinction based on exclusivity was inconsistent with the control principle, because exclusivity does not affect the determination of the entity’s performance. In addition, respondents stated that a distinction based on exclusivity would not be operational, because it would require the boards to provide more clarity on how the term ‘exclusive’ would be interpreted. The boards observed that exclusivity is another restriction that represents an attribute of the asset transferred, rather than the nature of the underlying intellectual property or the entity’s promise in granting a licence.
...consumption of the underlying intellectual property—the boards also considered but rejected an approach that would differentiate between licences on the basis of the amount of the underlying intellectual property that was used up, or consumed by, a licence. This is because the intellectual property can be divided in many ways such as by time, geographical region or other restriction on use, and the rights can be provided to more than one customer at the same time through different licences. Consequently, it would be difficult for an entity to determine how much of the intellectual property was consumed by a particular licence.

(d) payment terms—the boards decided not to use payment terms to differentiate between licences. This is because payment terms are not indicative of whether the licence provides the customer with a right to access or right to use the intellectual property of the entity and thus when the performance obligation is satisfied. Instead, payment terms will be agreed by the customer and the entity and will reflect other economic factors such as credit risk and potential cash flows of the asset.

The boards also considered whether to include a criterion that differentiated the nature of an entity’s promise when the promised consideration is dependent on the customer’s sales from, or usage of, the licence (often referred to as a sales-based or a usage-based royalty). As a criterion for differentiating licences, this would have resulted in all of the promised consideration being recognised over time for such licences, including any fixed amount. The boards decided not to include royalties as a criterion for differentiating licences, because the existence of a sales-based or a usage-based royalty does not solely define performance over time. However, the boards observed that, in some cases, the existence of a sales-based or a usage-based royalty can indicate a ‘shared economic interest’ between the entity and the customer in the intellectual property being licensed and therefore the customer could reasonably expect that the entity will undertake activities that affect the intellectual property to which the licence relates. The boards also decided, however, to include an exception for the revenue recognition pattern of sales-based or usage-based royalties (see paragraphs BC415–BC421).

**When is the performance obligation satisfied?**

The boards observed that when the licence provides the customer with access to the entity’s intellectual property, the promised licence represents a performance obligation satisfied over time because the customer will simultaneously receive and benefit from the entity’s performance as the performance occurs—that is, the criterion in paragraph 35(a) of IFRS 15 will be met. However, when the licence provides the customer with a right to the entity’s intellectual property, the boards decided that the performance obligation will be satisfied at a point in time. In those cases, an entity would need to assess the point in time at which the performance obligation is satisfied (ie when the customer obtains control of the licence) by applying paragraph 38 of IFRS 15. The boards also decided to specify that control of a licence could not transfer before the beginning of the period during which the customer can use and benefit from the licenced property. If the customer cannot use and benefit from the licenced property...
then, by definition, it does not control the licence. The boards noted that when viewed from the entity’s perspective, performance may appear to be complete when a licence has been provided to the customer, even if the customer cannot yet use that licence. However, the boards observed that the definition of control in paragraph 33 of IFRS 15 focuses on the customer’s perspective, as explained in paragraph BC121.

**Consideration in the form of sales-based or usage-based royalties**

BC415 The boards decided that for a licence of intellectual property for which the consideration is based on the customer’s subsequent sales or usage, an entity should not recognise any revenue for the variable amounts until the uncertainty is resolved (ie when a customer’s subsequent sales or usage occurs). The boards had proposed a similar requirement in the 2011 Exposure Draft because both users and preparers of financial statements indicated that it would not be useful for an entity to recognise a minimum amount of revenue for those contracts. This is because that approach would inevitably have required the entity to report, throughout the life of the contract, significant adjustments to the amount of revenue recognised at inception of the contract as a result of changes in circumstances, even though those changes in circumstances are not related to the entity’s performance. The boards observed that this would not result in relevant information, particularly in contracts in which the sales-based or usage-based royalty is paid over a long period of time.

BC416 In redeliberating the 2011 Exposure Draft, the boards observed that because the restriction for a sales-based or usage-based royalty on a licence of intellectual property was structured to apply to only a particular type of transaction, other economically similar types of transactions might be accounted for differently. For example, the restriction would not apply to tangible goods that include a significant amount of intellectual property and, instead, any variable consideration to which the entity is entitled in exchange for those tangible goods would be considered under the general requirements for constraining estimates of variable consideration. Some respondents questioned the conceptual rationale for including a restriction that could in some cases result in an outcome that was not consistent with the requirement to recognise some or all of an estimate of variable consideration. Others asked whether they could apply the restriction by analogy if the promised good or service had characteristics similar to a licence of intellectual property and the consideration depended on the customer’s future actions. Consequently, the boards considered whether they should do either of the following:

(a) expand the scope of paragraph B63 of IFRS 15 to constrain all estimates of variable consideration when that consideration depends on the customer’s future actions; or

(b) develop a general principle that could be applied to all contracts that would achieve broadly the same outcomes.

**Expand the scope**

BC417 The boards considered whether to expand the restriction for a sales-based or usage-based royalty on a licence of intellectual property, whereby revenue recognition would be constrained to zero for any performance obligation when
the amount that an entity is entitled to is based on a customer’s future actions. However, the boards decided not to introduce this principle into IFRS 15. This is because it would have prevented an entity from recognising any revenue when the goods and services were transferred in cases in which the entity could estimate the variable consideration and meet the objective of constraining estimates of variable consideration.

BC418 The boards also observed that expanding the scope to constrain revenue when consideration is based on the customer’s future actions would also have increased complexity. It would have required the boards to create another exception to maintain the requirements for accounting for customer rights of return, which also results in consideration that is dependent on the customer’s future actions.

Develop a general principle

BC419 The boards also considered whether the restriction for a sales-based or usage-based royalty on a licence of intellectual property could be incorporated into a general principle. The boards considered various ways of articulating this principle, including doing so on the basis of the timing of satisfaction of a performance obligation—that is, whether the performance obligation is satisfied over time or at a point in time. Specifically, if the performance obligation to which the variable consideration related was satisfied at a point in time, an entity would include an estimate of variable consideration in the transaction price only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the variable consideration is subsequently resolved. Conversely, if the performance obligation to which the variable consideration related was satisfied over time, an entity could include any estimate in the transaction price (even a minimum amount) provided that the objective of constraining estimates of variable consideration could be met.

BC420 This approach was based on the rationale that, for a performance obligation satisfied at a point in time, recognition of revenue that could be adjusted up or down would not be a meaningful depiction of the consideration for the related goods or services and, furthermore, any future adjustments to the transaction price (and therefore revenue) would have little correlation with the entity’s performance in that period. Conversely, when a performance obligation is satisfied over time, the initial recognition of some but not all of the estimate of variable consideration would be affected by the entity’s future performance, so future adjustments to the transaction price would provide useful information because they explain whether the entity’s subsequent performance was beneficial (ie the minimum amount is increased) or detrimental (ie the minimum amount is subject to an unexpected reversal). However, the boards rejected this approach because it would have added complexity to the model that would outweigh the benefit.

BC421 Consequently, the boards decided against applying the restriction for sales-based or usage-based royalties on intellectual property more broadly. Although the boards acknowledge that the requirements in paragraph B63 of IFRS 15 constitute an exception that might not be consistent with the principle of recognising some or all of the estimate of variable consideration, they decided
that this disadvantage was outweighed by the simplicity of these requirements, as well as by the relevance of the resulting information for this type of transaction. The boards also noted that because this is a specific requirement intended for only limited circumstances, entities should not apply it by analogy to other types of promised goods or services or other types of variable consideration.

**Repurchase agreements (paragraphs B64–B76)**

BC422 When developing the requirements for control, the boards considered how an entity should apply the requirements to contracts in which the entity sells an asset and also enters into a repurchase agreement (either in the same contract or in another contract).

BC423 The boards observed that repurchase agreements generally come in three forms—fowards, call options and put options. However, the boards decided that an arrangement in which an entity subsequently decides to repurchase a good after transferring control of that good to a customer would not constitute a repurchase agreement as described in paragraph B64 of IFRS 15. This is because the entity’s subsequent decision to repurchase a good without reference to any pre-existing contractual right does not affect the customer’s ability to direct the use of, and obtain substantially all of the remaining benefits from, the good upon initial transfer. In other words, the customer is not obliged to resell that good to the entity as a result of the initial contract. The boards observed that in those cases, the entity should, however, consider whether the customer obtained control of the good initially and may need to consider the requirements for principal versus agent in paragraphs B34–B38 of IFRS 15.

**A forward or a call option**

BC424 If an entity has an obligation or a right to repurchase an asset (ie a forward or a call option, respectively), the boards decided that the customer does not obtain control of the asset and, therefore, no revenue should be recognised. This is because the customer is constrained in its ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. Because the customer is obliged to return, or to stand ready to return, the asset to the entity, the customer cannot use up or consume the entire asset. Moreover, the customer cannot sell the asset to another party (unless that sale is subject to a repurchase agreement, in which case the customer’s benefit from the sale is constrained).

BC425 Theoretically, a customer is not constrained in its ability to direct the use of, and obtain substantially all the benefits from, the asset if an entity agrees to repurchase, at the prevailing market price, an asset from the customer that is substantially the same and is readily available in the marketplace. However, the boards noted that an entity would be unlikely to enter into such a transaction.

BC426 The boards decided that an entity would account for a forward or a call option as a lease or a financing arrangement, depending on the relationship between the repurchase amount and the original selling price. The FASB also decided to specify that when the forward or call option accounted for as a lease is part of a sale-leaseback transaction, the contract should be accounted for as a financing
transaction. Otherwise, the FASB observed that an entity would have been required to account for the transaction as a lease and then as a leaseback, which would not have been appropriate.

BC427 The boards noted that an entity would not need to consider the likelihood that a call option can be exercised, because the existence of the call option effectively limits the customer’s ability to control the asset. However, the boards observed that if the call option is non-substantive, that option should be ignored in assessing whether and when the customer obtains control of a good or service (to be consistent with the general requirement for any non-substantive term in a contract).

A put option

BC428 The boards decided that if the sale and repurchase agreement resulted in an entity’s obligation to repurchase the asset at a customer’s request (ie a put option), the customer would obtain control of the asset because the customer is neither obliged to return the asset nor obliged to stand ready to do so. Consequently, the customer has the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset (ie the customer can sell, use up or consume the entire asset and choose not to exercise the put option). The boards decided that the entity should account for its obligation to stand ready to repurchase the asset, to be consistent with the accounting for the sale of a product with a right of return (see paragraphs BC363–BC367). That results in the entity recognising the following:

(a) a liability for its obligation to repurchase the asset, measured at the amount of the consideration expected to be paid to the customer;

(b) an asset for the entity’s right to receive that asset upon settling that liability, measured at an amount that may or may not equal the entity’s previous carrying value of the asset; and

(c) revenue on transfer of the asset for the difference between the sales price of the asset and the liability recognised for the obligation to repurchase the asset.

BC429 Some respondents questioned whether that accounting would be appropriate in all cases in which a customer has a put option. For instance, some noted that the contract appears to be economically similar to a lease with a purchase option rather than to a right of return. That might be the case if the entity is required to repurchase the asset at a price that is lower than the original sales price and the surrounding facts and circumstances indicate that the customer will exercise its put option. In those cases, the difference between the original sales price and the repurchase price can be viewed as the amount that the customer pays for a right to use the asset, thereby compensating the entity for the decline in the value of the asset. Some respondents noted that, in other cases, the contract is, in effect, a financing arrangement.

BC430 The boards agreed with those respondents and decided that if a customer has a right to require an entity to repurchase the asset at a price that is lower than the original sales price and the customer has a significant economic incentive to exercise that right, then the customer does not obtain control of the asset.
Although the customer is not obliged to exercise its put option, the fact that it has a significant economic incentive to exercise that right means that it would probably incur a loss if it did not do so. (For example, the repurchase price may be set significantly above the expected market value of the asset at the date of the repurchase. However, the boards observed that an entity should consider factors other than the price when determining that it has a significant economic incentive to exercise its right.) The boards decided that in those cases, the existence of the option effectively restricts the customer’s ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. For similar reasons, the boards decided that if the customer has the unconditional right to require the entity to repurchase the asset at a price that is greater than the original sales price, and higher than the expected market value of the asset, the customer does not obtain control of the asset.

The boards also considered whether other arrangements should be accounted for as a lease, such as when an entity provides its customer with a guaranteed amount to be paid on resale (ie a guaranteed minimum resale value). Accounting for those transactions as leases would be consistent with previous US GAAP, and a number of respondents, primarily from the automotive industry, explained that they viewed the transactions to be economically similar. However, the boards observed that while the cash flows may be similar, the customer’s ability to control the asset in each case is different. If the customer has a put option that it has significant economic incentive to exercise, the customer is restricted in its ability to consume, modify or sell the asset. However, when the entity guarantees that the customer will receive a minimum amount of sales proceeds, the customer is not constrained in its ability to direct the use of, and obtain substantially all of the benefits from, the asset. Thus, the boards decided that it was not necessary to expand the requirements for repurchase agreements to consider guaranteed amounts of resale.

**Accounting for repurchase agreements in which the customer does not obtain control of the asset**

If an entity enters into a contract with a repurchase agreement and the customer does not obtain control of the asset, the boards decided the following:

(a) the contract should be accounted for as a lease in accordance with IAS 17 Leases or Topic 840 Leases if the customer is paying for a right to use the asset; and

(b) the contract is a financing arrangement if the net consideration that the entity receives is equal to or less than zero (ie the entity is paying interest).

To ensure consistent accounting in IFRS and US GAAP for a financing arrangement that arises from a contract with a customer, the boards decided to provide guidance consistent with Subtopic 470-40 Debt—Product Financing Arrangements. Consequently, the FASB decided to amend the guidance in Subtopic 470-40 that discusses arrangements in which an entity sells a product to another entity and, in a related transaction, agrees to repurchase the product. However, the FASB decided not to amend Subtopic 470-40 for transactions in which an entity arranges for another party to purchase products on its behalf.
and agrees to purchase those products from the other party. In those cases, the entity is required to recognise the products as an asset and to recognise a related liability when the other party purchases the product. The FASB noted that although IFRS 15 results in similar accounting when the other party acts as an agent of the entity (i.e., the other party does not obtain control of the products), Subtopic 470-40 provides explicit requirements for transactions in which no sale has occurred.

**Transition, effective date and early application (paragraphs C1–C9)**

**Transition (paragraphs C2–C8)**

The boards decided that an entity should apply IFRS 15 using either of the following methods:

(a) retrospectively to each prior reporting period presented in accordance with IAS 8 or Topic 250 Accounting Changes and Error Corrections, subject to some optional practical expedients (see paragraphs BC435–BC438); or

(b) retrospectively with the cumulative effect of initially applying IFRS 15 recognised as an adjustment to the opening balance of retained earnings at the date of initial application (see paragraphs BC439–BC444).

**Retrospective application**

The 2010 and 2011 Exposure Drafts proposed that an entity should apply the requirements retrospectively in accordance with IAS 8 or Topic 250. Retrospective application ensures that all contracts with customers are recognised and measured consistently both in the current period and in the comparative periods presented, regardless of whether those contracts were entered into before or after the requirements became effective. Furthermore, retrospective application provides users of financial statements with useful trend information across the current period and comparative periods. Feedback received from users of financial statements confirmed that retrospective application would be the most useful transition approach for them to be able to understand trends in revenue.

In contrast to the feedback received from users of financial statements, many respondents commented that applying the requirements retrospectively would be burdensome, especially for entities with long-term contracts or large and complex multiple-element arrangements. The main concerns raised by those respondents were as follows:

(a) it may not be possible to obtain historical information for contracts that were completed under previous revenue Standards in IFRS or US GAAP because the relevant information is no longer retained by the entity.

(b) applying IFRS 15 retrospectively (particularly to completed contracts) may not result in a materially different pattern of revenue recognition, and the significant costs incurred to confirm this fact would not provide much benefit to users of financial statements. For example, for contracts that were considered to be completed (as assessed under previous revenue Standards) several years before the date of initial application, an
entity would, theoretically, need to obtain the relevant information to ensure that there was no effect on the pattern of revenue recognition in the financial statements in the year of initial application.

c) presenting the effect of IFRS 15 in the comparative years would incur significant preparation and audit costs, because a change in revenue could affect many other line items in the financial statements (such as deferred tax, receivables, interest and foreign currency gains/losses) as well as items that reference an entity’s revenue in the financial statements (such as taxes, statutory reporting and financing arrangements).

d) the historical information needed to estimate stand-alone selling prices of goods or services in a contract with many performance obligations may not exist.

e) entities make assumptions and estimates throughout a contract’s life, and it may not be possible to recreate the circumstances that apply historically without the use of hindsight.

**Retrospective application with practical expedients (paragraphs C4–C6)**

The boards decided that although retrospective application would generally impose increased preparation costs, those costs would be outweighed by the increased benefits to users of financial statements. Consequently, the boards considered how the burden of retrospective application could be eased while, at the same time, retaining the benefits of comparability and consistency that retrospective application would provide. To ease the burden of transition without sacrificing comparability, the boards decided to allow an entity to elect to use one or more of the following practical expedients when applying IFRS 15 retrospectively.
**Practical expedient**

<table>
<thead>
<tr>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Reducing the number of contracts that require restatement</strong></td>
</tr>
<tr>
<td>For contracts completed before the date of initial application of IFRS 15, an entity need not restate contracts that begin and end within the same annual reporting period.</td>
</tr>
<tr>
<td>In considering whether an entity should be required to review and restate all contracts completed before the date of initial application, the boards decided that trend information should be preserved for completed contracts that span annual reporting periods. Consequently, the boards decided to limit the relief to only those contracts that begin and end within the same annual reporting period, because the amount and timing of revenue recognition relating to those contracts would not change between annual reporting periods. The boards noted that this relief would significantly reduce the transition burden on entities that have a large number of short-term contracts.</td>
</tr>
<tr>
<td>A consequence of this relief is that revenue reported in interim periods before and after the effective date would not necessarily be accounted for on a comparable basis. The boards expect that an entity would not elect to use this relief if it operates in an industry in which comparability across interim reporting periods is particularly important to users of financial statements.</td>
</tr>
</tbody>
</table>

**Simplifying how an entity restates contracts with customers**

| For contracts completed before the date of initial application of IFRS 15 and that have variable consideration, an entity may use the transaction price at the date that the contract was completed rather than estimating variable consideration amounts in the comparative reporting periods. |
| Full retrospective application of IFRS 15 in accordance with IAS 8 or Topic 250 would require an entity to determine the estimates that it would have made at each of the reporting dates in the comparative periods. The boards considered that making those estimates in the comparative years would increase the complexity and costs of retrospective application. |
| By allowing an entity to use hindsight in estimating variable consideration, the boards decided that transition would be simplified for the following reasons: |
| (a) it would reduce the amount of information that an entity would need to collect throughout the transition period; and |
| (b) the entity would not need to determine the transaction price at the end of each period. |

<table>
<thead>
<tr>
<th>Practical expedient</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>Simplifying retrospective application of other aspects of the requirements</td>
<td>The boards decided that the disclosure of the amount of the transaction price allocated to the remaining performance obligations (as would be required by paragraph 120 of IFRS 15) should not be required for periods presented before the date of initial application of IFRS 15 for the following reasons:</td>
</tr>
</tbody>
</table>
| For all reporting periods presented before the date of initial application of IFRS 15, an entity need not disclose the amount of the transaction price allocated to the remaining performance obligations and an explanation of when the entity expects to recognise that amount as revenue (as specified in paragraph 120 of IFRS 15). | (a) the disclosure would be most useful for the current period; and  
(b) the disclosure could be burdensome to prepare for comparative years, especially when trying to avoid the use of hindsight to estimate the transaction price and the expected timing of satisfaction of those performance obligations. |

BC438 As a result of the practical expedients providing some relief from applying IFRS 15 retrospectively, the boards also decided to supplement the transitional disclosure requirements of IAS 8 or Topic 250 to require an entity to provide additional disclosure if it elects to use one or more of the practical expedients. Accordingly, paragraph C6 of IFRS 15 requires an entity to provide an explanation to users of financial statements about which practical expedients were used and, to the extent reasonably possible, a qualitative assessment of the estimated effect of applying those practical expedients.

**Retrospective application with the cumulative effect recognised in the current period (paragraphs C7–C8)**

BC439 The boards decided to develop an alternative transition method to ease the burden of retrospectively applying IFRS 15 because feedback from preparers and auditors indicated that, although helpful, the practical expedients (see paragraph BC437) would not mitigate much of the implementation challenge of a retrospective transition approach. In contrast, users of financial statements generally supported the requirements for retrospective application with practical expedients because it would provide them with useful information on transition and assist their financial statement analyses.

BC440 As a result of those differing views, transition was one of the topics discussed at four disclosure and transition workshops that were held in late 2012 with both users and preparers of financial statements (see paragraph BC328). During those workshops, users of financial statements acknowledged that another transition
method might be appropriate to ease the burden of transition; however, they emphasised their need for trend information, regardless of which method is used.

BC441 After considering this feedback, the boards decided that as an alternative to retrospective application with practical expedients, an entity could apply IFRS 15 (including the requirements for costs) retrospectively, with the cumulative effect of initially applying IFRS 15 recognised in the current year (referred to as the ‘cumulative catch-up’ transition method). Specifically, the cumulative effect would be an adjustment to the appropriate opening balance of equity in the year of initial application (i.e. comparative years would not be restated) for contracts that are not completed at the date of initial application.

(The boards clarified that a completed contract is a contract in which the entity has fully performed in accordance with revenue recognition requirements in effect before the date of initial application. Thus, a completed contract would include a contract for which the entity’s performance was complete but there was a change in the transaction price after the date of initial application.)

The boards observed that the cumulative catch-up transition method responds to feedback from auditors and preparers by eliminating the need to restate prior periods and thus reducing costs.

BC442 The boards noted that applying the cumulative catch-up transition method results in consistent presentation of contracts under previous IFRS or US GAAP during the comparative years and in consistent presentation of any contracts not yet completed at the date of initial application under IFRS 15 in the current year. However, because the comparative information will not be restated under the cumulative catch-up transition method, the boards decided to require additional disclosures to help users of financial statements understand the effect on trend information. Consequently, when an entity uses the cumulative catch-up transition method, it is required to disclose the following information for reporting periods that include the date of initial application:

(a) the amount by which each financial statement line item is affected in the current year as a result of the entity applying IFRS 15 rather than previous revenue Standards in IFRS; and

(b) an explanation of the reasons for the significant changes in those financial statement line items.

BC443 In other words, to provide the required disclosures, an entity would apply both IFRS 15 and the previous revenue Standards in the year of initial application. Despite requiring an entity to account for revenue transactions in the year of initial application using two different sets of accounting requirements, the boards decided that this method would reduce the overall cost of applying IFRS 15 while still providing information about trends that was requested by users of financial statements.

BC444 The boards also considered other transition methods as alternatives to the cumulative catch-up method to try to ease the burden of retrospective application. For example, the boards considered requiring a prospective approach that would require entities to apply IFRS 15 only to new contracts or those that are materially modified on or after the date of initial application.
However, the boards rejected this approach because prospective application would not result in consistent presentation of existing contracts and new contracts and thus would reduce comparability. In addition, this approach would not provide useful trend information for users of financial statements until existing contracts have been fully satisfied after the date of initial application. Furthermore, the boards observed that this approach would require some entities to incur significant costs of maintaining two accounting systems for contracts that are accounted for in accordance with IFRS 15 and previous revenue Standards in IFRS, until all existing contracts have been completed, which could take many years for entities with long-term contracts.

Other relief

If an entity applies IFRS 15 retrospectively in accordance with paragraph C3(a) of IFRS 15 (ie without electing to use the cumulative catch-up transition method), comparative information would be restated. Consequently, the IASB clarified that if an entity applies IFRS 15 retrospectively in accordance with paragraph C3(a), it is not required to provide the current year transition disclosure in paragraph 28(f) of IAS 8.

Effective date and early application (paragraph C1)

Effective date

In the 2011 Exposure Draft, the boards indicated that the effective date of IFRS 15 would be set to ensure that the start of the earliest comparative period for an entity that is required to present two comparative annual periods (in addition to the current annual period) would be after the final requirements are issued. The boards developed this approach in response to feedback obtained from interested parties through a number of activities, including:

(a) the IASB’s Request for Views on Effective Dates and Transition Methods and the FASB’s Discussion Paper Effective Dates and Transition Methods (October 2010);

(b) the boards’ joint investor outreach questionnaire (April 2011); and

(c) consultation with systems providers and preparers in 2010 and 2011.

On the basis of that proposed formula for setting an effective date and of the estimated issue date of IFRS 15 at the time of their decision, the boards would have set the effective date as 1 January 2016. However, many respondents, including respondents in industries for which there could be significant process and system changes required to comply with IFRS 15 (for example, in the telecommunications and software industries), indicated that the proposed formula would not provide them with adequate time. Specifically, those respondents explained that providing only a short time before the earliest comparative period would not be sufficient to ensure that processes and systems were in place to capture the information that would be required to apply IFRS 15 retrospectively. Some respondents further explained that because of the large volume of contracts in their businesses, it would be far more cost-effective to process the information on a real-time basis to ensure that the adjustments to
the financial statements were being calculated during the transition period, rather than attempting to retrospectively calculate the adjustments at the date of initial application.

BC448 The boards considered whether their decision to permit an alternative transition method (see paragraphs BC439–BC444) would provide sufficient relief that an effective date of 1 January 2016, would be appropriate. However, the boards noted that if a contract is not completed at the date of initial application, the entity would need to apply IFRS 15 to that entire contract to calculate any cumulative effect that would be recognised in the opening retained earnings in the year of initial application. The boards noted that the industries that would be most affected generally have contracts with durations that would result in those industries still having only a few months to prepare their processes and systems to capture the required information on a real-time basis.

BC449 Consequently, the FASB decided to require that a public entity apply Topic 606 for annual reporting periods beginning after 15 December 2016, and the IASB decided to require that an entity apply IFRS 15 for annual reporting periods beginning on or after 1 January 2017. Although the effective dates are not identical, the boards noted that this difference has resulted from precedents in IFRS and US GAAP. Furthermore, the difference is not significant and the boards did not expect that it would result in a difference in the way that an entity considers the effective date.

BC450 The boards acknowledged that the period of time from which IFRS 15 is issued until its effective date is longer than usual. However, in this case, the boards decided that a delayed effective date is appropriate because of the unique attributes of IFRS 15, including the wide range of entities that will be affected and the potentially significant effect that a change in revenue recognition has on other financial statement line items.

BC451 To ensure consistency with the IASB’s requirements in IAS 34, the FASB clarified that the first set of interim financial reports in which Topic 606 will apply is the first set of interim financial reports after the effective date (ie 31 March 2017 for a calendar year-end entity). The FASB also decided that this is appropriate because of the relatively long lead time that has been provided to entities.

Early application

BC452 The FASB decided not to allow entities to apply Topic 606 early, because doing so would have reduced the comparability of financial reporting in the period up to the date of initial application. Although the IASB agreed that allowing early application would reduce the comparability of financial reporting in the period up to the date of initial application, the IASB noted that IFRS 15 improves accounting for revenue in areas in which there was little guidance under previous revenue Standards in IFRS and, thus, entities should not be precluded from applying IFRS 15 before its effective date. Furthermore, the IASB noted that IFRS 15 should resolve some pressing issues in practice arising from previous revenue recognition requirements. For example, the requirements for determining whether a performance obligation is satisfied over time should address the current diversity in practice associated with the application of the interpretation of IFRS on the construction of real estate.
The boards observed that the IASB-only decision to permit early application should not result in differences after the date of initial application in the accounting for revenue between entities applying US GAAP and those applying IFRS that apply IFRS 15 early, even for contracts that straddle the date of initial application.

Analysis of the effects of IFRS 15

The objective of financial statements is to provide information about the financial position, financial performance and cash flows of an entity that is useful to a wide range of users of financial statements in making economic decisions. To attain that objective, the boards try to ensure that new requirements meet a significant need and that the overall benefits to economic decision-making that would result from improved financial reporting justify the costs of providing such information. For example, the boards consider the comparative advantage that preparers have in developing information, compared with the costs that users of financial statements would incur to develop surrogate information. In this evaluation, the boards recognise that the costs of implementing a new standard might not be borne evenly by participants in the financial reporting system. However, both the users of financial statements and the entities that prepare those financial statements benefit from improvements in financial reporting that facilitate the functioning of markets for capital, including credit and the efficient allocation of resources in the economy.

The IASB is committed to assessing and sharing knowledge about the likely costs of implementing new requirements and the likely, associated ongoing costs and benefits of each new Standard—these costs and benefits are collectively referred to as ‘effects’. The evaluation of these effects is necessarily subjective and qualitative. This is because quantifying costs and, particularly, benefits, is inherently difficult. Although other standard-setters undertake similar types of analyses, there is a lack of sufficiently well-established and reliable techniques for quantifying this analysis. Consequently, the IASB sees this analysis of the effects as being part of an evolving process. In addition, the assessment undertaken is that of the likely effects of the new requirements because the actual effects would not be known until after the new requirements had been applied. These are subsequently analysed through the Post-implementation Review process.

Overview

As explained in paragraphs BC2–BC3, the boards developed IFRS 15 to eliminate the inconsistencies and weaknesses in previous revenue recognition requirements and to improve disclosure requirements related to revenue. However, throughout the project, many preparers and some users of financial statements explained that they did not perceive significant weaknesses in previous revenue recognition requirements. Therefore, those preparers and users questioned whether the benefits of applying a new revenue standard would justify the costs of implementing that standard.
To gain insight on the likely effects of IFRS 15, the boards conducted extensive consultation with interested parties through the formal exposure of the proposals and outreach activities. This consultation included three formal exposure documents—a Discussion Paper and two Exposure Drafts—in response to which the boards received and assessed more than 1,500 comment letters. Over the course of the project, the boards and staff also held more than 650 meetings with users of financial statements, preparers, auditors, regulators and other interested parties in a wide range of industries and a number of jurisdictions. Those meetings included general educational sessions about the proposals and in-depth discussions in relation to particular topics. Some meetings also focused on gaining an understanding of the effects of the proposals in specific industries or on particular transactions. In some cases, the boards undertook additional outreach in those specific industries or on those particular topics for which there were significant operational or other concerns about the effects of the boards’ proposals. For example, because of the disparate views of preparers and users of financial statements on the topic of disclosure requirements, the boards sought further feedback in four workshops that brought user and preparer groups together to discuss how to balance the requirements to be more useful for users of financial statements and less burdensome for preparers (see paragraph BC328). In addition, because of the effect of the principles for allocating the transaction price on a typical mobile phone contract, the boards also held a number of meetings with representatives from the telecommunications industry to better understand their concerns and so that those concerns could be considered during redeliberations. The boards’ consideration of the feedback received from this industry and their conclusions is included in paragraphs BC287–BC293 and BC473–BC476.

The boards considered in their redeliberations all of the feedback received and, as a result, decided to modify or clarify many aspects of the revenue recognition model to reduce the burden of implementing and applying the proposed requirements. Discussion of this feedback and the resulting changes in different aspects of the model are included throughout the Basis for Conclusions and are summarised in this analysis of the effects.

Overall, the boards concluded that the improvements to financial reporting would justify the costs of implementing IFRS 15. In making this assessment, the boards considered:

(a) how revenue from contracts with customers would be reported in the financial statements;

(b) how the comparability of financial information would be improved and the benefit of better economic decision-making as a result of improved financial reporting;

(c) the likely compliance costs for preparers of financial statements; and

(d) the likely costs of analysis for users of financial statements.
Reporting revenue from contracts with customers in the financial statements

BC460 IFRS 15 replaces the previous limited revenue recognition requirements in IFRS and the broad revenue recognition concepts and industry-specific requirements in US GAAP with a robust and comprehensive framework that is applied to all revenue contracts with customers (except for lease, insurance and financial instruments contracts which fall within the scope of other Standards). This framework provides a basis that should be more easily applied to complex transactions and that provides timely guidance for evolving revenue transactions.

BC461 The framework in IFRS 15 also fills a gap by providing requirements for revenue transactions that had not previously been addressed comprehensively, such as transactions for revenue for the provision of services and for revenue resulting from licences of intellectual property. In addition, IFRS 15 provides requirements for issues such as contract modifications that were previously addressed only for a particular industry. IFRS 15 also provides improved requirements for some transactions such as multiple-element arrangements (see paragraphs BC470–BC472).

BC462 By providing a comprehensive framework, one of the most significant effects of IFRS 15 in reporting revenue from contracts with customers is greater consistency in the accounting for economically similar transactions. This is because the diversity in practice that developed as a result of weaknesses in previous revenue recognition requirements in IFRS and US GAAP would be eliminated. However, the previous inconsistencies in the accounting and the diversity in practice that existed before the issuance of IFRS 15 may mean that the nature and extent of the changes would likely vary between entities and industries. For example, some industries, such as the telecommunications and software industries, may have significant changes. This is because those industries had narrow and transaction-specific industry revenue recognition requirements in US GAAP (which were often referred to by entities applying IFRS). However, other industries, such as the construction industry, may see minimal changes overall but significant changes for particular entities or jurisdictions that may have interpreted previous requirements differently to apply to their specific transactions. For other contracts, such as straightforward retail transactions, IFRS 15 would have little, if any, effect. The boards were aware of those varying effects when developing IFRS 15 and took them into account in their decision-making. In many cases, the boards observed that the requirements in IFRS 15 may be broadly consistent with previous revenue recognition requirements or practices, thus limiting the effects of IFRS 15 for many entities.

BC463 In making their assessment of the nature of the changes in the reporting of revenue from contracts with customers (i.e., the recognition and measurement of revenue), the boards observed that the following parts of the revenue recognition model are expected to result in the most significant changes for some entities:

(a) transfer of control: basis for the timing of revenue recognition;
Transfer of control: basis for the timing of revenue recognition

Previous revenue recognition requirements typically determined the timing of revenue recognition depending on whether the asset transferred was a good or a service. Both IFRS and US GAAP required revenue to be recognised for goods when risks and rewards transferred and, for services, as the service was performed. However, both approaches presented challenges in determining when to recognise revenue and often resulted in accounting for economically similar transactions differently. For example, when determining when to recognise revenue for the transfer of a good, it was often difficult for an entity to judge whether a preponderance (or some other balance) of the risks and rewards had been transferred to the customer. In some contracts, there could be significant difficulty in interpreting whether the asset to be transferred was a good or a service, therefore, making it difficult to rationalise why for one asset, revenue should be recognised only when the asset was complete (ie a good), whereas for another asset, revenue should be recognised continuously as that asset is created (ie a service). Some of this difficulty was due to the vague and narrow definition of services in US GAAP and the lack of clear rationale (ie a Basis for Conclusions) in IFRS for why, in some cases, revenue should be recognised for a service over time. In some cases, entities that applied IFRS consulted the rationale in US GAAP for why revenue would be recognised over time for a service. That rationale explained that this was because the entity was transferring a service continuously. However, that rationale did not address many specific application questions in IFRS about determining whether specific items met the definition of a service. In response, the IASB developed an Interpretation to help clarify whether the construction of real estate would be accounted for as a good or a service (ie a performance obligation satisfied at a point in time or over time). However, many observed that the principle in that Interpretation was difficult to understand and apply.

In the light of the challenges with previous revenue recognition requirements, the boards observed that applying the single framework in IFRS 15 to determine the timing of revenue recognition for both goods and services would improve the consistency in accounting for revenue. This is because the framework would be applied to the attributes of the goods and services transferred, together with the terms of the contract, rather than only to the type of contract. In addition, the boards determined that the core principle in IFRS 15, based on the notion of transferring control, would further improve the consistency of reporting because it would provide a more objective assessment for determining the timing of revenue recognition.

The boards noted that the application of the core principle may not result in changes for all contracts. For example, the boards acknowledge that for construction contracts, the application of the criteria for when a good or service transfers over time (and thus, is a performance obligation satisfied over time) in
IFRS 15 would likely broadly result in the same accounting as required by previous revenue recognition requirements for contracts that met the definition of ‘services’. However, the boards observed that the application of IFRS 15 could result in changes for those contracts for which, under previous revenue recognition requirements, it may have been difficult to conclude that the contracted activities were services. This may occur in some manufacturing service contracts and contracts for the construction of residential real estate.

Application guidance: licensing

Previous revenue recognition requirements did not determine the timing of revenue recognition for licences based on an assessment of whether the licence was a good or a service. However, those previous requirements were limited and industry-specific. For example, in US GAAP, revenue recognition for licences differed depending on the industry (for example, franchisors, media and entertainment and software) and often was based on features of the licence (for example, licence period or payment terms). Therefore, the previous revenue recognition requirements did not coalesce into a single principle or rule. In IFRS, previous revenue recognition requirements for licences required revenue to be recognised ‘in accordance with the substance of the agreement’. However, because those requirements provided minimal guidance on how an entity should assess the ‘substance of the agreement’, there was significant diversity in practice for the accounting for licences.

The boards included in IFRS 15 application guidance on how an entity should assess and account for its licence arrangements. That guidance is anchored in applying key steps of the revenue recognition model—specifically, identifying the performance obligations in a contract and assessing the transfer of control, which the boards operationalised by differentiating between two types of licences. The boards also decided to include in the application guidance the rationale for the guidance and additional illustrative examples to explain the intention, objective and application of those steps and the differentiation between licences.

The detailed application guidance for licences in IFRS 15 is intended to help entities determine when a licence is transferred to a customer and thus when revenue can be recognised. Because of the previous diversity in practice in revenue recognition for licences, the addition of the application guidance in IFRS 15 may change practice for some entities. However, the boards observed that the diversity and inconsistencies that previously existed meant that some changes in practice would have occurred regardless of how the boards decided to apply the revenue recognition model to licences.

Identification of performance obligations in a contract

The boards cited deficiencies in previous IFRS and US GAAP in the accounting for arrangements with multiple elements as one of the reasons for adding the Revenue Recognition project to its agenda. Although US GAAP was improved after the Revenue Recognition project began, deficiencies still existed. For example, there was no definition of a ‘deliverable’ in previous US GAAP, even though the term was used to determine the unit of account for revenue transactions. IFRS had even fewer requirements because it only acknowledged
that revenue could be recognised for ‘separately identifiable components of a single transaction’, without providing guidance on how to determine what constituted a ‘separately identifiable component’.

BC471 IFRS 15 addresses those weaknesses by defining promised goods or services that should be accounted for separately as performance obligations. IFRS 15 defines a performance obligation and provides criteria and factors for identifying performance obligations, which are based on the notion of distinct goods or services. These requirements were developed on the basis of extensive consultation and attempts to separate contracts in a meaningful and cost-effective way with intuitive outcomes.

BC472 The boards observed that the requirements in IFRS 15 for identifying performance obligations may not result in significant changes for many entities. This is because many entities have developed practices to separate contracts with customers in a manner that was similar to the requirements in IFRS 15. However, the boards observed that because there were specific requirements in previous US GAAP, there would be a change in the accounting for incidental obligations and marketing incentives (see paragraphs BC87–BC93). This is because the requirements in IFRS 15 would require an entity to identify and recognise revenue for those goods or services, when previously they may have been recognised as an expense or ignored for the purposes of revenue recognition. The boards observed that two industries that would be particularly affected by this change are the automotive industry (which previously recognised as an expense the promise of maintenance with the purchase of an automobile) and the telecommunications industry (which sometimes did not attribute any revenue to the handsets provided as part of a bundled offering).

Allocating the transaction price to performance obligations based on relative stand-alone selling prices

BC473 Previous revenue recognition requirements in IFRS and US GAAP for the allocation of consideration in multiple-element arrangements were different. Before IFRS 15, there were no general requirements in IFRS for allocation of consideration (there were some specific requirements in an Interpretation for one type of transaction—that is, customer loyalty points). This was due in part to the lack of guidance on defining an element or unit of account for revenue. In contrast, US GAAP specified that an allocation of the consideration to multiple-elements should be made on a relative selling price basis for some industries. US GAAP also included explicit requirements for some industries on determining the selling price of an item, which required an entity to use vendor-specific objective evidence, but it also permitted the use of estimation techniques in some cases. However, the allocation requirements in the software industry strictly prohibited allocation to individual elements unless the entity obtained vendor-specific objective evidence for all elements of the contract. Because there was often no vendor-specific objective evidence available for one or more undelivered elements, revenue recognition was delayed until all elements had been delivered.

BC474 Although the principle for allocating the transaction price in IFRS 15 is broadly consistent with previous US GAAP for some industries—that is, allocating the transaction price on a relative stand-alone selling price basis—there may be a
change in some outcomes, in particular in the software industry. This is because the boards decided to eliminate the restrictive, industry-specific requirements in US GAAP for allocating consideration in software arrangements (i.e., the requirement to have vendor-specific objective evidence for all elements in the arrangements before consideration can be allocated). Instead, IFRS 15 requires an entity to estimate the stand-alone selling price of a good or service, if the stand-alone selling price is not directly observable. The boards observed that this change would permit an entity in the software industry to better depict performance by recognising revenue for performance obligations when they are satisfied, instead of when all performance in a contract is complete. In some instances, the boards observed that this may permit entities to eliminate the disclosure of non-GAAP measures that were created because the outcomes from applying previous revenue recognition requirements did not faithfully depict an entity’s performance.

BC475 The boards observed that the requirements for allocating the transaction price in IFRS 15, in conjunction with the requirements for identifying performance obligations, may also result in a significant change in the accounting for bundled arrangements in the automotive and telecommunications industries. As explained in paragraph BC457, the boards’ consideration of the feedback received from the telecommunications industry and their conclusions are included in paragraphs BC287–BC293.

BC476 The boards observed that even though IFRS 15 may result in significant differences in the allocation of the transaction price to performance obligations (and consequently in the amount and timing of the recognition of revenue) in some industries, the change was necessary to provide greater consistency in the recognition of revenue across industries. In addition, the boards observed that the effects were a consequence of the boards’ objectives of eliminating industry-specific requirements and defining a common framework that could be applied to all revenue transactions. Furthermore, the boards observed that the allocation requirements in IFRS 15 would result in accounting for a transaction in a manner that more closely reflects the underlying economics.

Measurement of revenue

BC477 Previous requirements for the measurement of revenue in US GAAP were limited and differed for goods and for services. US GAAP did not provide specific requirements for how to measure revenue for goods, but it nevertheless restricted the amount of revenue that could be recognised for goods to the amount that was fixed or determinable. IFRS required revenue to be recognised for the transfer of goods and services at the fair value of the consideration received/receivable; but, there was no guidance on how to apply that principle because IFRS 13 Fair Value Measurement was not effective until 1 January 2013. Consequently, that principle was not consistently applied. In addition, IFRS contained little guidance on how to measure variable consideration. However, both IFRS and US GAAP indicated that the amount of revenue to be recognised for services should be limited to an amount that could be ‘estimated reliably’.

BC478 Thus, IFRS 15 appears to be a significant change from previous revenue recognition requirements because it introduces a customer consideration model and measures revenue using the transaction price, which is defined as the
amount to which the entity expects to be entitled in exchange for transferring goods or services. However, previous practices were broadly consistent with this approach and many entities determined the amount of revenue on the basis of the amounts the customer promised to pay. Where IFRS 15 differs from previous revenue recognition requirements is in the additional guidance it provides for estimating consideration when it is variable and in constraining those estimates to ensure revenue is not overstated. In addition, IFRS 15 provides requirements related to other aspects of measuring revenue such as accounting for significant financing components, non-cash consideration and consideration payable to a customer.

The additional guidance includes two methods for estimating variable consideration, which may not substantially change the amount of revenue recognised in many industries in which robust estimation methods have been developed over time. However, it may result in changes in the timing of revenue recognised in other cases, for which estimation of variable consideration was either prohibited or not used in the recognition of revenue. For example, in some distribution channels, entities may not have estimated the price of a good or service when that price depended on the eventual sale to an end customer. In those cases, revenue was not recognised until that final sale occurred. The boards concluded that the additional guidance for estimation methods should ensure that performance is better reflected in the financial statements in those cases and should provide greater consistency in estimating variable consideration. The additional guidance would also provide users of financial statements with more transparency on the estimation process, which was often masked with undefined terms such as ‘best estimates’.

In addition, the requirements for constraining estimates of variable consideration provide entities with a more specific approach for assessing the likelihood of an entity being entitled to variable consideration and, therefore, whether or not to include an estimate of that variable consideration in the amount of revenue recognised. It would also give users of financial statements more confidence in the amount of revenue recognised in the financial statements by requiring a consistent approach to estimating the amount of variable consideration to which an entity is entitled. The boards included the requirements for constraining estimates of variable consideration in part because of feedback from users of financial statements who demanded that estimates should be of high quality, but also because a significant portion of errors in financial statements have related to the overstatement of revenue.

Improved comparability of financial information and better economic decision-making

Before the issuance of IFRS 15, there were significant differences in accounting for economically similar revenue transactions, both within and across industries for entities applying US GAAP. There was also significant diversity in practice in accounting for revenue transactions for entities applying IFRS. Those differences made it difficult for users of financial statements to understand and compare revenue numbers. As explained in paragraphs BC460–BC480, some of this diversity arose because there were limited revenue recognition requirements in IFRS in general and on particular topics. Furthermore, the requirements that
were provided were difficult to apply to complex transactions, in part because there was no rationale for those requirements (ie there was no Basis for Conclusions). Those differences also arose because previous revenue recognition requirements in US GAAP were voluminous and often industry-specific or transaction-specific, which also created difficulty for users of financial statements in interpreting the information about revenue. The boards noted that the diversity in practice and challenges to users were often amplified for entities applying IFRS because some preparers selectively referenced US GAAP.

BC482 Analysis of revenue by users of financial statements was made even more difficult because previous disclosure requirements for revenue were inadequate. Consequently, users of financial statements found it difficult to understand an entity’s revenues, as well as the judgements and estimates made by that entity in recognising those revenues. However, many entities acknowledged a need to provide investors with additional information about revenue and therefore provided this information in other reports outside the financial statements (for example, in earnings releases and shareholder reports).

BC483 By providing a robust, comprehensive framework that would be applied by entities applying both IFRS and US GAAP, IFRS 15 would eliminate the previous diversity in practice and create greater comparability across entities, industries and reporting periods. In addition, the boards observed that a common revenue Standard should make the financial reporting of revenue comparable between entities that prepare financial statements in accordance with IFRS or US GAAP, resulting in a significant benefit to users. Furthermore, by providing a rationale for the requirements (ie a Basis for Conclusions), the framework should be more easily applied to a broad range of transactions and contracts.

BC484 In addition, IFRS 15 provides comprehensive disclosure requirements that should greatly improve the information about revenue reported in the financial statements (see paragraphs BC327–BC361). Specifically, the information about revenue would enable users of financial statements to better understand an entity’s contracts with customers and revenue from those contracts and to better predict cash flows. This information should also help users of financial statements to make more informed economic decisions. The boards acknowledged that these improvements may increase the costs of the application of IFRS 15 for preparers. However, the boards concluded that these costs were necessary to improve the usefulness of financial reporting in an area that is critical for users of financial statements to the analysis and understanding of an entity’s performance and prospects.

BC485 During outreach, the boards learned that the disclosures required by IFRS 15 may help some entities to eliminate various alternative reporting measures that were created because previous revenue recognition requirements did not adequately depict their performance. Conversely, the boards noted that other industries in which changes may be more significant may be required to create alternative performance measures to help users understand the difference between previous accounting requirements and the requirements under IFRS 15. However, because the requirements adequately depict performance, the boards do not expect that these performance measures would be necessary in the longer term.
Compliance costs for preparers

As with any new requirements, there will be costs to implement IFRS 15. The breadth of industries and entities that will be required to apply IFRS 15, and the diversity in practice that existed under previous revenue recognition requirements, make it difficult to generalise the costs to preparers. However, because of the breadth of industries and entities that will be affected, most entities will incur at least some costs. Broadly, the boards expect that a majority of preparers may incur the following costs:

(a) costs to implement changes in or develop new systems, processes and controls used to gather and archive contract data, make required estimates and provide required disclosures, possibly including fees paid to external consultants;
(b) costs to hire additional employees that may be needed to comply with IFRS 15 and modify processes and internal controls accordingly;
(c) incremental fees paid to external auditors to audit the financial statements in the period of initial application of IFRS 15;
(d) costs required to educate management, finance and other personnel about the effects of IFRS 15; and
(e) costs required to educate users of financial statements about the effects on the financial statements.

Many of the costs listed in paragraph BC486 will be non-recurring, because they will be incurred only upon initial application of IFRS 15. However, some entities that expect significant changes as a result of applying IFRS 15 expect that the continued application of IFRS 15 will likely cause the following long-term increases in costs:

(a) increase in audit fees because of the increased volume of disclosures and the difficulty of auditing some of the required estimates (for example, estimates of stand-alone selling price and variable consideration);
(b) costs to maintain improved systems and make modifications for transactions; and
(c) higher personnel costs.

The boards considered those costs in their analysis of the effects for the Standard as a whole and in relation to specific provisions in IFRS 15 when making their decisions. Board members and staff consulted extensively across a wide range of industries and jurisdictions to better understand some of the operational issues arising from the proposals in the Discussion Paper and both Exposure Drafts. The boards took that feedback into consideration in their redeliberations and, as a result, modified or clarified many aspects of the revenue recognition model to reduce the burden of implementing and applying the requirements. Those decisions and their rationale are documented throughout the Basis for Conclusions in relation to specific aspects of the model such as variable consideration and significant financing components. Those clarifications and modifications included:
clarifying the use of portfolios—the boards clarified that many entities would not need to develop systems to account for each contract individually, especially entities that have a large volume of similar contracts with similar classes of customer. In those cases, the boards noted that entities may apply the requirements to a portfolio of similar contracts.

(b) practical expedients—the boards added some practical expedients (for example, in the requirements for adjusting the transaction price for significant financing components) to simplify compliance with the requirements in circumstances in which the boards determined that applying the practical expedient would have a limited effect on the amount or timing of revenue recognition.

c) disclosure requirements—the boards eliminated the rigidity in the disclosure requirements proposed in the 2011 Exposure Draft that required entities to provide a detailed reconciliation of their contract balances. Instead, the boards decided to require only the opening and closing balances as well as some information on the changes in those balances. The boards also provided similar relief for the reconciliation proposed in the 2011 Exposure Draft for the costs to obtain or fulfil a contract.

d) transition requirements—the boards expected that the costs of the systems and operational changes would be incurred primarily during the transition from previous revenue recognition requirements to IFRS 15. Therefore, to ease implementation costs and complexities associated with transition to IFRS 15, the boards decided to provide practical expedients that an entity may elect to use when applying the requirements retrospectively. In addition, the boards introduced an alternative transition method (ie the cumulative catch-up transition method) that would alleviate the costs of transition for many entities because it would not require restatement of prior periods.

e) additional illustrations—the boards responded to requests from respondents to provide examples that would illustrate the various aspects of IFRS 15 by providing educational guidance designed to help with implementation and understandability wherever possible. The boards concluded that this would help to reduce both the initial and ongoing cost of compliance, as well as enhancing the consistency of application and therefore comparability of financial statements.

Costs of analysis for users of financial statements

The boards note that, as with all new requirements, there will be an educational and adjustment period for users of financial statements, during which they may incur costs. Those costs may include costs to modify their processes and analyses. However, the costs are likely to be non-recurring and are likely to be offset by a longer-term reduction in costs from the additional information that would be provided by the improved disclosure requirements. Users of financial statements may also observe a longer-term reduction in education costs, because
of the common framework created by IFRS 15, which applies across jurisdictions, industries and transactions.

BC490 In the boards’ view, the significant benefits to users of financial statements from IFRS 15 will justify the costs that the users may incur. Those benefits include:

(a) greater comparability and consistency of reporting revenue from contracts with customers;
(b) a better depiction of entities’ performance; and
(c) improved understanding of entities’ contracts and revenue-generating activities.

Conclusion

BC491 The boards concluded that the issuance of IFRS 15 achieves their objectives as outlined in paragraph BC3. This is because IFRS 15 provides a robust and comprehensive framework that:

(a) will apply to a broad range of transactions and industries and will improve the comparability of the recognition of revenue across industries and jurisdictions;
(b) can be applied to complex transactions and evolving transactions, resulting in greater consistency in the recognition of revenue; and
(c) will require enhanced disclosures that will improve the understandability of revenue, which is a critical part of the analysis of an entity’s performance and prospects.

BC492 In the light of these achievements, the boards determined that the issuance of IFRS 15 would result in an overall improvement to financial reporting. The boards also concluded that these benefits would be ongoing and would justify the costs of implementing IFRS 15 (for example, systems and operational changes) that would be incurred primarily during the transition from previous revenue recognition requirements.

BC493 However, because of differences in their previous revenue recognition requirements, the boards noted that their rationale for the conclusion that IFRS 15 results in ‘an improvement to financial reporting’ was slightly different. The differences in their rationale are as follows:

(a) Previous revenue recognition requirements in US GAAP were rules-based and provided specific requirements for particular transactions and industries. In addition, there were transactions that were not directly in the scope of specific guidance. Consequently, economically similar transactions were often accounted for differently. Overall, the robust and comprehensive framework in Topic 606 should improve comparability in the accounting for economically similar transactions and should result in accounting that better reflects the economics of those transactions.

4 As indicated in footnote 1, unless indicated otherwise, all references to IFRS 15 in this Basis for Conclusions can be read as also referring to Topic 606 in the FASB’s Accounting Standards Codification®.
As described in paragraph BC460, the previous revenue recognition requirements in IFRS were limited. In particular, IFRS did not include general requirements related to many key issues in revenue recognition such as multiple-element arrangements and how to allocate consideration to those elements. In addition, the lack of a Basis for Conclusions in those previous revenue recognition requirements in IFRS created challenges in assessing how to apply the principles in those requirements. In combination, these factors contributed to diversity in practice across jurisdictions and industries. By providing a comprehensive framework and a Basis for Conclusions, IFRS 15 should be a significant improvement to the previous revenue recognition requirements. Consequently, IFRS 15 should eliminate that previous diversity in practice and thus improve financial reporting.

Consequential amendments

Sales of assets that are not an output of an entity’s ordinary activities

BC494 For the transfer of non-financial assets that are not an output of an entity’s ordinary activities, the boards decided to amend their respective Standards to require that an entity apply the requirements from IFRS 15 for the following topics:

(a) control—to determine when to derecognise the asset.

(b) measurement—to determine the amount of the gain or loss to recognise when the asset is derecognised (including any constraints on the transaction price because it is variable).

BC495 The FASB also decided to apply the requirements from Topic 606 for the existence of a contract to transfer a non-financial asset. Those requirements require an entity to determine whether the parties are committed to perform under the contract, which can be difficult in sales of real estate in which the seller has provided significant financing to the purchaser.

BC496 Those amendments will result in changes to IAS 16 Property, Plant and Equipment, IAS 38 and IAS 40 Investment Property and to Topic 360 and Topic 350 Intangibles—Goodwill and Other. The changes to those Standards will result in the same accounting requirements under IFRS and US GAAP for the transfer of non-financial assets that are not an output of an entity’s ordinary activities. However, because the requirements in those Standards were previously different under IFRS and US GAAP, the boards have different reasons for making those changes.

Consequential amendments to US GAAP

BC497 A contract for the sale of real estate that is an output of an entity’s ordinary activities meets the definition of a contract with a customer and, therefore, is within the scope of Topic 606. Because Subtopic 360-20 Real Estate Sales provided requirements for recognising profit on all real estate sales, regardless of whether real estate is an output of an entity’s ordinary activities, the FASB considered the implications of retaining the requirements in Subtopic 360-20 for contracts that

© IFRS Foundation
BC498 Consequently, the FASB decided to amend Topic 360 and create Subtopic 610-20 Gains and Losses from the Derecognition of Nonfinancial Assets to require that an entity apply the requirements in Topic 606 for the existence of a contract, for control, and for measurement of a contract for the transfer of real estate (including in-substance real estate) that is not an output of the entity’s ordinary activities. If the real estate is a business (and not an in-substance non-financial asset), the requirements in Subtopic 810-10 for consolidation apply.

BC499 The FASB also decided to specify that an entity apply the requirements in Topic 606 for the existence of a contract, for control and for measurement to contracts for the transfer of all non-financial assets in non-revenue transactions, such as tangible assets within the scope of Topic 360 and intangible assets within the scope of Topic 350. The primary reason for that decision was the lack of clear requirements in US GAAP for accounting for the transfer of non-financial assets when those assets are not an output of an entity’s ordinary activities and do not constitute a business or non-profit activity. In addition, the FASB decided, due to the lack of guidance in Topics 350 and 360, to add guidance for how to account for a contract that fails to meet the criteria in paragraph 606-10-25-1.

Consequential amendments to IFRS

BC500 In IFRS, an entity selling an asset within the scope of IAS 16, IAS 38 or IAS 40 would have applied the recognition principles of the previous revenue Standards in IFRS to determine when to derecognise the asset and, in determining the gain or loss on the transfer, would have measured the consideration at fair value. However, the IASB noted that there is diversity in practice in the recognition of the gain or loss when the transfer of those assets involves variable consideration, because the previous revenue Standard in IFRS did not provide specific requirements for variable consideration. The IASB decided that requiring application of the requirements in IFRS 15 for control and for measurement (including constraining the amount of variable consideration used in determining the gain or loss) would eliminate the diversity in practice because the requirements in IFRS 15 provide a clear principle for accounting for variable consideration.

BC501 The IASB considered whether it should retain fair value as the measurement basis for transfers of non-financial assets within the scope of IAS 16, IAS 38 and IAS 40. However, the IASB rejected this proposal and, as explained in paragraph BC500, decided to require that an entity apply the measurement requirements in IFRS 15 to transfers of non-financial assets that are not an output of the entity’s ordinary activities, for the following reasons:
(a) measuring the gain on the transfers of non-financial assets that are not an output of the entity’s ordinary activities by using the same requirements as for measuring revenue provides users of financial statements with useful information. The IASB decided that it would provide useful information if entities apply the requirements for constraining estimates of variable consideration to any gain that will be recognised on the transfer of the non-financial asset. The IASB acknowledged that in some cases this may result in a loss on the transfer when the transferred asset has a cost basis that is greater than the constrained consideration, which may occur when the asset has a cost basis that is determined using fair value. However, the IASB noted that this outcome is appropriate and useful to users, because of the significant uncertainty about the variable consideration. The IASB also noted that this outcome is consistent with the outcome in a transaction with a customer in which the variable consideration is constrained, but the entity has transferred control of the good or service to the customer.

(b) it is not necessary to measure the gains on the transfers of non-financial assets to be consistent with other asset disposals, such as disposals of an entity, that are accounted for at fair value in accordance with other Standards (for example, IFRS 10). This is because transfers of non-financial assets that are not an output of an entity’s ordinary activities are more like transfers of assets to customers, rather than other asset disposals.

(c) applying the measurement requirements in IFRS 15 achieves consistency with US GAAP.

A separate project

The boards also considered whether they should consider the changes to the guidance on transfers of non-financial assets in a separate project. The boards noted that undertaking a separate project would mean that changes to existing Standards would not be made until that project had been completed and became effective. Because of the boards’ other standard-setting priorities, and the time required to complete all relevant due process steps for issuing a standard, it might be several years before the existing requirements were replaced. The boards observed that the implications of not proceeding with the proposed consequential amendments would have been as follows:

(a) for IFRS reporters, the IASB would have needed to amend IAS 16, IAS 38 and IAS 40 to include the revenue recognition criteria from previous revenue Standards in IFRS. This would have resulted in different recognition and measurement requirements for transfers of non-financial assets as compared to contracts with customers.

(b) for US GAAP reporters, there would have been two sets of recognition and measurement requirements for real estate sales, depending on whether the transfer was with a customer. In addition, no specific requirements would have been provided in US GAAP for transfers of
non-financial assets (other than real estate) within the scope of Subtopic 360-10 (for example, equipment) or Topic 350 (for example, intangible assets).

BC503 Consequently, the boards reaffirmed their decision in the 2011 Exposure Draft that consequential amendments should be made, because this results in consistency in the accounting for the transfers of non-financial assets between IFRS and US GAAP, addresses the lack of requirements for the accounting for transfers of non-financial assets in US GAAP and eliminates possible complexities that might result from retaining separate recognition criteria for transfers of non-financial assets in IFRS.

Transition for first-time adopters of IFRS

BC504 During redeliberations of the transition requirements, the IASB considered whether to amend IFRS 1 First-time Adoption of International Financial Reporting Standards to allow a first-time adopter of IFRS to use the same transition methods for adopting IFRS 15 as specified in paragraph C3 of IFRS 15 as follows:

(a) retrospectively to each prior period presented in accordance with IAS 8, subject to the practical expedients in paragraph C5 of IFRS 15; and

(b) retrospectively with the cumulative effect of initially applying IFRS 15 recognised at the date of initial application (for a first-time adopter of IFRS, this would be the entity’s first IFRS reporting period) in accordance with paragraphs C7–C8 of IFRS 15.

BC505 The IASB decided that the practical expedients in paragraph C5 of IFRS 15 should also apply to a first-time adopter, because both first-time adopters and entities that already apply IFRS would face similar challenges. The IASB observed that IFRS 1 requires that the accounting policies effective at the end of the first IFRS reporting period are applied to all reporting periods from the date of transition to IFRS onwards. This is identical to retrospective application for entities already applying IFRS. Some IASB members also noted that in many jurisdictions that have not yet adopted IFRS, revenue standards are similar to current IFRS. In those jurisdictions, the starting point for transition for a first-time adopter will be similar to entities already applying IFRS.

BC506 The IASB also clarified that, for any of the practical expedients in paragraph C5 of IFRS 15 that the entity uses, the entity should apply that expedient consistently to all reporting periods presented and disclose which expedients have been used, together with the estimated effect of applying those expedients (see paragraph C6 of IFRS 15).

BC507 Paragraphs BC439–BC444 explain the boards’ rationale for including an additional transition method in IFRS 15. That method requires an entity (that is not a first-time adopter of IFRS) to apply IFRS 15 retrospectively with the cumulative effect of initially applying IFRS 15 recognised in the current year (referred to as the ‘cumulative catch-up’ transition method). Using the cumulative catch-up transition method, an entity would apply the requirements
retrospectively only to contracts that are not completed at the beginning of the date of initial application (which, if applied to a first-time adopter would be the entity’s first IFRS reporting period).

However, the IASB decided not to amend IFRS 1 to permit first-time adopters of IFRS to use the cumulative catch-up transition method because it is not consistent with the principles of IFRS 1. This is because it would eliminate comparability within a first-time adopter’s first IFRS financial statements by providing relief from restating comparative years. The IASB also observed that the cumulative catch-up transition method may not reduce the burden of retrospective application because it would potentially require two separate reconciliations of equity—one for the transition to IFRS, which would be recognised in the earliest comparative period, and one for the transition to IFRS 15, which would be recognised at the beginning of the entity’s first IFRS reporting period. This would not only be challenging for preparers, but might also be confusing for users of financial statements.

Despite deciding not to amend IFRS 1 to allow first-time adopters to use the cumulative catch-up transition method, the IASB decided to amend IFRS 1 to provide an optional exemption for first-time adopters from the requirements of IFRS 15 in accounting for contracts completed before the earliest period presented. Under this exemption, a first-time adopter would not be required to restate all of its contracts for which it has recognised all of its revenue in accordance with its previous GAAP before the earliest period presented.

Summary of main changes from the 2011 Exposure Draft

The main changes from the proposals in the 2011 Exposure Draft are as follows:

(a) IFRS 15 includes additional requirements related to identifying a contract with a customer. Specifically, IFRS 15 includes an additional criterion that must be met before an entity can apply the requirements in IFRS 15 to a contract. This criterion in paragraph 9(e) of IFRS 15 requires an entity to conclude that it is probable that a customer will pay the consideration to which the entity will be entitled by assessing the customer’s ability and intention to pay. In addition, IFRS 15 provides guidance for accounting for contracts that do not meet the specified criteria and thus cannot apply IFRS 15.

(b) IFRS 15 clarifies the objective of the requirements for constraining estimates of variable consideration and provides a level of confidence of ‘highly probable’ for determining when to include those estimates in the transaction price. This represents a change from the 2011 Exposure Draft, which specified that an entity could only recognise revenue for estimates of variable consideration when an entity was ‘reasonably assured’ that it would be entitled to that amount.

(c) IFRS 15 provides additional guidance on the allocation of the transaction price to performance obligations:
the residual approach may be used for two or more goods or services with highly variable or uncertain stand-alone selling prices if at least one good or service has a stand-alone selling price that is not highly variable or uncertain; and

(ii) allocation of a discount among performance obligations should be done before using the residual approach to estimate the stand-alone selling price for a good or service with a highly variable or uncertain stand-alone selling price.

(d) IFRS 15 carries forward from the 2011 Exposure Draft the principles related to identifying performance obligations in a contract and determining whether a performance obligation is satisfied over time. However, IFRS 15 clarifies those principles and provides additional guidance for entities in applying those principles.

(e) IFRS 15 provides additional guidance for determining when a customer obtains control of a licence, by distinguishing between licences that provide a right to access the entity’s intellectual property as it exists throughout the licence period and licences that provide a right to use the entity’s intellectual property as it exists at the point in time at which the licence is granted. This determination will affect whether the entity satisfies its performance obligation to transfer a licence at a point in time or over time. This represents a change from the 2011 Exposure Draft, which specified that all licences were transferred to the customer at the point in time at which the customer obtained control of the rights. IFRS 15 also clarifies that before determining when the licence transfers to the customer, an entity considers the promises in the contract and applies the requirements for identifying performance obligations.

(f) IFRS 15 does not include the requirements proposed in the 2011 Exposure Draft to test a performance obligation to determine whether it is onerous.

(g) IFRS 15 clarifies the disclosures required for revenue from contracts with customers. Specifically, it requires an entity to provide a combination of qualitative and quantitative information about contract balances. The 2011 Exposure Draft required this disclosure to be provided as a reconciliation of contract balances.

(h) IFRS 15 provides entities with an additional transition method that does not require a restatement of prior periods. The 2011 Exposure Draft proposed only one transition method (ie a retrospective transition method with practical expedients) that requires a restatement of all previous periods presented.
Appendix A
Comparison of IFRS 15 and Topic 606

IFRS 15, together with the FASB’s Topic 606, completes a joint effort by the IASB and the FASB to improve financial reporting by creating a common revenue standard for IFRS and US GAAP that can be applied consistently across various transactions, industries and capital markets. In IFRS 15 and Topic 606, the boards achieved their goal of reaching the same conclusions on all requirements for the accounting for revenue from contracts with customers. However, there are some minor differences as follows:

(a) **Collectability threshold**—the boards included an explicit collectability threshold as one of the criteria that a contract must meet before an entity can recognise revenue. For a contract to meet that criterion, an entity must conclude that it is probable that it will collect the consideration to which it will be entitled in exchange for the goods or services that will be transferred to the customer. In setting the threshold, the boards acknowledged that the term ‘probable’ has different meanings in IFRS and in US GAAP. However, the boards decided to set the threshold at a level that is consistent with previous revenue recognition practices and requirements in IFRS and in US GAAP. (See paragraphs BC42–BC46.)

(b) **Interim disclosure requirements**—the boards noted that the general principles in their respective interim reporting requirements (IAS 34 *Interim Financial Reporting* and Topic 270 *Interim Reporting*) would apply to revenue from contracts with customers. However, the IASB decided to also amend IAS 34 to specifically require the disclosure of disaggregated information of revenue from contracts with customers in interim financial reports. The FASB similarly decided to amend Topic 270, to require a public entity to disclose disaggregated revenue information in interim financial reports, but also made amendments to require information about both contract balances and remaining performance obligations to be disclosed on an interim basis. (See paragraphs BC358–BC361.)

(c) **Early application and effective date**—paragraph C1 of IFRS 15 allows entities to apply the requirements early, whereas Topic 606 prohibits a public entity from applying the requirements earlier than the effective date. In addition, the effective date for IFRS 15 is for annual reporting periods beginning on or after 1 January 2017, whereas Topic 606 has an effective date for public entities for annual reporting periods beginning after 15 December 2016. (See paragraphs BC452–BC453.)

(d) **Impairment loss reversal**—paragraph 104 of IFRS 15 requires an entity to reverse impairment losses, which is consistent with the requirements for the impairment of assets within the scope of IAS 36 *Impairment of Assets*. In contrast, consistent with other areas of US GAAP, Topic 606 does not allow an entity to reverse an impairment loss on an asset that is recognised in accordance with the guidance on costs to obtain or fulfil a contract. (See paragraphs BC309–BC311.)
(e) **Non-public entity requirements**—there are no specific requirements included in IFRS 15 for non-public entities. Entities that do not have public accountability may apply *IFRS for Small and Medium-sized Entities*. Topic 606 applies to non-public entities, although some specific reliefs relating to disclosure, transition and effective date have been included in Topic 606 for non-public entities.

IFRS 15 and Topic 606 have been structured to be consistent with the style of other Standards in IFRS and US GAAP (respectively). As a result, the paragraph numbers of IFRS 15 and Topic 606 are not the same, even though the wording in the paragraphs is consistent. The following table illustrates how the paragraphs of IFRS 15 and Topic 606, and the related illustrative examples, correspond:

Appendix B
Amendments to the Basis for Conclusions on other Standards

The amendments in this appendix to the Basis for Conclusions on other Standards are necessary in order to ensure consistency with IFRS 15 and the related amendments to other Standards.

The amendments contained in this appendix when IFRS 15 was issued in 2014 have been incorporated into the Basis for Conclusions on the relevant Standards included in this volume.

APPENDIX

Amendments to guidance on other Standards
IFRS 15 Revenue from Contracts with Customers
Illustrative Examples

These examples accompany, but are not part of, IFRS 15. They illustrate aspects of IFRS 15 but are not intended to provide interpretative guidance.

IE1 These examples portray hypothetical situations illustrating how an entity might apply some of the requirements in IFRS 15 to particular aspects of a contract with a customer on the basis of the limited facts presented. The analysis in each example is not intended to represent the only manner in which the requirements could be applied, nor are the examples intended to apply only to the specific industry illustrated. Although some aspects of the examples may be present in actual fact patterns, all relevant facts and circumstances of a particular fact pattern would need to be evaluated when applying IFRS 15.

Identifying the contract

IE2 Examples 1–4 illustrate the requirements in paragraphs 9–16 of IFRS 15 on identifying the contract. In addition, the following requirements are illustrated in these examples:

(a) the interaction of paragraph 9 of IFRS 15 with paragraphs 47 and 52 of IFRS 15 on estimating variable consideration (Examples 2–3); and

(b) paragraph B63 of IFRS 15 on consideration in the form of sales-based or usage-based royalties on licences of intellectual property (Example 4).

Example 1—Collectability of the consideration

IE3 An entity, a real estate developer, enters into a contract with a customer for the sale of a building for CU1 million. The customer intends to open a restaurant in the building. The building is located in an area where new restaurants face high levels of competition and the customer has little experience in the restaurant industry.

IE4 The customer pays a non-refundable deposit of CU50,000 at inception of the contract and enters into a long-term financing agreement with the entity for the remaining 95 per cent of the promised consideration. The financing arrangement is provided on a non-recourse basis, which means that if the customer defaults, the entity can repossess the building, but cannot seek further compensation from the customer, even if the collateral does not cover the full value of the amount owed. The entity’s cost of the building is CU600,000. The customer obtains control of the building at contract inception.

IE5 In assessing whether the contract meets the criteria in paragraph 9 of IFRS 15, the entity concludes that the criterion in paragraph 9(e) of IFRS 15 is not met because it is not probable that the entity will collect the consideration to which it is entitled in exchange for the transfer of the building. In reaching this conclusion, the entity observes that the customer’s ability and intention to pay may be in doubt because of the following factors:

---

5 In these examples monetary amounts are denominated in ‘currency units’ (CU).
the customer intends to repay the loan (which has a significant balance) primarily from income derived from its restaurant business (which is a business facing significant risks because of high competition in the industry and the customer’s limited experience);

(b) the customer lacks other income or assets that could be used to repay the loan; and

(c) the customer’s liability under the loan is limited because the loan is non-recourse.

Because the criteria in paragraph 9 of IFRS 15 are not met, the entity applies paragraphs 15–16 of IFRS 15 to determine the accounting for the non-refundable deposit of CU50,000. The entity observes that none of the events described in paragraph 15 have occurred—that is, the entity has not received substantially all of the consideration and it has not terminated the contract. Consequently, in accordance with paragraph 16, the entity accounts for the non-refundable CU50,000 payment as a deposit liability. The entity continues to account for the initial deposit, as well as any future payments of principal and interest, as a deposit liability, until such time that the entity concludes that the criteria in paragraph 9 are met (ie the entity is able to conclude that it is probable that the entity will collect the consideration) or one of the events in paragraph 15 has occurred. The entity continues to assess the contract in accordance with paragraph 14 to determine whether the criteria in paragraph 9 are subsequently met or whether the events in paragraph 15 of IFRS 15 have occurred.

Example 2—Consideration is not the stated price—implicit price concession

An entity sells 1,000 units of a prescription drug to a customer for promised consideration of CU1 million. This is the entity’s first sale to a customer in a new region, which is experiencing significant economic difficulty. Thus, the entity expects that it will not be able to collect from the customer the full amount of the promised consideration. Despite the possibility of not collecting the full amount, the entity expects the region’s economy to recover over the next two to three years and determines that a relationship with the customer could help it to forge relationships with other potential customers in the region.

When assessing whether the criterion in paragraph 9(e) of IFRS 15 is met, the entity also considers paragraphs 47 and 52(b) of IFRS 15. Based on the assessment of the facts and circumstances, the entity determines that it expects to provide a price concession and accept a lower amount of consideration from the customer. Accordingly, the entity concludes that the transaction price is not CU1 million and, therefore, the promised consideration is variable. The entity estimates the variable consideration and determines that it expects to be entitled to CU400,000.

The entity considers the customer’s ability and intention to pay the consideration and concludes that even though the region is experiencing economic difficulty, it is probable that it will collect CU400,000 from the customer. Consequently, the entity concludes that the criterion in paragraph 9(e) of IFRS 15 is met based on an estimate of variable consideration of CU400,000. In addition, on the basis of an evaluation of the contract terms
and other facts and circumstances, the entity concludes that the other criteria in paragraph 9 of IFRS 15 are also met. Consequently, the entity accounts for the contract with the customer in accordance with the requirements in IFRS 15.

Example 3—Implicit price concession

IE10  An entity, a hospital, provides medical services to an uninsured patient in the emergency room. The entity has not previously provided medical services to this patient but is required by law to provide medical services to all emergency room patients. Because of the patient’s condition upon arrival at the hospital, the entity provides the services immediately and, therefore, before the entity can determine whether the patient is committed to perform its obligations under the contract in exchange for the medical services provided. Consequently, the contract does not meet the criteria in paragraph 9 of IFRS 15 and, in accordance with paragraph 14 of IFRS 15, the entity will continue to assess its conclusion based on updated facts and circumstances.

IE11  After providing services, the entity obtains additional information about the patient including a review of the services provided, standard rates for such services and the patient’s ability and intention to pay the entity for the services provided. During the review, the entity notes its standard rate for the services provided in the emergency room is CU10,000. The entity also reviews the patient’s information and to be consistent with its policies designates the patient to a customer class based on the entity’s assessment of the patient’s ability and intention to pay.

IE12  Before reassessing whether the criteria in paragraph 9 of IFRS 15 have been met, the entity considers paragraphs 47 and 52(b) of IFRS 15. Although the standard rate for the services is CU10,000 (which may be the amount invoiced to the patient), the entity expects to accept a lower amount of consideration in exchange for the services. Accordingly, the entity concludes that the transaction price is not CU10,000 and, therefore, the promised consideration is variable. The entity reviews its historical cash collections from this customer class and other relevant information about the patient. The entity estimates the variable consideration and determines that it expects to be entitled to CU1,000.

IE13  In accordance with paragraph 9(e) of IFRS 15, the entity evaluates the patient’s ability and intention to pay (ie the credit risk of the patient). On the basis of its collection history from patients in this customer class, the entity concludes it is probable that the entity will collect CU1,000 (which is the estimate of variable consideration). In addition, on the basis of an assessment of the contract terms and other facts and circumstances, the entity concludes that the other criteria in paragraph 9 of IFRS 15 are also met. Consequently, the entity accounts for the contract with the patient in accordance with the requirements in IFRS 15.

Example 4—Reassessing the criteria for identifying a contract

IE14  An entity licences a patent to a customer in exchange for a usage-based royalty. At contract inception, the contract meets all the criteria in paragraph 9 of IFRS 15 and the entity accounts for the contract with the customer in
accordance with the requirements in IFRS 15. The entity recognises revenue 
when the customer’s subsequent usage occurs in accordance with 
paragraph B63 of IFRS 15.

IE15 Throughout the first year of the contract, the customer provides quarterly 
reports of usage and pays within the agreed-upon period.

IE16 During the second year of the contract, the customer continues to use the 
entity’s patent, but the customer’s financial condition declines. The customer’s 
current access to credit and available cash on hand are limited. The entity 
continues to recognise revenue on the basis of the customer’s usage throughout 
the second year. The customer pays the first quarter’s royalties but makes 
nominal payments for the usage of the patent in Quarters 2–4. The entity 
accounts for any impairment of the existing receivable in accordance with 
IFRS 9 Financial Instruments.

IE17 During the third year of the contract, the customer continues to use the entity’s 
patent. However, the entity learns that the customer has lost access to credit 
and its major customers and thus the customer’s ability to pay significantly 
deteriorates. The entity therefore concludes that it is unlikely that the customer 
will be able to make any further royalty payments for ongoing usage of the 
entity’s patent. As a result of this significant change in facts and circumstances, 
in accordance with paragraph 13 of IFRS 15, the entity reassesses the criteria in 
paragraph 9 of IFRS 15 and determines that they are not met because it is no 
longer probable that the entity will collect the consideration to which it will be 
etitled. Accordingly, the entity does not recognise any further revenue 
associated with the customer’s future usage of its patent. The entity accounts 
for any impairment of the existing receivable in accordance with IFRS 9 Financial 
Instruments.

Contract modifications

IE18 Examples 5–9 illustrate the requirements in paragraphs 18–21 of IFRS 15 on 
contract modifications. In addition, the following requirements are illustrated 
in these examples:

(a) paragraphs 22–30 of IFRS 15 on identifying performance obligations 
(Examples 7–8);

(b) paragraphs 56–58 of IFRS 15 on constraining estimates of variable 
consideration (Examples 6 and 8–9); and

(c) paragraphs 87–90 of IFRS 15 on changes in the transaction price 
(Example 6).

Example 5—Modification of a contract for goods

IE19 An entity promises to sell 120 products to a customer for CU12,000 (CU100 per 
product). The products are transferred to the customer over a six-month period. 
The entity transfers control of each product at a point in time. After the entity 
has transferred control of 60 products to the customer, the contract is modified
to require the delivery of an additional 30 products (a total of 150 identical products) to the customer. The additional 30 products were not included in the initial contract.

Case A—Additional products for a price that reflects the stand-alone selling price

IE20 When the contract is modified, the price of the contract modification for the additional 30 products is an additional CU2,850 or CU95 per product. The pricing for the additional products reflects the stand-alone selling price of the products at the time of the contract modification and the additional products are distinct (in accordance with paragraph 27 of IFRS 15) from the original products.

IE21 In accordance with paragraph 20 of IFRS 15, the contract modification for the additional 30 products is, in effect, a new and separate contract for future products that does not affect the accounting for the existing contract. The entity recognises revenue of CU100 per product for the 120 products in the original contract and CU95 per product for the 30 products in the new contract.

Case B—Additional products for a price that does not reflect the stand-alone selling price

IE22 During the process of negotiating the purchase of an additional 30 products, the parties initially agree on a price of CU80 per product. However, the customer discovers that the initial 60 products transferred to the customer contained minor defects that were unique to those delivered products. The entity promises a partial credit of CU15 per product to compensate the customer for the poor quality of those products. The entity and the customer agree to incorporate the credit of CU900 (CU15 credit × 60 products) into the price that the entity charges for the additional 30 products. Consequently, the contract modification specifies that the price of the additional 30 products is CU1,500 or CU50 per product. That price comprises the agreed-upon price for the additional 30 products of CU2,400, or CU80 per product, less the credit of CU900.

IE23 At the time of modification, the entity recognises the CU900 as a reduction of the transaction price and, therefore, as a reduction of revenue for the initial 60 products transferred. In accounting for the sale of the additional 30 products, the entity determines that the negotiated price of CU80 per product does not reflect the stand-alone selling price of the additional products. Consequently, the contract modification does not meet the conditions in paragraph 20 of IFRS 15 to be accounted for as a separate contract. Because the remaining products to be delivered are distinct from those already transferred, the entity applies the requirements in paragraph 21(a) of IFRS 15 and accounts for the modification as a termination of the original contract and the creation of a new contract.

IE24 Consequently, the amount recognised as revenue for each of the remaining products is a blended price of CU93.33 \( \left( \frac{\left( \left( CU100 \times 60 \text{ products not yet transferred under the original contract} \right) + \left( CU80 \times 30 \text{ products to be transferred under the contract modification} \right) \right)}{90 \text{ remaining products}} \right) \).
Example 6—Change in the transaction price after a contract modification

IE25 On 1 July 20X0, an entity promises to transfer two distinct products to a customer. Product X transfers to the customer at contract inception and Product Y transfers on 31 March 20X1. The consideration promised by the customer includes fixed consideration of CU1,000 and variable consideration that is estimated to be CU200. The entity includes its estimate of variable consideration in the transaction price because it concludes that it is highly probable that a significant reversal in cumulative revenue recognised will not occur when the uncertainty is resolved. [Refer: paragraph 56]

IE26 The transaction price of CU1,200 is allocated equally to the performance obligation for Product X and the performance obligation for Product Y. This is because both products have the same stand-alone selling prices and the variable consideration does not meet the criteria in paragraph 85 that requires allocation of the variable consideration to one but not both of the performance obligations.

IE27 When Product X transfers to the customer at contract inception, the entity recognises revenue of CU600.

IE28 On 30 November 20X0, the scope of the contract is modified to include the promise to transfer Product Z (in addition to the undelivered Product Y) to the customer on 30 June 20X1 and the price of the contract is increased by CU300 (fixed consideration), which does not represent the stand-alone selling price of Product Z. The stand-alone selling price of Product Z is the same as the stand-alone selling prices of Products X and Y.

IE29 The entity accounts for the modification as if it were the termination of the existing contract and the creation of a new contract. This is because the remaining Products Y and Z are distinct from Product X, which had transferred to the customer before the modification, and the promised consideration for the additional Product Z does not represent its stand-alone selling price. Consequently, in accordance with paragraph 21(a) of IFRS 15, the consideration to be allocated to the remaining performance obligations comprises the consideration that had been allocated to the performance obligation for Product Y (which is measured at an allocated transaction price amount of CU600) and the consideration promised in the modification (fixed consideration of CU300). The transaction price for the modified contract is CU900 and that amount is allocated equally to the performance obligation for Product Y and the performance obligation for Product Z (ie CU450 is allocated to each performance obligation).

IE30 After the modification but before the delivery of Products Y and Z, the entity revises its estimate of the amount of variable consideration to which it expects to be entitled to CU240 (rather than the previous estimate of CU200). The entity concludes that the change in estimate of the variable consideration can be included in the transaction price, because it is highly probable that a significant reversal in cumulative revenue recognised will not occur when the uncertainty is resolved. Even though the modification was accounted for as if it were the termination of the existing contract and the creation of a new contract in accordance with paragraph 21(a) of IFRS 15, the increase in the transaction price
of CU40 is attributable to variable consideration promised before the modification. Therefore, in accordance with paragraph 90 of IFRS 15, the change in the transaction price is allocated to the performance obligations for Product X and Product Y on the same basis as at contract inception. Consequently, the entity recognises revenue of CU20 for Product X in the period in which the change in the transaction price occurs. Because Product Y had not transferred to the customer before the contract modification, the change in the transaction price that is attributable to Product Y is allocated to the remaining performance obligations at the time of the contract modification. This is consistent with the accounting that would have been required by paragraph 21(a) of IFRS 15 if that amount of variable consideration had been estimated and included in the transaction price at the time of the contract modification.

IE31 The entity also allocates the CU20 increase in the transaction price for the modified contract equally to the performance obligations for Product Y and Product Z. This is because the products have the same stand-alone selling prices and the variable consideration does not meet the criteria in paragraph 85 that require allocation of the variable consideration to one but not both of the performance obligations. Consequently, the amount of the transaction price allocated to the performance obligations for Product Y and Product Z increases by CU10 to CU460 each.

IE32 On 31 March 20X1, Product Y is transferred to the customer and the entity recognises revenue of CU460. On 30 June 20X1, Product Z is transferred to the customer and the entity recognises revenue of CU460.

Example 7—Modification of a services contract

IE33 An entity enters into a three-year contract to clean a customer’s offices on a weekly basis. The customer promises to pay CU100,000 per year. The stand-alone selling price of the services at contract inception is CU100,000 per year. The entity recognises revenue of CU100,000 per year during the first two years of providing services. At the end of the second year, the contract is modified and the fee for the third year is reduced to CU80,000. In addition, the customer agrees to extend the contract for three additional years for consideration of CU200,000 payable in three equal annual instalments of CU66,667 at the beginning of years 4, 5 and 6. After the modification, the contract has four years remaining in exchange for total consideration of CU280,000. The stand-alone selling price of the services at the beginning of the third year is CU80,000 per year. The entity’s stand-alone selling price at the beginning of the third year, multiplied by the remaining number of years to provide services, is deemed to be an appropriate estimate of the stand-alone selling price of the multi-year contract (ie the stand-alone selling price is 4 years \( \times \) CU80,000 per year = CU320,000).

IE34 At contract inception, the entity assesses that each week of cleaning service is distinct in accordance with paragraph 27 of IFRS 15. Notwithstanding that each week of cleaning service is distinct, the entity accounts for the cleaning contract as a single performance obligation in accordance with paragraph 22(b) of IFRS 15. This is because the weekly cleaning services are a series of distinct services that are substantially the same and have the same pattern of transfer to
the customer (the services transfer to the customer over time and use the same method to measure progress—that is, a time-based measure of progress).

IE35 At the date of the modification, the entity assesses the remaining services to be provided and concludes that they are distinct. However, the amount of remaining consideration to be paid (CU280,000) does not reflect the stand-alone selling price of the services to be provided (CU320,000).

IE36 Consequently, the entity accounts for the modification in accordance with paragraph 21(a) of IFRS 15 as a termination of the original contract and the creation of a new contract with consideration of CU280,000 for four years of cleaning service. The entity recognises revenue of CU70,000 per year (CU280,000 ÷ 4 years) as the services are provided over the remaining four years.

**Example 8—Modification resulting in a cumulative catch-up adjustment to revenue**

IE37 An entity, a construction company, enters into a contract to construct a commercial building for a customer on customer-owned land for promised consideration of CU1 million and a bonus of CU200,000 if the building is completed within 24 months. The entity accounts for the promised bundle of goods and services as a single performance obligation satisfied over time in accordance with paragraph 35(b) of IFRS 15 because the customer controls the building during construction. At the inception of the contract, the entity expects the following:

<table>
<thead>
<tr>
<th><strong>CU</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Transaction price</td>
</tr>
<tr>
<td>Expected costs</td>
</tr>
<tr>
<td>Expected profit (30%)</td>
</tr>
</tbody>
</table>

IE38 At contract inception, the entity excludes the CU200,000 bonus from the transaction price because it cannot conclude that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur. Completion of the building is highly susceptible to factors outside the entity’s influence, including weather and regulatory approvals. In addition, the entity has limited experience with similar types of contracts. [Refer: paragraphs 56 and 57]

IE39 The entity determines that the input measure, on the basis of costs incurred, provides an appropriate measure of progress towards complete satisfaction of the performance obligation. By the end of the first year, the entity has satisfied 60 per cent of its performance obligation on the basis of costs incurred to date (CU420,000) relative to total expected costs (CU700,000). The entity reassesses the variable consideration and concludes that the amount is still constrained in accordance with paragraphs 56–58 of IFRS 15. Consequently, the cumulative revenue and costs recognised for the first year are as follows:
In the first quarter of the second year, the parties to the contract agree to modify the contract by changing the floor plan of the building. As a result, the fixed consideration and expected costs increase by CU150,000 and CU120,000, respectively. Total potential consideration after the modification is CU1,350,000 (CU1,150,000 fixed consideration + CU200,000 completion bonus). In addition, the allowable time for achieving the CU200,000 bonus is extended by 6 months to 30 months from the original contract inception date. At the date of the modification, on the basis of its experience and the remaining work to be performed, which is primarily inside the building and not subject to weather conditions, the entity concludes that it is highly probable that including the bonus in the transaction price will not result in a significant reversal in the amount of cumulative revenue recognised in accordance with paragraph 56 of IFRS 15 and includes the CU200,000 in the transaction price. In assessing the contract modification, the entity evaluates paragraph 27(b) of IFRS 15 and concludes (on the basis of the factors in paragraph 29 of IFRS 15) that the remaining goods and services to be provided using the modified contract are not distinct from the goods and services transferred on or before the date of contract modification; that is, the contract remains a single performance obligation.

Consequently, the entity accounts for the contract modification as if it were part of the original contract (in accordance with paragraph 21(b) of IFRS 15). The entity updates its measure of progress and estimates that it has satisfied 51.2 per cent of its performance obligation (CU420,000 actual costs incurred ÷ CU820,000 total expected costs). The entity recognises additional revenue of CU91,200 [(51.2 per cent complete × CU1,350,000 modified transaction price) – CU600,000 revenue recognised to date] at the date of the modification as a cumulative catch-up adjustment.

Example 9—Unapproved change in scope and price

An entity enters into a contract with a customer to construct a building on customer-owned land. The contract states that the customer will provide the entity with access to the land within 30 days of contract inception. However, the entity was not provided access until 120 days after contract inception because of storm damage to the site that occurred after contract inception. The contract specifically identifies any delay (including force majeure) in the entity’s access to customer-owned land as an event that entitles the entity to compensation that is equal to actual costs incurred as a direct result of the delay. The entity is able to demonstrate that the specific direct costs were incurred as a result of the delay in accordance with the terms of the contract and prepares a claim. The customer initially disagreed with the entity’s claim.

The entity assesses the legal basis of the claim and determines, on the basis of the underlying contractual terms, that it has enforceable rights. Consequently, it accounts for the claim as a contract modification in accordance with
paragraphs 18–21 of IFRS 15. The modification does not result in any additional goods and services being provided to the customer. In addition, all of the remaining goods and services after the modification are not distinct and form part of a single performance obligation. Consequently, the entity accounts for the modification in accordance with paragraph 21(b) of IFRS 15 by updating the transaction price and the measure of progress towards complete satisfaction of the performance obligation. The entity considers the constraint on estimates of variable consideration in paragraphs 56–58 of IFRS 15 when estimating the transaction price.

Identifying performance obligations

IE44 Examples 10–12 illustrate the requirements in paragraphs 22–30 of IFRS 15 on identifying performance obligations.

Example 10—Goods and services are not distinct

An entity, a contractor, enters into a contract to build a hospital for a customer. The entity is responsible for the overall management of the project and identifies various goods and services to be provided, including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment and finishing.

The promised goods and services are capable of being distinct in accordance with paragraph 27(a) of IFRS 15. That is, the customer can benefit from the goods and services either on their own or together with other readily available resources. This is evidenced by the fact that the entity, or competitors of the entity, regularly sells many of these goods and services separately to other customers. In addition, the customer could generate economic benefit from the individual goods and services by using, consuming, selling or holding those goods or services.

However, the goods and services are not distinct within the context of the contract in accordance with paragraph 27(b) of IFRS 15 (on the basis of the factors in paragraph 29 of IFRS 15). That is, the entity’s promise to transfer individual goods and services in the contract are not separately identifiable from other promises in the contract. This is evidenced by the fact that the entity provides a significant service of integrating the goods and services (the inputs) into the hospital (the combined output) for which the customer has contracted.

Because both criteria in paragraph 27 of IFRS 15 are not met, the goods and services are not distinct. The entity accounts for all of the goods and services in the contract as a single performance obligation.

Example 11—Determining whether goods or services are distinct

Case A—Distinct goods or services

An entity, a software developer, enters into a contract with a customer to transfer a software licence, perform an installation service and provide unspecified software updates and technical support (online and telephone) for a two-year period. The entity sells the licence, installation service and technical
support separately. The installation service includes changing the web screen for each type of user (for example, marketing, inventory management and information technology). The installation service is routinely performed by other entities and does not significantly modify the software. The software remains functional without the updates and the technical support.

IE50 The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. The entity observes that the software is delivered before the other goods and services and remains functional without the updates and the technical support. Thus, the entity concludes that the customer can benefit from each of the goods and services either on their own or together with the other goods and services that are readily available and the criterion in paragraph 27(a) of IFRS 15 is met.

IE51 The entity also considers the factors in paragraph 29 of IFRS 15 and determines that the promise to transfer each good and service to the customer is separately identifiable from each of the other promises (thus the criterion in paragraph 27(b) of IFRS 15 is met). In particular, the entity observes that the installation service does not significantly modify or customise the software itself and, as such, the software and the installation service are separate outputs promised by the entity instead of inputs used to produce a combined output.

IE52 On the basis of this assessment, the entity identifies four performance obligations in the contract for the following goods or services:

(a) the software licence;
(b) an installation service;
(c) software updates; and
(d) technical support.

IE53 The entity applies paragraphs 31–38 of IFRS 15 to determine whether each of the performance obligations for the installation service, software updates and technical support are satisfied at a point in time or over time. The entity also assesses the nature of the entity’s promise to transfer the software licence in accordance with paragraph B58 of IFRS 15 (see Example 54 in paragraphs IE276–IE277).

Case B—Significant customisation

IE54 The promised goods and services are the same as in Case A, except that the contract specifies that, as part of the installation service, the software is to be substantially customised to add significant new functionality to enable the software to interface with other customised software applications used by the customer. The customised installation service can be provided by other entities.

IE55 The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. The entity observes that the terms of the contract result in a promise to provide a significant service of integrating the licenced software into the existing software system by performing a customised installation service as specified in the contract. In other words, the entity is
using the licence and the customised installation service as inputs to produce the combined output (ie a functional and integrated software system) specified in the contract (see paragraph 29(a) of IFRS 15). In addition, the software is significantly modified and customised by the service (see paragraph 29(b) of IFRS 15). Although the customised installation service can be provided by other entities, the entity determines that within the context of the contract, the promise to transfer the licence is not separately identifiable from the customised installation service and, therefore, the criterion in paragraph 27(b) of IFRS 15 (on the basis of the factors in paragraph 29 of IFRS 15) is not met. Thus, the software licence and the customised installation service are not distinct.

IE56 As in Case A, the entity concludes that the software updates and technical support are distinct from the other promises in the contract. This is because the customer can benefit from the updates and technical support either on their own or together with the other goods and services that are readily available and because the promise to transfer the software updates and the technical support to the customer are separately identifiable from each of the other promises.

IE57 On the basis of this assessment, the entity identifies three performance obligations in the contract for the following goods or services:

(a) customised installation service (that includes the software licence);
(b) software updates; and
(c) technical support.

IE58 The entity applies paragraphs 31–38 of IFRS 15 to determine whether each performance obligation is satisfied at a point in time or over time.

Example 12—Explicit and implicit promises in a contract

IE59 An entity, a manufacturer, sells a product to a distributor (ie its customer) who will then resell it to an end customer.

Case A—Explicit promise of service

IE60 In the contract with the distributor, the entity promises to provide maintenance services for no additional consideration (ie ‘free’) to any party (ie the end customer) that purchases the product from the distributor. The entity outsources the performance of the maintenance services to the distributor and pays the distributor an agreed-upon amount for providing those services on the entity’s behalf. If the end customer does not use the maintenance services, the entity is not obliged to pay the distributor.

IE61 Because the promise of maintenance services is a promise to transfer goods or services in the future and is part of the negotiated exchange between the entity and the distributor, the entity determines that the promise to provide maintenance services is a performance obligation (see paragraph 26(g) of IFRS 15). The entity concludes that the promise would represent a performance obligation regardless of whether the entity, the distributor, or a third party provides the service. Consequently, the entity allocates a portion of the transaction price to the promise to provide maintenance services.
Case B—Implicit promise of service

IE62 The entity has historically provided maintenance services for no additional consideration (ie 'free') to end customers that purchase the entity’s product from the distributor. The entity does not explicitly promise maintenance services during negotiations with the distributor and the final contract between the entity and the distributor does not specify terms or conditions for those services.

IE63 However, on the basis of its customary business practice, the entity determines at contract inception that it has made an implicit promise to provide maintenance services as part of the negotiated exchange with the distributor. That is, the entity’s past practices of providing these services create valid expectations of the entity’s customers (ie the distributor and end customers) in accordance with paragraph 24 of IFRS 15. Consequently, the entity identifies the promise of maintenance services as a performance obligation to which it allocates a portion of the transaction price.

Case C—Services are not a performance obligation

IE64 In the contract with the distributor, the entity does not promise to provide any maintenance services. In addition, the entity typically does not provide maintenance services and, therefore, the entity’s customary business practices, published policies and specific statements at the time of entering into the contract have not created an implicit promise to provide goods or services to its customers. The entity transfers control of the product to the distributor and, therefore, the contract is completed. However, before the sale to the end customer, the entity makes an offer to provide maintenance services to any party that purchases the product from the distributor for no additional promised consideration.

IE65 The promise of maintenance is not included in the contract between the entity and the distributor at contract inception. That is, in accordance with paragraph 24 of IFRS 15, the entity does not explicitly or implicitly promise to provide maintenance services to the distributor or the end customers. Consequently, the entity does not identify the promise to provide maintenance services as a performance obligation. Instead, the obligation to provide maintenance services is accounted for in accordance with IAS 37 Provisions, Contingent Liabilities and Contingent Assets.

Performance obligations satisfied over time

IE66 Examples 13–17 illustrate the requirements in paragraphs 35–37 and B2–B13 of IFRS 15 on performance obligations satisfied over time. In addition, the following requirements are illustrated in these examples:

(a) paragraphs 35(a) and B3–B4 of IFRS 15 on when a customer simultaneously receives and consumes the benefits provided by the entity’s performance as the entity performs (Examples 13–14);

(b) paragraphs 38(c), 36–37 and B6–B13 of IFRS 15 on an entity’s performance that does not create an asset with an alternative use and an entity’s enforceable right to payment for performance completed to date (Examples 14–17); and
(c) paragraph 38 of IFRS 15 on performance obligations satisfied at a point in time (Example 17).

Example 13—Customer simultaneously receives and consumes the benefits

IE67 An entity enters into a contract to provide monthly payroll processing services to a customer for one year.

IE68 The promised payroll processing services are accounted for as a single performance obligation in accordance with paragraph 22(b) of IFRS 15. The performance obligation is satisfied over time in accordance with paragraph 35(a) of IFRS 15 because the customer simultaneously receives and consumes the benefits of the entity’s performance in processing each payroll transaction as and when each transaction is processed. The fact that another entity would not need to re-perform payroll processing services for the service that the entity has provided to date also demonstrates that the customer simultaneously receives and consumes the benefits of the entity’s performance as the entity performs. (The entity disregards any practical limitations on transferring the remaining performance obligation, including setup activities that would need to be undertaken by another entity.) The entity recognises revenue over time by measuring its progress towards complete satisfaction of that performance obligation in accordance with paragraphs 39–45 and B14–B19 of IFRS 15.

Example 14—Assessing alternative use and right to payment

IE69 An entity enters into a contract with a customer to provide a consulting service that results in the entity providing a professional opinion to the customer. The professional opinion relates to facts and circumstances that are specific to the customer. If the customer were to terminate the consulting contract for reasons other than the entity’s failure to perform as promised, the contract requires the customer to compensate the entity for its costs incurred plus a 15 per cent margin. The 15 per cent margin approximates the profit margin that the entity earns from similar contracts.

IE70 The entity considers the criterion in paragraph 35(a) of IFRS 15 and the requirements in paragraphs B3 and B4 of IFRS 15 to determine whether the customer simultaneously receives and consumes the benefits of the entity’s performance. If the entity were to be unable to satisfy its obligation and the customer hired another consulting firm to provide the opinion, the other consulting firm would need to substantially re-perform the work that the entity had completed to date, because the other consulting firm would not have the benefit of any work in progress performed by the entity. The nature of the professional opinion is such that the customer will receive the benefits of the entity’s performance only when the customer receives the professional opinion. Consequently, the entity concludes that the criterion in paragraph 35(a) of IFRS 15 is not met.

IE71 However, the entity’s performance obligation meets the criterion in paragraph 35(c) of IFRS 15 and is a performance obligation satisfied over time because of both of the following factors:
(a) in accordance with paragraphs 36 and B6–B8 of IFRS 15, the development of the professional opinion does not create an asset with alternative use to the entity because the professional opinion relates to facts and circumstances that are specific to the customer. Therefore, there is a practical limitation on the entity’s ability to readily direct the asset to another customer.

(b) in accordance with paragraphs 37 and B9–B13 of IFRS 15, the entity has an enforceable right to payment for its performance completed to date for its costs plus a reasonable margin, which approximates the profit margin in other contracts.

Consequently, the entity recognises revenue over time by measuring the progress towards complete satisfaction of the performance obligation in accordance with paragraphs 39–45 and B14–B19 of IFRS 15.

Example 15—Asset has no alternative use to the entity

An entity enters into a contract with a customer, a government agency, to build a specialised satellite. The entity builds satellites for various customers, such as governments and commercial entities. The design and construction of each satellite differ substantially, on the basis of each customer’s needs and the type of technology that is incorporated into the satellite.

At contract inception, the entity assesses whether its performance obligation to build the satellite is a performance obligation satisfied over time in accordance with paragraph 35 of IFRS 15.

As part of that assessment, the entity considers whether the satellite in its completed state will have an alternative use to the entity. Although the contract does not preclude the entity from directing the completed satellite to another customer, the entity would incur significant costs to rework the design and function of the satellite to direct that asset to another customer. Consequently, the asset has no alternative use to the entity (see paragraphs 35(c), 36 and B6–B8 of IFRS 15) because the customer-specific design of the satellite limits the entity’s practical ability to readily direct the satellite to another customer.

For the entity’s performance obligation to be satisfied over time when building the satellite, paragraph 35(c) of IFRS 15 also requires the entity to have an enforceable right to payment for performance completed to date. This condition is not illustrated in this example.

Example 16—Enforceable right to payment for performance completed to date

An entity enters into a contract with a customer to build an item of equipment. The payment schedule in the contract specifies that the customer must make an advance payment at contract inception of 10 per cent of the contract price, regular payments throughout the construction period (amounting to 50 per cent of the contract price) and a final payment of 40 per cent of the contract price after construction is completed and the equipment has passed the prescribed performance tests. The payments are non-refundable unless the entity fails to perform as promised. If the customer terminates the contract, the entity is
entitled only to retain any progress payments received from the customer. The entity has no further rights to compensation from the customer.

IE78 At contract inception, the entity assesses whether its performance obligation to build the equipment is a performance obligation satisfied over time in accordance with paragraph 35 of IFRS 15.

IE79 As part of that assessment, the entity considers whether it has an enforceable right to payment for performance completed to date in accordance with paragraphs 35(c), 37 and B9–B13 of IFRS 15 if the customer were to terminate the contract for reasons other than the entity’s failure to perform as promised. Even though the payments made by the customer are non-refundable, the cumulative amount of those payments is not expected, at all times throughout the contract, to at least correspond to the amount that would be necessary to compensate the entity for performance completed to date. This is because at various times during construction the cumulative amount of consideration paid by the customer might be less than the selling price of the partially completed item of equipment at that time. Consequently, the entity does not have a right to payment for performance completed to date.

IE80 Because the entity does not have a right to payment for performance completed to date, the entity’s performance obligation is not satisfied over time in accordance with paragraph 35(c) of IFRS 15. Accordingly, the entity does not need to assess whether the equipment would have an alternative use to the entity. The entity also concludes that it does not meet the criteria in paragraph 35(a) or (b) of IFRS 15 and thus, the entity accounts for the construction of the equipment as a performance obligation satisfied at a point in time in accordance with paragraph 38 of IFRS 15.

Example 17—Assessing whether a performance obligation is satisfied at a point in time or over time

IE81 An entity is developing a multi-unit residential complex. A customer enters into a binding sales contract with the entity for a specified unit that is under construction. Each unit has a similar floor plan and is of a similar size, but other attributes of the units are different (for example, the location of the unit within the complex).

Case A—Entity does not have an enforceable right to payment for performance completed to date

IE82 The customer pays a deposit upon entering into the contract and the deposit is refundable only if the entity fails to complete construction of the unit in accordance with the contract. The remainder of the contract price is payable on completion of the contract when the customer obtains physical possession of the unit. If the customer defaults on the contract before completion of the unit, the entity only has the right to retain the deposit.

IE83 At contract inception, the entity applies paragraph 35(c) of IFRS 15 to determine whether its promise to construct and transfer the unit to the customer is a performance obligation satisfied over time. The entity determines that it does not have an enforceable right to payment for performance completed to date because, until construction of the unit is complete, the entity only has a right to
the deposit paid by the customer. Because the entity does not have a right to payment for work completed to date, the entity’s performance obligation is not a performance obligation satisfied over time in accordance with paragraph 35(c) of IFRS 15. Instead, the entity accounts for the sale of the unit as a performance obligation satisfied at a point in time in accordance with paragraph 38 of IFRS 15.

Case B—Entity has an enforceable right to payment for performance completed to date

The customer pays a non-refundable deposit upon entering into the contract and will make progress payments during construction of the unit. The contract has substantive terms that preclude the entity from being able to direct the unit to another customer. In addition, the customer does not have the right to terminate the contract unless the entity fails to perform as promised. If the customer defaults on its obligations by failing to make the promised progress payments as and when they are due, the entity would have a right to all of the consideration promised in the contract if it completes the construction of the unit. The courts have previously upheld similar rights that entitle developers to require the customer to perform, subject to the entity meeting its obligations under the contract.

At contract inception, the entity applies paragraph 35(c) of IFRS 15 to determine whether its promise to construct and transfer the unit to the customer is a performance obligation satisfied over time. The entity determines that the asset (unit) created by the entity’s performance does not have an alternative use to the entity because the contract precludes the entity from transferring the specified unit to another customer. The entity does not consider the possibility of a contract termination in assessing whether the entity is able to direct the asset to another customer.

The entity also has a right to payment for performance completed to date in accordance with paragraphs 37 and B9–B13 of IFRS 15. This is because if the customer were to default on its obligations, the entity would have an enforceable right to all of the consideration promised under the contract if it continues to perform as promised.

Therefore, the terms of the contract and the practices in the legal jurisdiction indicate that there is a right to payment for performance completed to date. Consequently, the criteria in paragraph 35(c) of IFRS 15 are met and the entity has a performance obligation that it satisfies over time. To recognise revenue for that performance obligation satisfied over time, the entity measures its progress towards complete satisfaction of its performance obligation in accordance with paragraphs 39–45 and B14–B19 of IFRS 15.

In the construction of a multi-unit residential complex, the entity may have many contracts with individual customers for the construction of individual units within the complex. The entity would account for each contract separately. However, depending on the nature of the construction, the entity’s performance in undertaking the initial construction works (ie the foundation and the basic structure), as well as the construction of common areas, may need
to be reflected when measuring its progress towards complete satisfaction of its performance obligations in each contract.

*Case C—Entity has an enforceable right to payment for performance completed to date*

IE89 The same facts as in Case B apply to Case C, except that in the event of a default by the customer, either the entity can require the customer to perform as required under the contract or the entity can cancel the contract in exchange for the asset under construction and an entitlement to a penalty of a proportion of the contract price.

IE90 Notwithstanding that the entity could cancel the contract (in which case the customer’s obligation to the entity would be limited to transferring control of the partially completed asset to the entity and paying the penalty prescribed), the entity has a right to payment for performance completed to date because the entity could also choose to enforce its rights to full payment under the contract. The fact that the entity may choose to cancel the contract in the event the customer defaults on its obligations would not affect that assessment (see paragraph B11 of IFRS 15), provided that the entity’s rights to require the customer to continue to perform as required under the contract (ie pay the promised consideration) are enforceable.

**Measuring progress towards complete satisfaction of a performance obligation**

IE91 Examples 18–19 illustrate the requirements in paragraphs 39–45 of IFRS 15 on measuring progress towards complete satisfaction of a performance obligation satisfied over time. Example 19 also illustrates the requirements in paragraph B19 of IFRS 15 on uninstalled materials when costs incurred are not proportionate to the entity’s progress in satisfying a performance obligation. [Refer also: Illustrative Examples, example 58]

**Example 18—Measuring progress when making goods or services available**

IE92 An entity, an owner and manager of health clubs, enters into a contract with a customer for one year of access to any of its health clubs. The customer has unlimited use of the health clubs and promises to pay CU100 per month.

IE93 The entity determines that its promise to the customer is to provide a service of making the health clubs available for the customer to use as and when the customer wishes. This is because the extent to which the customer uses the health clubs does not affect the amount of the remaining goods and services to which the customer is entitled. The entity concludes that the customer simultaneously receives and consumes the benefits of the entity’s performance as it performs by making the health clubs available. Consequently, the entity’s performance obligation is satisfied over time in accordance with paragraph 35(a) of IFRS 15.

IE94 The entity also determines that the customer benefits from the entity’s service of making the health clubs available evenly throughout the year. (That is, the
customer benefits from having the health clubs available, regardless of whether
the customer uses it or not.) Consequently, the entity concludes that the best
measure of progress towards complete satisfaction of the performance
obligation over time is a time-based measure and it recognises revenue on a
straight-line basis throughout the year at CU100 per month.

Example 19—Uninstalled materials
IE95 In November 20X2, an entity contracts with a customer to refurbish a 3-storey
building and install new elevators for total consideration of CU5 million. The
promised refurbishment service, including the installation of elevators, is a
single performance obligation satisfied over time. Total expected costs are
CU4 million, including CU1.5 million for the elevators. The entity determines
that it acts as a principal in accordance with paragraphs B34–B38 of IFRS 15,
because it obtains control of the elevators before they are transferred to the
customer.

IE96 A summary of the transaction price and expected costs is as follows:

<table>
<thead>
<tr>
<th>CU</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transaction price</td>
</tr>
<tr>
<td>Expected costs:</td>
</tr>
<tr>
<td>Elevators</td>
</tr>
<tr>
<td>Other costs</td>
</tr>
<tr>
<td>Total expected costs</td>
</tr>
</tbody>
</table>

IE97 The entity uses an input method based on costs incurred to measure its progress
towards complete satisfaction of the performance obligation. The entity assesses
whether the costs incurred to procure the elevators are proportionate to the
entity’s progress in satisfying the performance obligation, in accordance with
paragraph B19 of IFRS 15. The customer obtains control of the elevators when
they are delivered to the site in December 20X2, although the elevators will not
be installed until June 20X3. The costs to procure the elevators (CU1.5 million)
are significant relative to the total expected costs to completely satisfy the
performance obligation (CU4 million). The entity is not involved in designing or
manufacturing the elevators.

IE98 The entity concludes that including the costs to procure the elevators in the
measure of progress would overstate the extent of the entity’s performance.
Consequently, in accordance with paragraph B19 of IFRS 15, the entity adjusts
its measure of progress to exclude the costs to procure the elevators from the
measure of costs incurred and from the transaction price. The entity recognises
revenue for the transfer of the elevators in an amount equal to the costs to
procure the elevators (ie at a zero margin).

IE99 As of 31 December 20X2 the entity observes that:
(a) other costs incurred (excluding elevators) are CU500,000; and
(b) performance is 20 per cent complete (ie CU500,000 ÷ CU2,500,000).

IE100 Consequently, at 31 December 20X2, the entity recognises the following:
### Variable consideration

**Example 20—Penalty gives rise to variable consideration**

IE102 An entity enters into a contract with a customer to build an asset for CU1 million. In addition, the terms of the contract include a penalty of CU100,000 if the construction is not completed within three months of a date specified in the contract.

IE103 The entity concludes that the consideration promised in the contract includes a fixed amount of CU900,000 and a variable amount of CU100,000 (arising from the penalty).

IE104 The entity estimates the variable consideration in accordance with paragraphs 50–54 of IFRS 15 and considers the requirements in paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration.

**Example 21—Estimating variable consideration**

IE105 An entity enters into a contract with a customer to build a customised asset. The promise to transfer the asset is a performance obligation that is satisfied over time. The promised consideration is CU2.5 million, but that amount will be reduced or increased depending on the timing of completion of the asset. Specifically, for each day after 31 March 20X7 that the asset is incomplete, the promised consideration is reduced by CU10,000. For each day before 31 March 20X7 that the asset is complete, the promised consideration increases by CU10,000.

IE106 In addition, upon completion of the asset, a third party will inspect the asset and assign a rating based on metrics that are defined in the contract. If the asset receives a specified rating, the entity will be entitled to an incentive bonus of CU150,000.

IE107 In determining the transaction price, the entity prepares a separate estimate for each element of variable consideration to which the entity will be entitled using the estimation methods described in paragraph 53 of IFRS 15:

(a) the entity decides to use the expected value method to estimate the variable consideration associated with the daily penalty or incentive (ie CU2.5 million, plus or minus CU10,000 per day). This is because it is
the method that the entity expects to better predict the amount of consideration to which it will be entitled.

(b) the entity decides to use the most likely amount to estimate the variable consideration associated with the incentive bonus. This is because there are only two possible outcomes (CU150,000 or CU0) and it is the method that the entity expects to better predict the amount of consideration to which it will be entitled.

IE108 The entity considers the requirements in paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration to determine whether the entity should include some or all of its estimate of variable consideration in the transaction price.

Constraining estimates of variable consideration

IE109 Examples 22–25 illustrate the requirements in paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration. In addition, the following requirements are illustrated in these examples:

(a) paragraph 55 of IFRS 15 on refund liabilities (Example 22);

(b) paragraphs B20–B27 of IFRS 15 on sales with a right of return (Example 22); and

(c) paragraphs 84–86 of IFRS 15 on allocating variable consideration to performance obligations (Example 25).

Example 22—Right of return

IE110 An entity enters into 100 contracts with customers. Each contract includes the sale of one product for CU100 (100 total products × CU100 = CU10,000 total consideration). Cash is received when control of a product transfers. The entity’s customary business practice is to allow a customer to return any unused product within 30 days and receive a full refund. The entity’s cost of each product is CU60.

IE111 The entity applies the requirements in IFRS 15 to the portfolio of 100 contracts because it reasonably expects that, in accordance with paragraph 4, the effects on the financial statements from applying these requirements to the portfolio would not differ materially from applying the requirements to the individual contracts within the portfolio.

IE112 Because the contract allows a customer to return the products, the consideration received from the customer is variable. To estimate the variable consideration to which the entity will be entitled, the entity decides to use the expected value method (see paragraph 53(a) of IFRS 15) because it is the method that the entity expects to better predict the amount of consideration to which it will be entitled. Using the expected value method, the entity estimates that 97 products will not be returned.

IE113 The entity also considers the requirements in paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration to determine whether the estimated amount of variable consideration of CU9,700 (CU100 × 97 products
not expected to be returned) can be included in the transaction price. The entity considers the factors in paragraph 57 of IFRS 15 and determines that although the returns are outside the entity’s influence, it has significant experience in estimating returns for this product and customer class. In addition, the uncertainty will be resolved within a short time frame (i.e., the 30-day return period). Thus, the entity concludes that it is highly probable that a significant reversal in the cumulative amount of revenue recognised (i.e., CU9,700) will not occur as the uncertainty is resolved (i.e., over the return period).

IE114 The entity estimates that the costs of recovering the products will be immaterial and expects that the returned products can be resold at a profit.

IE115 Upon transfer of control of the 100 products, the entity does not recognise revenue for the three products that it expects to be returned. Consequently, in accordance with paragraphs 55 and B21 of IFRS 15, the entity recognises the following:

(a) revenue of CU9,700 (CU100 × 97 products not expected to be returned);
(b) a refund liability of CU300 (CU100 refund × 3 products expected to be returned); and
(c) an asset of CU180 (CU60 × 3 products for its right to recover products from customers on settling the refund liability).

Example 23—Price concessions

IE116 An entity enters into a contract with a customer, a distributor, on 1 December 20X7. The entity transfers 1,000 products at contract inception for a price stated in the contract of CU100 per product (total consideration is CU100,000). Payment from the customer is due when the customer sells the products to the end customers. The entity’s customer generally sells the products within 90 days of obtaining them. Control of the products transfers to the customer on 1 December 20X7.

IE117 On the basis of its past practices and to maintain its relationship with the customer, the entity anticipates granting a price concession to its customer because this will enable the customer to discount the product and thereby move the product through the distribution chain. Consequently, the consideration in the contract is variable.

Case A—Estimate of variable consideration is not constrained

IE118 The entity has significant experience selling this and similar products. The observable data indicate that historically the entity grants a price concession of approximately 20 per cent of the sales price for these products. Current market information suggests that a 20 per cent reduction in price will be sufficient to move the products through the distribution chain. The entity has not granted a price concession significantly greater than 20 per cent in many years.

IE119 To estimate the variable consideration to which the entity will be entitled, the entity decides to use the expected value method (see paragraph 53(a) of IFRS 15) because it is the method that the entity expects to better predict the amount of consideration to which it will be entitled. Using the expected value method, the entity estimates the transaction price to be CU80,000 (CU80 × 1,000 products).
The entity also considers the requirements in paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration to determine whether the estimated amount of variable consideration of CU80,000 can be included in the transaction price. The entity considers the factors in paragraph 57 of IFRS 15 and determines that it has significant previous experience with this product and current market information that supports its estimate. In addition, despite some uncertainty resulting from factors outside its influence, based on its current market estimates, the entity expects the price to be resolved within a short time frame. Thus, the entity concludes that it is highly probable that a significant reversal in the cumulative amount of revenue recognised (ie CU80,000) will not occur when the uncertainty is resolved (ie when the total amount of price concessions is determined). Consequently, the entity recognises CU80,000 as revenue when the products are transferred on 1 December 20X7.

Case B—Estimate of variable consideration is constrained

The entity has experience selling similar products. However, the entity’s products have a high risk of obsolescence and the entity is experiencing high volatility in the pricing of its products. The observable data indicate that historically the entity grants a broad range of price concessions ranging from 20–60 per cent of the sales price for similar products. Current market information also suggests that a 15–50 per cent reduction in price may be necessary to move the products through the distribution chain.

To estimate the variable consideration to which the entity will be entitled, the entity decides to use the expected value method (see paragraph 53(a) of IFRS 15) because it is the method that the entity expects to better predict the amount of consideration to which it will be entitled. Using the expected value method, the entity estimates that a discount of 40 per cent will be provided and, therefore, the estimate of the variable consideration is CU60,000 (CU60 × 1,000 products).

The entity also considers the requirements in paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration to determine whether some or all of the estimated amount of variable consideration of CU60,000 can be included in the transaction price. The entity considers the factors in paragraph 57 of IFRS 15 and observes that the amount of consideration is highly susceptible to factors outside the entity’s influence (ie risk of obsolescence) and it is likely that the entity may be required to provide a broad range of price concessions to move the products through the distribution chain. Consequently, the entity cannot include its estimate of CU60,000 (ie a discount of 40 per cent) in the transaction price because it cannot conclude that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur. Although the entity’s historical price concessions have ranged from 20–60 per cent, market information currently suggests that a price concession of 15–50 per cent will be necessary. The entity’s actual results have been consistent with then-current market information in previous, similar transactions. Consequently, the entity concludes that it is highly probable that a significant reversal in the cumulative amount of revenue recognised will not occur if the entity includes CU50,000 in the transaction price (CU100 sales price and a 50 per cent price concession) and therefore, recognises revenue at that amount. Therefore, the entity recognises revenue of CU50,000 when the
products are transferred and reassesses the estimates of the transaction price at
each reporting date until the uncertainty is resolved in accordance with
paragraph 59 of IFRS 15.

Example 24—Volume discount incentive

IE124 An entity enters into a contract with a customer on 1 January 20X8 to sell
Product A for CU100 per unit. If the customer purchases more than 1,000 units
of Product A in a calendar year, the contract specifies that the price per unit is
retrospectively reduced to CU90 per unit. Consequently, the consideration in
the contract is variable.

IE125 For the first quarter ended 31 March 20X8, the entity sells 75 units of Product A
to the customer. The entity estimates that the customer’s purchases will not
exceed the 1,000-unit threshold required for the volume discount in the
calendar year.

IE126 The entity considers the requirements in paragraphs 56–58 of IFRS 15 on
constraining estimates of variable consideration, including the factors in
paragraph 57 of IFRS 15. The entity determines that it has significant experience
with this product and with the purchasing pattern of the entity. Thus, the
entity concludes that it is highly probable that a significant reversal in the
cumulative amount of revenue recognised (ie CU100 per unit) will not occur
when the uncertainty is resolved (ie when the total amount of purchases is
known). Consequently, the entity recognises revenue of CU7,500 (75 units ×
CU100 per unit) for the quarter ended 31 March 20X8.

IE127 In May 20X8, the entity’s customer acquires another company and in the second
quarter ended 30 June 20X8 the entity sells an additional 500 units of Product A
to the customer. In the light of the new fact, the entity estimates that the
customer’s purchases will exceed the 1,000-unit threshold for the calendar year
and therefore it will be required to retrospectively reduce the price per unit
to CU90.

IE128 Consequently, the entity recognises revenue of CU44,250 for the quarter ended
30 June 20X8. That amount is calculated from CU45,000 for the sale of 500 units
(500 units × CU90 per unit) less the change in transaction price of CU750
(75 units × CU10 price reduction) for the reduction of revenue relating to units
sold for the quarter ended 31 March 20X8 (see paragraphs 87 and 88 of IFRS 15).

Example 25—Management fees subject to the constraint

IE129 On 1 January 20X8, an entity enters into a contract with a client to provide asset
management services for five years. The entity receives a two per cent quarterly
management fee based on the client’s assets under management at the end of
each quarter. In addition, the entity receives a performance-based incentive fee
of 20 per cent of the fund’s return in excess of the return of an observable
market index over the five-year period. Consequently, both the management fee
and the performance fee in the contract are variable consideration.

IE130 The entity accounts for the services as a single performance obligation in
accordance with paragraph 22(b) of IFRS 15, because it is providing a series of
distinct services that are substantially the same and have the same pattern of
transfer (the services transfer to the customer over time and use the same method to measure progress—that is, a time-based measure of progress).

IE131 At contract inception, the entity considers the requirements in paragraphs 50–54 of IFRS 15 on estimating variable consideration and the requirements in paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration, including the factors in paragraph 57 of IFRS 15. The entity observes that the promised consideration is dependent on the market and thus is highly susceptible to factors outside the entity’s influence. In addition, the incentive fee has a large number and a broad range of possible consideration amounts. The entity also observes that although it has experience with similar contracts, that experience is of little predictive value in determining the future performance of the market. Therefore, at contract inception, the entity cannot conclude that it is highly probable that a significant reversal in the cumulative amount of revenue recognised would not occur if the entity included its estimate of the management fee or the incentive fee in the transaction price.

IE132 At each reporting date, the entity updates its estimate of the transaction price. Consequently, at the end of each quarter, the entity concludes that it can include in the transaction price the actual amount of the quarterly management fee because the uncertainty is resolved. However, the entity concludes that it cannot include its estimate of the incentive fee in the transaction price at those dates. This is because there has not been a change in its assessment from contract inception—the variability of the fee based on the market index indicates that the entity cannot conclude that it is highly probable that a significant reversal in the cumulative amount of revenue recognised would not occur if the entity included its estimate of the incentive fee in the transaction price. At 31 March 20X8, the client’s assets under management are CU100 million. Therefore, the resulting quarterly management fee and the transaction price is CU2 million.

IE133 At the end of each quarter, the entity allocates the quarterly management fee to the distinct services provided during the quarter in accordance with paragraphs 84(b) and 85 of IFRS 15. This is because the fee relates specifically to the entity’s efforts to transfer the services for that quarter, which are distinct from the services provided in other quarters, and the resulting allocation will be consistent with the allocation objective in paragraph 73 of IFRS 15. Consequently, the entity recognises CU2 million as revenue for the quarter ended 31 March 20X8.

The existence of a significant financing component in the contract

IE134 Examples 26–30 illustrate the requirements in paragraphs 60–65 of IFRS 15 on the existence of a significant financing component in the contract. In addition, the following requirements are illustrated in Example 26:

(a) paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration; and

(b) paragraphs B20–B27 of IFRS 15 on sales with a right of return.
Example 26—Significant financing component and right of return

IE135 An entity sells a product to a customer for CU121 that is payable 24 months after delivery. The customer obtains control of the product at contract inception. The contract permits the customer to return the product within 90 days. The product is new and the entity has no relevant historical evidence of product returns or other available market evidence.

IE136 The cash selling price of the product is CU100, which represents the amount that the customer would pay upon delivery for the same product sold under otherwise identical terms and conditions as at contract inception. The entity’s cost of the product is CU80.

IE137 The entity does not recognise revenue when control of the product transfers to the customer. This is because the existence of the right of return and the lack of relevant historical evidence means that the entity cannot conclude that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur in accordance with paragraphs 56–58 of IFRS 15. Consequently, revenue is recognised after three months when the right of return lapses.

IE138 The contract includes a significant financing component, in accordance with paragraphs 60–62 of IFRS 15. This is evident from the difference between the amount of promised consideration of CU121 and the cash selling price of CU100 at the date that the goods are transferred to the customer.

IE139 The contract includes an implicit interest rate of 10 per cent (ie the interest rate that over 24 months discounts the promised consideration of CU121 to the cash selling price of CU100). The entity evaluates the rate and concludes that it is commensurate with the rate that would be reflected in a separate financing transaction between the entity and its customer at contract inception. The following journal entries illustrate how the entity accounts for this contract in accordance with paragraphs B20–B27 of IFRS 15.

(a) When the product is transferred to the customer, in accordance with paragraph B21 of IFRS 15:

| Asset for right to recover product to be returned | CU80(a) |
| Inventory | CU80 |

(a) This example does not consider expected costs to recover the asset.

(b) During the three-month right of return period, no interest is recognised in accordance with paragraph 65 of IFRS 15 because no contract asset or receivable has been recognised.

(c) When the right of return lapses (the product is not returned):
Receivable CU100 (a)
Revenue    CU100
Cost of sales   CU80
Asset for product to be returned  CU80

(a) The receivable recognised would be measured in accordance with IFRS 9. This example assumes there is no material difference between the fair value of the receivable at contract inception and the fair value of the receivable when it is recognised at the time the right of return lapses. In addition, this example does not consider the impairment accounting for the receivable.

IE140 Until the entity receives the cash payment from the customer, interest revenue would be recognised in accordance with IFRS 9. In determining the effective interest rate in accordance with IFRS 9, the entity would consider the remaining contractual term.

Example 27—Withheld payments on a long-term contract

IE141 An entity enters into a contract for the construction of a building that includes scheduled milestone payments for the performance by the entity throughout the contract term of three years. The performance obligation will be satisfied over time and the milestone payments are scheduled to coincide with the entity’s expected performance. The contract provides that a specified percentage of each milestone payment is to be withheld (ie retained) by the customer throughout the arrangement and paid to the entity only when the building is complete.

IE142 The entity concludes that the contract does not include a significant financing component. The milestone payments coincide with the entity’s performance and the contract requires amounts to be retained for reasons other than the provision of finance in accordance with paragraph 62(c) of IFRS 15. The withholding of a specified percentage of each milestone payment is intended to protect the customer from the contractor failing to adequately complete its obligations under the contract.

Example 28—Determining the discount rate

IE143 An entity enters into a contract with a customer to sell equipment. Control of the equipment transfers to the customer when the contract is signed. The price stated in the contract is CU1 million plus a five per cent contractual rate of interest, payable in 60 monthly instalments of CU18,871.

Case A—Contractual discount rate reflects the rate in a separate financing transaction

IE144 In evaluating the discount rate in the contract that contains a significant financing component, the entity observes that the five per cent contractual rate of interest reflects the rate that would be used in a separate financing transaction between the entity and its customer at contract inception (ie the contractual rate of interest of five per cent reflects the credit characteristics of the customer).

IE145 The market terms of the financing mean that the cash selling price of the equipment is CU1 million. This amount is recognised as revenue and as a loan...
receiveable when control of the equipment transfers to the customer. The entity accounts for the receivable in accordance with IFRS 9.

**Case B—Contractual discount rate does not reflect the rate in a separate financing transaction**

IE146 In evaluating the discount rate in the contract that contains a significant financing component, the entity observes that the five per cent contractual rate of interest is significantly lower than the 12 per cent interest rate that would be used in a separate financing transaction between the entity and its customer at contract inception (ie the contractual rate of interest of five per cent does not reflect the credit characteristics of the customer). This suggests that the cash selling price is less than CU1 million.

IE147 In accordance with paragraph 64 of IFRS 15, the entity determines the transaction price by adjusting the promised amount of consideration to reflect the contractual payments using the 12 per cent interest rate that reflects the credit characteristics of the customer. Consequently, the entity determines that the transaction price is CU848,357 (60 monthly payments of CU18,871 discounted at 12 per cent). The entity recognises revenue and a loan receivable for that amount. The entity accounts for the loan receivable in accordance with IFRS 9.

**Example 29—Advance payment and assessment of discount rate**

IE148 An entity enters into a contract with a customer to sell an asset. Control of the asset will transfer to the customer in two years (ie the performance obligation will be satisfied at a point in time). The contract includes two alternative payment options: payment of CU5,000 in two years when the customer obtains control of the asset or payment of CU4,000 when the contract is signed. The customer elects to pay CU4,000 when the contract is signed.

IE149 The entity concludes that the contract contains a significant financing component because of the length of time between when the customer pays for the asset and when the entity transfers the asset to the customer, as well as the prevailing interest rates in the market.

IE150 The interest rate implicit in the transaction is 11.8 per cent, which is the interest rate necessary to make the two alternative payment options economically equivalent. However, the entity determines that, in accordance with paragraph 64 of IFRS 15, the rate that should be used in adjusting the promised consideration is six per cent, which is the entity’s incremental borrowing rate.

IE151 The following journal entries illustrate how the entity would account for the significant financing component:

(a) recognize a contract liability for the CU4,000 payment received at contract inception:

<table>
<thead>
<tr>
<th>Cash</th>
<th>CU4,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contract liability</td>
<td>CU4,000</td>
</tr>
</tbody>
</table>
(b) during the two years from contract inception until the transfer of the asset, the entity adjusts the promised amount of consideration (in accordance with paragraph 65 of IFRS 15) and accretes the contract liability by recognising interest on CU4,000 at six per cent for two years:

\[
\text{Interest expense} \quad \text{CU494}^{(a)} \\
\text{Contract liability} \quad \text{CU494}
\]

(a) \( \text{CU494} = \text{CU4,000 contract liability} \times (6 \text{ per cent interest per year for two years}) \).

(c) recognise revenue for the transfer of the asset:

\[
\text{Contract liability} \quad \text{CU4,494} \\
\text{Revenue} \quad \text{CU4,494}
\]

Example 30—Advance payment

IE152 An entity, a technology product manufacturer, enters into a contract with a customer to provide global telephone technology support and repair coverage for three years along with its technology product. The customer purchases this support service at the time of buying the product. Consideration for the service is an additional CU300. Customers electing to buy this service must pay for it upfront (ie a monthly payment option is not available).

IE153 To determine whether there is a significant financing component in the contract, the entity considers the nature of the service being offered and the purpose of the payment terms. The entity charges a single upfront amount, not with the primary purpose of obtaining financing from the customer but, instead, to maximise profitability, taking into consideration the risks associated with providing the service. Specifically, if customers could pay monthly, they would be less likely to renew and the population of customers that continue to use the support service in the later years may become smaller and less diverse over time (ie customers that choose to renew historically are those that make greater use of the service, thereby increasing the entity’s costs). In addition, customers tend to use services more if they pay monthly rather than making an upfront payment. Finally, the entity would incur higher administration costs such as the costs related to administering renewals and collection of monthly payments.

IE154 In assessing the requirements in paragraph 62(c) of IFRS 15, the entity determines that the payment terms were structured primarily for reasons other than the provision of finance to the entity. The entity charges a single upfront amount for the services because other payment terms (such as a monthly payment plan) would affect the nature of the risks assumed by the entity to provide the service and may make it uneconomical to provide the service. As a result of its analysis, the entity concludes that there is not a significant financing component.
Non-cash consideration

Example 31 illustrates the requirements in paragraphs 66–69 of IFRS 15 on non-cash consideration. In addition, the following requirements are illustrated in this example:

(a) paragraph 22 of IFRS 15 on identifying performance obligations; and
(b) paragraphs 56–58 of IFRS 15 on constraining estimates of variable consideration.

Example 31—Entitlement to non-cash consideration

An entity enters into a contract with a customer to provide a weekly service for one year. The contract is signed on 1 January 20X1 and work begins immediately. The entity concludes that the service is a single performance obligation in accordance with paragraph 22(b) of IFRS 15. This is because the entity is providing a series of distinct services that are substantially the same and have the same pattern of transfer (the services transfer to the customer over time and use the same method to measure progress—that is, a time-based measure of progress).

In exchange for the service, the customer promises 100 shares of its common stock per week of service (a total of 5,200 shares for the contract). The terms in the contract require that the shares must be paid upon the successful completion of each week of service.

The entity measures its progress towards complete satisfaction of the performance obligation as each week of service is complete. To determine the transaction price (and the amount of revenue to be recognised), the entity measures the fair value of 100 shares that are received upon completion of each weekly service. The entity does not reflect any subsequent changes in the fair value of the shares received (or receivable) in revenue.

Consideration payable to a customer

Example 32 illustrates the requirements in paragraphs 70–72 of IFRS 15 on consideration payable to a customer.

Example 32—Consideration payable to a customer

An entity that manufactures consumer goods enters into a one-year contract to sell goods to a customer that is a large global chain of retail stores. The customer commits to buy at least CU15 million of products during the year. The contract also requires the entity to make a non-refundable payment of CU1.5 million to the customer at the inception of the contract. The CU1.5 million payment will compensate the customer for the changes it needs to make to its shelving to accommodate the entity’s products.

The entity considers the requirements in paragraphs 70–72 of IFRS 15 and concludes that the payment to the customer is not in exchange for a distinct good or service that transfers to the entity. This is because the entity does not obtain control of any rights to the customer’s shelves. Consequently, the entity...
determines that, in accordance with paragraph 70 of IFRS 15, the CU1.5 million payment is a reduction of the transaction price.

IE162 The entity applies the requirements in paragraph 72 of IFRS 15 and concludes that the consideration payable is accounted for as a reduction in the transaction price when the entity recognises revenue for the transfer of the goods. Consequently, as the entity transfers goods to the customer, the entity reduces the transaction price for each good by 10 per cent (CU1.5 million ÷ CU15 million). Therefore, in the first month in which the entity transfers goods to the customer, the entity recognises revenue of CU1.8 million (CU2.0 million invoiced amount less CU0.2 million of consideration payable to the customer).

Allocating the transaction price to performance obligations

IE163 Examples 33–35 illustrate the requirements in paragraphs 73–86 of IFRS 15 on allocating the transaction price to performance obligations. In addition, the following requirements are illustrated in Example 35:

(a) paragraph 53 of IFRS 15 on variable consideration; and

(b) paragraph B63 of IFRS 15 on consideration in the form of sales-based or usage-based royalties on licences of intellectual property.

Example 33—Allocation methodology

IE164 An entity enters into a contract with a customer to sell Products A, B and C in exchange for CU100. The entity will satisfy the performance obligations for each of the products at different points in time. The entity regularly sells Product A separately and therefore the stand-alone selling price is directly observable. The stand-alone selling prices of Products B and C are not directly observable.

IE165 Because the stand-alone selling prices for Products B and C are not directly observable, the entity must estimate them. To estimate the stand-alone selling prices, the entity uses the adjusted market assessment approach for Product B and the expected cost plus a margin approach for Product C. In making those estimates, the entity maximises the use of observable inputs (in accordance with paragraph 78 of IFRS 15). The entity estimates the stand-alone selling prices as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Stand-alone selling price</th>
<th>Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product A</td>
<td>50</td>
<td>Directly observable (see paragraph 77 of IFRS 15)</td>
</tr>
<tr>
<td>Product B</td>
<td>25</td>
<td>Adjusted market assessment approach (see paragraph 79(a) of IFRS 15)</td>
</tr>
<tr>
<td>Product C</td>
<td>75</td>
<td>Expected cost plus a margin approach (see paragraph 79(b) of IFRS 15)</td>
</tr>
<tr>
<td>Total</td>
<td>150</td>
<td></td>
</tr>
</tbody>
</table>
The customer receives a discount for purchasing the bundle of goods because the sum of the stand-alone selling prices (CU150) exceeds the promised consideration (CU100). The entity considers whether it has observable evidence about the performance obligation to which the entire discount belongs (in accordance with paragraph 82 of IFRS 15) and concludes that it does not. Consequently, in accordance with paragraphs 76 and 81 of IFRS 15, the discount is allocated proportionately across Products A, B and C. The discount, and therefore the transaction price, is allocated as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Allocated transaction price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product A</td>
<td>33 (CU50 ÷ CU150 × CU100)</td>
</tr>
<tr>
<td>Product B</td>
<td>17 (CU25 ÷ CU150 × CU100)</td>
</tr>
<tr>
<td>Product C</td>
<td>50 (CU75 ÷ CU150 × CU100)</td>
</tr>
<tr>
<td>Total</td>
<td>100</td>
</tr>
</tbody>
</table>

**Example 34—Allocating a discount**

An entity regularly sells Products A, B and C individually, thereby establishing the following stand-alone selling prices:

<table>
<thead>
<tr>
<th>Product</th>
<th>Stand-alone selling price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product A</td>
<td>40</td>
</tr>
<tr>
<td>Product B</td>
<td>55</td>
</tr>
<tr>
<td>Product C</td>
<td>45</td>
</tr>
<tr>
<td>Total</td>
<td>140</td>
</tr>
</tbody>
</table>

In addition, the entity regularly sells Products B and C together for CU60.

**Case A—Allocating a discount to one or more performance obligations**

The entity enters into a contract with a customer to sell Products A, B and C in exchange for CU100. The entity will satisfy the performance obligations for each of the products at different points in time.

The contract includes a discount of CU40 on the overall transaction, which would be allocated proportionately to all three performance obligations when allocating the transaction price using the relative stand-alone selling price method (in accordance with paragraph 81 of IFRS 15). However, because the entity regularly sells Products B and C together for CU60 and Product A for CU40, it has evidence that the entire discount should be allocated to the promises to transfer Products B and C in accordance with paragraph 82 of IFRS 15.

If the entity transfers control of Products B and C at the same point in time, then the entity could, as a practical matter, account for the transfer of those products as a single performance obligation. That is, the entity could allocate CU60 of the
transaction price to the single performance obligation and recognise revenue of CU60 when Products B and C simultaneously transfer to the customer.

IE172 If the contract requires the entity to transfer control of Products B and C at different points in time, then the allocated amount of CU60 is individually allocated to the promises to transfer Product B (stand-alone selling price of CU55) and Product C (stand-alone selling price of CU45) as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Allocated transaction price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product B</td>
<td>33 (CU55 + CU100 total stand-alone selling price × CU60)</td>
</tr>
<tr>
<td>Product C</td>
<td>27 (CU45 + CU100 total stand-alone selling price × CU60)</td>
</tr>
<tr>
<td>Total</td>
<td>60</td>
</tr>
</tbody>
</table>

Case B—Residual approach is appropriate

IE173 The entity enters into a contract with a customer to sell Products A, B and C as described in Case A. The contract also includes a promise to transfer Product D. Total consideration in the contract is CU130. The stand-alone selling price for Product D is highly variable (see paragraph 79(c) of IFRS 15) because the entity sells Product D to different customers for a broad range of amounts (CU15–CU45). Consequently, the entity decides to estimate the stand-alone selling price of Product D using the residual approach.

IE174 Before estimating the stand-alone selling price of Product D using the residual approach, the entity determines whether any discount should be allocated to the other performance obligations in the contract in accordance with paragraphs 82 and 83 of IFRS 15.

IE175 As in Case A, because the entity regularly sells Products B and C together for CU60 and Product A for CU40, it has observable evidence that CU100 should be allocated to those three products and a CU40 discount should be allocated to the promises to transfer Products B and C in accordance with paragraph 82 of IFRS 15. Using the residual approach, the entity estimates the stand-alone selling price of Product D to be CU30 as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Stand-alone selling price</th>
<th>Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product A</td>
<td>40</td>
<td>Directly observable (see paragraph 77 of IFRS 15)</td>
</tr>
<tr>
<td>Products B and C</td>
<td>60</td>
<td>Directly observable with discount (see paragraph 82 of IFRS 15)</td>
</tr>
<tr>
<td>Product D</td>
<td>30</td>
<td>Residual approach (see paragraph 79(c) of IFRS 15)</td>
</tr>
<tr>
<td>Total</td>
<td>130</td>
<td></td>
</tr>
</tbody>
</table>
IE176 The entity observes that the resulting CU30 allocated to Product D is within the range of its observable selling prices (CU15–CU45). Therefore, the resulting allocation (see above table) is consistent with the allocation objective in paragraph 73 of IFRS 15 and the requirements in paragraph 78 of IFRS 15.

Case C—Residual approach is inappropriate

IE177 The same facts as in Case B apply to Case C except the transaction price is CU105 instead of CU130. Consequently, the application of the residual approach would result in a stand-alone selling price of CU5 for Product D (CU105 transaction price less CU100 allocated to Products A, B and C). The entity concludes that CU5 would not faithfully depict the amount of consideration to which the entity expects to be entitled in exchange for satisfying its performance obligation to transfer Product D, because CU5 does not approximate the stand-alone selling price of Product D, which ranges from CU15–CU45. Consequently, the entity reviews its observable data, including sales and margin reports, to estimate the stand-alone selling price of Product D using another suitable method. The entity allocates the transaction price of CU130 to Products A, B, C and D using the relative stand-alone selling prices of those products in accordance with paragraphs 73–80 of IFRS 15.

Example 35—Allocation of variable consideration

IE178 An entity enters into a contract with a customer for two intellectual property licences (Licences X and Y), which the entity determines to represent two performance obligations each satisfied at a point in time. The stand-alone selling prices of Licences X and Y are CU800 and CU1,000, respectively.

Case A—Variable consideration allocated entirely to one performance obligation

IE179 The price stated in the contract for Licence X is a fixed amount of CU800 and for Licence Y the consideration is three per cent of the customer’s future sales of products that use Licence Y. For purposes of allocation, the entity estimates its sales-based royalties (ie the variable consideration) to be CU1,000, in accordance with paragraph 53 of IFRS 15.

IE180 To allocate the transaction price, the entity considers the criteria in paragraph 85 of IFRS 15 and concludes that the variable consideration (ie the sales-based royalties) should be allocated entirely to Licence Y. The entity concludes that the criteria in paragraph 85 of IFRS 15 are met for the following reasons:

(a) the variable payment relates specifically to an outcome from the performance obligation to transfer Licence Y (ie the customer’s subsequent sales of products that use Licence Y),

(b) allocating the expected royalty amounts of CU1,000 entirely to Licence Y is consistent with the allocation objective in paragraph 73 of IFRS 15. This is because the entity’s estimate of the amount of sales-based royalties (CU1,000) approximates the stand-alone selling price of Licence Y and the fixed amount of CU800 approximates the stand-alone selling price of Licence X. The entity allocates CU800 to Licence X in
accordance with paragraph 86 of IFRS 15. This is because, based on an assessment of the facts and circumstances relating to both licences, allocating to Licence Y some of the fixed consideration in addition to all of the variable consideration would not meet the allocation objective in paragraph 73 of IFRS 15.

IE181 The entity transfers Licence Y at inception of the contract and transfers Licence X one month later. Upon the transfer of Licence Y, the entity does not recognise revenue because the consideration allocated to Licence Y is in the form of a sales-based royalty. Therefore, in accordance with paragraph B63 of IFRS 15, the entity recognises revenue for the sales-based royalty when those subsequent sales occur.

IE182 When Licence X is transferred, the entity recognises as revenue the CU800 allocated to Licence X.

Case B—Variable consideration allocated on the basis of stand-alone selling prices

IE183 The price stated in the contract for Licence X is a fixed amount of CU300 and for Licence Y the consideration is five per cent of the customer’s future sales of products that use Licence Y. The entity’s estimate of the sales-based royalties (ie the variable consideration) is CU1,500 in accordance with paragraph 53 of IFRS 15.

IE184 To allocate the transaction price, the entity applies the criteria in paragraph 85 of IFRS 15 to determine whether to allocate the variable consideration (ie the sales-based royalties) entirely to Licence Y. In applying the criteria, the entity concludes that even though the variable payments relate specifically to an outcome from the performance obligation to transfer Licence Y (ie the customer’s subsequent sales of products that use Licence Y), allocating the variable consideration entirely to Licence Y would be inconsistent with the principle for allocating the transaction price. Allocating CU300 to Licence X and CU1,500 to Licence Y does not reflect a reasonable allocation of the transaction price on the basis of the stand-alone selling prices of Licences X and Y of CU800 and CU1,000, respectively. Consequently, the entity applies the general allocation requirements in paragraphs 76–80 of IFRS 15.

IE185 The entity allocates the transaction price of CU300 to Licences X and Y on the basis of relative stand-alone selling prices of CU800 and CU1,000, respectively. The entity also allocates the consideration related to the sales-based royalty on a relative stand-alone selling price basis. However, in accordance with paragraph B63 of IFRS 15, when an entity licenses intellectual property in which the consideration is in the form of a sales-based royalty, the entity cannot recognise revenue until the later of the following events: the subsequent sales occur or the performance obligation is satisfied (or partially satisfied).

IE186 Licence Y is transferred to the customer at the inception of the contract and Licence X is transferred three months later. When Licence Y is transferred, the entity recognises as revenue the CU167 (CU1,000 ÷ CU1,800 × CU300) allocated to Licence Y. When Licence X is transferred, the entity recognises as revenue the CU133 (CU800 ÷ CU1,800 × CU300) allocated to Licence X.
In the first month, the royalty due from the customer’s first month of sales is CU200. Consequently, in accordance with paragraph B63 of IFRS 15, the entity recognises as revenue the CU111 (CU1,000 ÷ CU1,800 × CU200) allocated to Licence Y (which has been transferred to the customer and is therefore a satisfied performance obligation). The entity recognises a contract liability for the CU89 (CU800 ÷ CU1,800 × CU200) allocated to Licence X. This is because although the subsequent sale by the entity’s customer has occurred, the performance obligation to which the royalty has been allocated has not been satisfied.

Contract costs

Examples 36–37 illustrate the requirements in paragraphs 91–94 of IFRS 15 on incremental costs of obtaining a contract, paragraphs 95–98 of IFRS 15 on costs to fulfil a contract and paragraphs 99–104 of IFRS 15 on amortisation and impairment of contract costs.

Example 36—Incremental costs of obtaining a contract

An entity, a provider of consulting services, wins a competitive bid to provide consulting services to a new customer. The entity incurred the following costs to obtain the contract:

<table>
<thead>
<tr>
<th>Service</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>External legal fees for due diligence</td>
<td>15,000</td>
</tr>
<tr>
<td>Travel costs to deliver proposal</td>
<td>25,000</td>
</tr>
<tr>
<td>Commissions to sales employees</td>
<td>10,000</td>
</tr>
</tbody>
</table>

Total costs incurred = CU50,000

In accordance with paragraph 91 of IFRS 15, the entity recognises an asset for the CU10,000 incremental costs of obtaining the contract arising from the commissions to sales employees because the entity expects to recover those costs through future fees for the consulting services. The entity also pays discretionary annual bonuses to sales supervisors based on annual sales targets, overall profitability of the entity and individual performance evaluations. In accordance with paragraph 91 of IFRS 15, the entity does not recognise an asset for the bonuses paid to sales supervisors because the bonuses are not incremental to obtaining a contract. The amounts are discretionary and are based on other factors, including the profitability of the entity and the individuals’ performance. The bonuses are not directly attributable to identifiable contracts.

The entity observes that the external legal fees and travel costs would have been incurred regardless of whether the contract was obtained. Therefore, in accordance with paragraph 93 of IFRS 15, those costs are recognised as expenses when incurred, unless they are within the scope of another Standard, in which case, the relevant provisions of that Standard apply.

Example 37—Costs that give rise to an asset

An entity enters into a service contract to manage a customer’s information technology data centre for five years. The contract is renewable for subsequent
one-year periods. The average customer term is seven years. The entity pays an employee a CU10,000 sales commission upon the customer signing the contract. Before providing the services, the entity designs and builds a technology platform for the entity’s internal use that interfaces with the customer’s systems. That platform is not transferred to the customer, but will be used to deliver services to the customer.

**Incremental costs of obtaining a contract**

IE193 In accordance with paragraph 91 of IFRS 15, the entity recognises an asset for the CU10,000 incremental costs of obtaining the contract for the sales commission because the entity expects to recover those costs through future fees for the services to be provided. The entity amortises the asset over seven years in accordance with paragraph 99 of IFRS 15, because the asset relates to the services transferred to the customer during the contract term of five years and the entity anticipates that the contract will be renewed for two subsequent one-year periods.

**Costs to fulfil a contract**

IE194 The initial costs incurred to set up the technology platform are as follows:

<table>
<thead>
<tr>
<th>Cost</th>
<th>CU</th>
</tr>
</thead>
<tbody>
<tr>
<td>Design services</td>
<td>40,000</td>
</tr>
<tr>
<td>Hardware</td>
<td>120,000</td>
</tr>
<tr>
<td>Software</td>
<td>90,000</td>
</tr>
<tr>
<td>Migration and testing of data centre</td>
<td>100,000</td>
</tr>
<tr>
<td><strong>Total costs</strong></td>
<td><strong>350,000</strong></td>
</tr>
</tbody>
</table>

IE195 The initial setup costs relate primarily to activities to fulfil the contract but do not transfer goods or services to the customer. The entity accounts for the initial setup costs as follows:

(a) hardware costs—accounted for in accordance with IAS 16 *Property, Plant and Equipment*.

(b) software costs—accounted for in accordance with IAS 38 *Intangible Assets*.

(c) costs of the design, migration and testing of the data centre—assessed in accordance with paragraph 95 of IFRS 15 to determine whether an asset can be recognised for the costs to fulfil the contract. Any resulting asset would be amortised on a systematic basis over the seven-year period (ie the five-year contract term and two anticipated one-year renewal periods) that the entity expects to provide services related to the data centre.

IE196 In addition to the initial costs to set up the technology platform, the entity also assigns two employees who are primarily responsible for providing the service to the customer. Although the costs for these two employees are incurred as part of providing the service to the customer, the entity concludes that the costs do not generate or enhance resources of the entity (see paragraph 95(b) of IFRS 15). Therefore, the costs do not meet the criteria in paragraph 95 of IFRS 15 and
cannot be recognised as an asset using IFRS 15. In accordance with paragraph 98, the entity recognises the payroll expense for these two employees when incurred.

Presentation

Examples 38–40 illustrate the requirements in paragraphs 105–109 of IFRS 15 on the presentation of contract balances.

Example 38—Contract liability and receivable

Case A—Cancellable contract

On 1 January 20X9, an entity enters into a cancellable contract to transfer a product to a customer on 31 March 20X9. The contract requires the customer to pay consideration of CU1,000 in advance on 31 January 20X9. The customer pays the consideration on 1 March 20X9. The entity transfers the product on 31 March 20X9. The following journal entries illustrate how the entity accounts for the contract:

(a) The entity receives cash of CU1,000 on 1 March 20X9 (cash is received in advance of performance):

<table>
<thead>
<tr>
<th>Description</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash</td>
<td>CU1,000</td>
<td></td>
</tr>
<tr>
<td>Contract liability</td>
<td></td>
<td>CU1,000</td>
</tr>
</tbody>
</table>

(b) The entity satisfies the performance obligation on 31 March 20X9:

<table>
<thead>
<tr>
<th>Description</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contract liability</td>
<td>CU1,000</td>
<td></td>
</tr>
<tr>
<td>Revenue</td>
<td></td>
<td>CU1,000</td>
</tr>
</tbody>
</table>

Case B—Non-cancellable contract

The same facts as in Case A apply to Case B except that the contract is non-cancellable. The following journal entries illustrate how the entity accounts for the contract:

(a) The amount of consideration is due on 31 January 20X9 (which is when the entity recognises a receivable because it has an unconditional right to consideration):

<table>
<thead>
<tr>
<th>Description</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Receivable</td>
<td>CU1,000</td>
<td></td>
</tr>
<tr>
<td>Contract liability</td>
<td></td>
<td>CU1,000</td>
</tr>
</tbody>
</table>

(b) The entity receives the cash on 1 March 20X9:

<table>
<thead>
<tr>
<th>Description</th>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash</td>
<td>CU1,000</td>
<td></td>
</tr>
<tr>
<td>Receivable</td>
<td></td>
<td>CU1,000</td>
</tr>
</tbody>
</table>

(c) The entity satisfies the performance obligation on 31 March 20X9:
If the entity issued the invoice before 31 January 20X9 (the due date of the consideration), the entity would not present the receivable and the contract liability on a gross basis in the statement of financial position because the entity does not yet have a right to consideration that is unconditional.

**Example 39—Contract asset recognised for the entity’s performance**

On 1 January 20X8, an entity enters into a contract to transfer Products A and B to a customer in exchange for CU1,000. The contract requires Product A to be delivered first and states that payment for the delivery of Product A is conditional on the delivery of Product B. In other words, the consideration of CU1,000 is due only after the entity has transferred both Products A and B to the customer. Consequently, the entity does not have a right to consideration that is unconditional (a receivable) until both Products A and B are transferred to the customer.

The entity identifies the promises to transfer Products A and B as performance obligations and allocates CU400 to the performance obligation to transfer Product A and CU600 to the performance obligation to transfer Product B on the basis of their relative stand-alone selling prices. The entity recognises revenue for each respective performance obligation when control of the product transfers to the customer.

The entity satisfies the performance obligation to transfer Product A:

- **Contract asset**: CU400
- **Revenue**: CU400

The entity satisfies the performance obligation to transfer Product B and to recognise the unconditional right to consideration:

- **Receivable**: CU1,000
- **Contract asset**: CU400
- **Revenue**: CU600

**Example 40—Receivable recognised for the entity’s performance**

An entity enters into a contract with a customer on 1 January 20X9 to transfer products to the customer for CU150 per product. If the customer purchases more than 1 million products in a calendar year, the contract indicates that the price per unit is retrospectively reduced to CU125 per product.

Consideration is due when control of the products transfer to the customer. Therefore, the entity has an unconditional right to consideration (ie a receivable) for CU150 per product until the retrospective price reduction applies (ie after 1 million products are shipped).
In determining the transaction price, the entity concludes at contract inception that the customer will meet the 1 million products threshold and therefore estimates that the transaction price is CU125 per product. Consequently, upon the first shipment to the customer of 100 products the entity recognises the following:

Receivable
CU15,000(a)

Revenue
CU12,500(b)

Refund liability (contract liability)
CU2,500

(a) CU150 per product × 100 products.
(b) CU125 transaction price per product × 100 products.

The refund liability (see paragraph 55 of IFRS 15) represents a refund of CU25 per product, which is expected to be provided to the customer for the volume-based rebate (ie the difference between the CU150 price stated in the contract that the entity has an unconditional right to receive and the CU125 estimated transaction price).

Disclosure

Example 41 illustrates the requirements in paragraphs 114–115 and B87–B89 of IFRS 15 on the disaggregation of revenue disclosure. Examples 42–43 illustrate the requirements in paragraphs 120–122 of IFRS 15 for the disclosure of the transaction price allocated to the remaining performance obligations. In addition, the following requirements are illustrated in Example 42:

(a) paragraph 57 of IFRS 15 on constraining estimates of variable consideration; and
(b) paragraph B16 of IFRS 15 on methods for measuring progress towards complete satisfaction of a performance obligation.

Example 41—Disaggregation of revenue—quantitative disclosure

An entity reports the following segments: consumer products, transportation and energy, in accordance with IFRS 8 Operating Segments. When the entity prepares its investor presentations, it disaggregates revenue into primary geographical markets, major product lines and timing of revenue recognition (ie goods transferred at a point in time or services transferred over time).

The entity determines that the categories used in the investor presentations can be used to meet the objective of the disaggregation disclosure requirement in paragraph 114 of IFRS 15, which is to disaggregate revenue from contracts with customers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. The following table illustrates the disaggregation disclosure by primary geographical market, major product line and timing of revenue recognition, including a reconciliation of how the disaggregated revenue ties in with the consumer products, transportation and energy segments, in accordance with paragraph 115 of IFRS 15.
<table>
<thead>
<tr>
<th>Segments</th>
<th>Consumer products</th>
<th>Transport</th>
<th>Energy</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CU</td>
<td>CU</td>
<td>CU</td>
<td>CU</td>

Example 42—Disclosure of the transaction price allocated to the remaining performance obligations

On 30 June 20X7, an entity enters into three contracts (Contracts A, B and C) with separate customers to provide services. Each contract has a two-year non-cancellable term. The entity considers the requirements in paragraphs 120–122 of IFRS 15 in determining the information in each contract to be included in the disclosure of the transaction price allocated to the remaining performance obligations at 31 December 20X7.

Contract A

Cleaning services are to be provided over the next two years typically at least once per month. For services provided, the customer pays an hourly rate of CU25.

Because the entity bills a fixed amount for each hour of service provided, the entity has a right to invoice the customer in the amount that corresponds directly with the value of the entity’s performance completed to date in
accordance with paragraph B16 of IFRS 15. Consequently, no disclosure is necessary if the entity elects to apply the practical expedient in paragraph 121(b) of IFRS 15.

**Contract B**

IE215 Cleaning services and lawn maintenance services are to be provided as and when needed with a maximum of four visits per month over the next two years. The customer pays a fixed price of CU400 per month for both services. The entity measures its progress towards complete satisfaction of the performance obligation using a time-based measure.

IE216 The entity discloses the amount of the transaction price that has not yet been recognised as revenue in a table with quantitative time bands that illustrates when the entity expects to recognise the amount as revenue. The information for Contract B included in the overall disclosure is as follows:

<table>
<thead>
<tr>
<th></th>
<th>20X8</th>
<th>20X9</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Revenue expected to be recognised on this contract as of 31 December 20X7</td>
<td>CU4,800</td>
<td>CU2,400</td>
<td>CU7,200</td>
</tr>
</tbody>
</table>

(a) CU4,800 = CU400 × 12 months.
(b) CU2,400 = CU400 × 6 months.

**Contract C**

IE217 Cleaning services are to be provided as and when needed over the next two years. The customer pays fixed consideration of CU100 per month plus a one-time variable consideration payment ranging from CU0–CU1,000 corresponding to a one-time regulatory review and certification of the customer’s facility (i.e., a performance bonus). The entity estimates that it will be entitled to CU750 of the variable consideration. On the basis of the entity’s assessment of the factors in paragraph 57 of IFRS 15, the entity includes its estimate of CU750 of variable consideration in the transaction price because it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur. The entity measures its progress towards complete satisfaction of the performance obligation using a time-based measure.

IE218 The entity discloses the amount of the transaction price that has not yet been recognised as revenue in a table with quantitative time bands that illustrates when the entity expects to recognise the amount as revenue. The entity also includes a qualitative discussion about any significant variable consideration that is not included in the disclosure. The information for Contract C included in the overall disclosure is as follows:
Revenue expected to be recognised on this contract as of 31 December 20X7

<table>
<thead>
<tr>
<th></th>
<th>20X8</th>
<th>20X9</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU</td>
<td>1,575(a)</td>
<td>788(b)</td>
<td>2,363</td>
</tr>
</tbody>
</table>

(a) Transaction price = CU3,150 (CU100 × 24 months + CU750 variable consideration) recognised evenly over 24 months at CU1,575 per year.
(b) CU1,575 ÷ 2 = CU788 (ie for 6 months of the year).

In addition, in accordance with paragraph 122 of IFRS 15, the entity discloses qualitatively that part of the performance bonus has been excluded from the disclosure because it was not included in the transaction price. That part of the performance bonus was excluded from the transaction price in accordance with the requirements for constraining estimates of variable consideration.

**Example 43—Disclosure of the transaction price allocated to the remaining performance obligations—qualitative disclosure**

On 1 January 20X2, an entity enters into a contract with a customer to construct a commercial building for fixed consideration of CU10 million. The construction of the building is a single performance obligation that the entity satisfies over time. As of 31 December 20X2, the entity has recognised CU3.2 million of revenue. The entity estimates that construction will be completed in 20X3, but it is possible that the project will be completed in the first half of 20X4.

At 31 December 20X2, the entity discloses the amount of the transaction price that has not yet been recognised as revenue in its disclosure of the transaction price allocated to the remaining performance obligations. The entity also discloses an explanation of when the entity expects to recognise that amount as revenue. The explanation can be disclosed either on a quantitative basis using time bands that are most appropriate for the duration of the remaining performance obligation or by providing a qualitative explanation. Because the entity is uncertain about the timing of revenue recognition, the entity discloses this information qualitatively as follows:

‘As of 31 December 20X2, the aggregate amount of the transaction price allocated to the remaining performance obligation is CU6.8 million and the entity will recognise this revenue as the building is completed, which is expected to occur over the next 12–18 months.’

**Warranties**

Example 44 illustrates the requirements in paragraphs B28–B33 of IFRS 15 on warranties. In addition, Example 44 illustrates the requirements in paragraphs 27–29 of IFRS 15 on identifying performance obligations.

**Example 44—Warranties**

An entity, a manufacturer, provides its customer with a warranty with the purchase of a product. The warranty provides assurance that the product complies with agreed-upon specifications and will operate as promised for one...
year from the date of purchase. The contract also provides the customer with
the right to receive up to 20 hours of training services on how to operate the
product at no additional cost.

IE224 The entity assesses the goods and services in the contract to determine whether
they are distinct and therefore give rise to separate performance obligations.

IE225 The product is distinct because it meets both criteria in paragraph 27 of IFRS 15.
The product is capable of being distinct in accordance with paragraphs 27(a)
and 28 of IFRS 15, because the customer can benefit from the product on its own
without the training services. The entity regularly sells the product separately
without the training services. In addition, the product is distinct within the
context of the contract in accordance with paragraphs 27(b) and 29 of IFRS 15,
because the entity’s promise to transfer the product is separately identifiable
from other promises in the contract.

IE226 In addition, the training services are distinct because they meet both criteria in
paragraph 27 of IFRS 15. The training services are capable of being distinct in
accordance with paragraphs 27(a) and 28 of IFRS 15, because the customer can
benefit from the training services together with the product that has already
been provided by the entity. In addition, the training services are distinct within
the context of the contract in accordance with paragraphs 27(b) and 29 of
IFRS 15, because the entity’s promise to transfer the training services are
separately identifiable from other promises in the contract. The entity does not
provide a significant service of integrating the training services with the product
(see paragraph 29(a) of IFRS 15). The training services are not significantly
modified or customised by the product (see paragraph 29(b) of IFRS 15). The
training services are not highly dependent on, or highly interrelated with, the
product (see paragraph 29(c) of IFRS 15).

IE227 The product and training services are each distinct and therefore give rise to two
separate performance obligations.

IE228 Finally, the entity assesses the promise to provide a warranty and observes that
the warranty provides the customer with the assurance that the product will
function as intended for one year. The entity concludes, in accordance with
paragraphs B28–B33 of IFRS 15, that the warranty does not provide the customer
with a good or service in addition to that assurance and, therefore, the entity
does not account for it as a performance obligation. The entity accounts for the
assurance-type warranty in accordance with the requirements in IAS 37.

IE229 As a result, the entity allocates the transaction price to the two performance
obligations (the product and the training services) and recognises revenue when
(or as) those performance obligations are satisfied.

Principal versus agent considerations

IE230 Examples 45–48 illustrate the requirements in paragraphs B34–B38 of IFRS 15
on principal versus agent considerations.
Example 45—Arranging for the provision of goods or services (entity is an agent)

IE231 An entity operates a website that enables customers to purchase goods from a range of suppliers who deliver the goods directly to the customers. When a good is purchased via the website, the entity is entitled to a commission that is equal to 10 per cent of the sales price. The entity’s website facilitates payment between the supplier and the customer at prices that are set by the supplier. The entity requires payment from customers before orders are processed and all orders are non-refundable. The entity has no further obligations to the customer after arranging for the products to be provided to the customer.

IE232 To determine whether the entity’s performance obligation is to provide the specified goods itself (ie the entity is a principal) or to arrange for the supplier to provide those goods (ie the entity is an agent), the entity considers the nature of its promise. Specifically, the entity observes that the supplier of the goods delivers its goods directly to the customer and thus the entity does not obtain control of the goods. Instead, the entity’s promise is to arrange for the supplier to provide those goods to the customer. In reaching that conclusion, the entity considers the following indicators from paragraph B37 of IFRS 15 as follows:

(a) the supplier is primarily responsible for fulfilling the contract—ie by shipping the goods to the customer;
(b) the entity does not take inventory risk at any time during the transaction because the goods are shipped directly by the supplier to the customer;
(c) the entity’s consideration is in the form of a commission (10 per cent of the sales price);
(d) the entity does not have discretion in establishing prices for the supplier’s goods and, therefore, the benefit the entity can receive from those goods is limited; and
(e) neither the entity, nor the supplier, has credit risk because payments from customers are made in advance.

IE233 Consequently, the entity concludes that it is an agent and its performance obligation is to arrange for the provision of goods by the supplier. When the entity satisfies its promise to arrange for the goods to be provided by the supplier to the customer (which, in this example, is when goods are purchased by the customer), the entity recognises revenue in the amount of the commission to which it is entitled.

Example 46—Promise to provide goods or services (entity is a principal)

IE234 An entity enters into a contract with a customer for equipment with unique specifications. The entity and the customer develop the specifications for the equipment, which the entity communicates to a supplier that the entity contracts with to manufacture the equipment. The entity also arranges to have the supplier deliver the equipment directly to the customer. Upon delivery of
the equipment to the customer, the terms of the contract require the entity to pay the supplier the price agreed to by the entity and the supplier for manufacturing the equipment.

IE235 The entity and the customer negotiate the selling price and the entity invoices the customer for the agreed-upon price with 30-day payment terms. The entity’s profit is based on the difference between the sales price negotiated with the customer and the price charged by the supplier.

IE236 The contract between the entity and the customer requires the customer to seek remedies for defects in the equipment from the supplier under the supplier’s warranty. However, the entity is responsible for any corrections to the equipment required resulting from errors in specifications.

IE237 To determine whether the entity’s performance obligation is to provide the specified goods or services itself (ie the entity is a principal) or to arrange for another party to provide those goods or services (ie the entity is an agent), the entity considers the nature of its promise. The entity has promised to provide the customer with specialised equipment; however, the entity has subcontracted the manufacturing of the equipment to the supplier. In determining whether the entity obtains control of the equipment before control transfers to the customer and whether the entity is a principal, the entity considers the indicators in paragraph B37 of IFRS 15 as follows:

(a) the entity is primarily responsible for fulfilling the contract. Although the entity subcontracted the manufacturing, the entity is ultimately responsible for ensuring that the equipment meets the specifications for which the customer has contracted.

(b) the entity has inventory risk because of its responsibility for corrections to the equipment resulting from errors in specifications, even though the supplier has inventory risk during production and before shipment.

(c) the entity has discretion in establishing the selling price with the customer, and the profit earned by the entity is an amount that is equal to the difference between the selling price negotiated with the customer and the amount to be paid to the supplier.

(d) the entity’s consideration is not in the form of a commission.

(e) the entity has credit risk for the amount receivable from the customer in exchange for the equipment.

IE238 The entity concludes that its promise is to provide the equipment to the customer. On the basis of the indicators in paragraph B37 of IFRS 15, the entity concludes that it controls the equipment before it is transferred to the customer. Thus, the entity is a principal in the transaction and recognises revenue in the gross amount of consideration to which it is entitled from the customer in exchange for the equipment.

**Example 47—Promise to provide goods or services (entity is a principal)**

IE239 An entity negotiates with major airlines to purchase tickets at reduced rates compared with the price of tickets sold directly by the airlines to the public. The
entity agrees to buy a specific number of tickets and must pay for those tickets regardless of whether it is able to resell them. The reduced rate paid by the entity for each ticket purchased is negotiated and agreed in advance.

IE240 The entity determines the prices at which the airline tickets will be sold to its customers. The entity sells the tickets and collects the consideration from customers when the tickets are purchased; therefore there is no credit risk.

IE241 The entity also assists the customers in resolving complaints with the service provided by airlines. However, each airline is responsible for fulfilling obligations associated with the ticket, including remedies to a customer for dissatisfaction with the service.

IE242 To determine whether the entity’s performance obligation is to provide the specified goods or services itself (i.e. the entity is a principal) or to arrange for another party to provide those goods or services (i.e. the entity is an agent), the entity considers the nature of its promise. The entity determines that its promise is to provide the customer with a ticket, which provides the right to fly on the specified flight or another flight if the specified flight is changed or cancelled. In determining whether the entity obtains control of the right to fly before control transfers to the customer and whether the entity is a principal, the entity considers the indicators in paragraph B37 of IFRS 15 as follows:

(a) the entity is primarily responsible for fulfilling the contract, which is providing the right to fly. However, the entity is not responsible for providing the flight itself, which will be provided by the airline.

(b) the entity has inventory risk for the tickets because they are purchased before they are sold to the entity’s customers and the entity is exposed to any loss as a result of not being able to sell the tickets for more than the entity’s cost.

(c) the entity has discretion in setting the sales prices for tickets to its customers.

(d) as a result of the entity’s ability to set the sales prices, the amount that the entity earns is not in the form of a commission, but instead depends on the sales price it sets and the costs of the tickets that were negotiated with the airline.

IE243 The entity concludes that its promise is to provide a ticket (i.e. a right to fly) to the customer. On the basis of the indicators in paragraph B37 of IFRS 15, the entity concludes that it controls the ticket before it is transferred to the customer. Thus, the entity concludes that it is a principal in the transaction and recognises revenue in the gross amount of consideration to which it is entitled in exchange for the tickets transferred.

Example 48—Arranging for the provision of goods or services (entity is an agent)

IE244 An entity sells vouchers that entitle customers to future meals at specified restaurants. These vouchers are sold by the entity and the sales price of the voucher provides the customer with a significant discount when compared with the normal selling prices of the meals (for example, a customer pays CU100 for a
voucher that entitles the customer to a meal at a restaurant that would otherwise cost CU200). The entity does not purchase vouchers in advance; instead, it purchases vouchers only as they are requested by the customers. The entity sells the vouchers through its website and the vouchers are non-refundable.

IE245 The entity and the restaurants jointly determine the prices at which the vouchers will be sold to customers. The entity is entitled to 30 per cent of the voucher price when it sells the voucher. The entity has no credit risk because the customers pay for the vouchers when purchased.

IE246 The entity also assists the customers in resolving complaints about the meals and has a buyer satisfaction programme. However, the restaurant is responsible for fulfilling obligations associated with the voucher, including remedies to a customer for dissatisfaction with the service.

IE247 To determine whether the entity is a principal or an agent, the entity considers the nature of its promise and whether it takes control of the voucher (i.e., a right) before control transfers to the customer. In making this determination, the entity considers the indicators in paragraph B37 of IFRS 15 as follows:

(a) the entity is not responsible for providing the meals itself, which will be provided by the restaurants;

(b) the entity does not have inventory risk for the vouchers because they are not purchased before being sold to customers and the vouchers are non-refundable;

(c) the entity has some discretion in setting the sales prices for vouchers to customers, but the sales prices are jointly determined with the restaurants; and

(d) the entity’s consideration is in the form of a commission, because it is entitled to a stipulated percentage (30 per cent) of the voucher price.

IE248 The entity concludes that its promise is to arrange for goods or services to be provided to customers (the purchasers of the vouchers) in exchange for a commission. On the basis of the indicators in paragraph B37 of IFRS 15, the entity concludes that it does not control the vouchers that provide a right to meals before they are transferred to the customers. Thus, the entity concludes that it is an agent in the arrangement and recognises revenue in the net amount of consideration to which the entity will be entitled in exchange for the service, which is the 30 per cent commission it is entitled to upon the sale of each voucher.

Customer options for additional goods or services

IE249 Examples 49–52 illustrate the requirements in paragraphs B39–B43 of IFRS 15 on customer options for additional goods or services. Example 50 illustrates the requirements in paragraphs 27–29 of IFRS 15 on identifying performance obligations. Example 52 illustrates a customer loyalty programme. That example may not apply to all customer loyalty arrangements because the terms and conditions may differ. In particular, when there are more than two parties
to the arrangement, an entity should consider all facts and circumstances to
determine the customer in the transaction that gives rise to the award credits.

**Example 49—Option that provides the customer with a material right (discount voucher)**

An entity enters into a contract for the sale of Product A for CU100. As part of
the contract, the entity gives the customer a 40 per cent discount voucher for
any future purchases up to CU100 in the next 30 days. The entity intends to
offer a 10 per cent discount on all sales during the next 30 days as part of a
seasonal promotion. The 10 per cent discount cannot be used in addition to the
40 per cent discount voucher.

Because all customers will receive a 10 per cent discount on purchases during
the next 30 days, the only discount that provides the customer with a material
right is the discount that is incremental to that 10 per cent (ie the additional
30 per cent discount). The entity accounts for the promise to provide the
incremental discount as a performance obligation in the contract for the sale of
Product A.

To estimate the stand-alone selling price of the discount voucher in accordance
with paragraph B42 of IFRS 15, the entity estimates an 80 per cent likelihood
that a customer will redeem the voucher and that a customer will, on average,
purchase CU50 of additional products. Consequently, the entity’s estimated
stand-alone selling price of the discount voucher is CU12 (CU50 average
purchase price of additional products × 30 per cent incremental discount × 80
per cent likelihood of exercising the option). The stand-alone selling prices of
Product A and the discount voucher and the resulting allocation of the CU100
transaction price are as follows:

<table>
<thead>
<tr>
<th>Performance obligation</th>
<th>Stand-alone selling price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product A</td>
<td>CU 100</td>
</tr>
<tr>
<td>Discount voucher</td>
<td>CU 12</td>
</tr>
<tr>
<td>Total</td>
<td>CU 112</td>
</tr>
</tbody>
</table>

The entity allocates CU89 to Product A and recognises revenue for Product A
when control transfers. The entity allocates CU11 to the discount voucher and
recognises revenue for the voucher when the customer redeems it for goods or
services or when it expires.
Example 50—Option that does not provide the customer with a material right (additional goods or services)

An entity in the telecommunications industry enters into a contract with a customer to provide a handset and monthly network service for two years. The network service includes up to 1,000 call minutes and 1,500 text messages each month for a fixed monthly fee. The contract specifies the price for any additional call minutes or texts that the customer may choose to purchase in any month. The prices for those services are equal to their stand-alone selling prices.

The entity determines that the promises to provide the handset and network service are each separate performance obligations. This is because the customer can benefit from the handset and network service either on their own or together with other resources that are readily available to the customer in accordance with the criterion in paragraph 27(a) of IFRS 15. In addition, the handset and network service are separately identifiable in accordance with the criterion in paragraph 27(b) of IFRS 15 (on the basis of the factors in paragraph 29 of IFRS 15).

The entity determines that the option to purchase the additional call minutes and texts does not provide a material right that the customer would not receive without entering into the contract (see paragraph B41 of IFRS 15). This is because the prices of the additional call minutes and texts reflect the stand-alone selling prices for those services. Because the option for additional call minutes and texts does not grant the customer a material right, the entity concludes it is not a performance obligation in the contract. Consequently, the entity does not allocate any of the transaction price to the option for additional call minutes or texts. The entity will recognise revenue for the additional call minutes or texts if and when the entity provides those services.

Example 51—Option that provides the customer with a material right (renewal option)

An entity enters into 100 separate contracts with customers to provide one year of maintenance services for CU1,000 per contract. The terms of the contracts specify that at the end of the year, each customer has the option to renew the maintenance contract for a second year by paying an additional CU1,000. Customers who renew for a second year are also granted the option to renew for a third year for CU1,000. The entity charges significantly higher prices for maintenance services to customers that do not sign up for the maintenance services initially (ie when the products are new). That is, the entity charges CU3,000 in Year 2 and CU5,000 in Year 3 for annual maintenance services if a customer does not initially purchase the service or allows the service to lapse.

The entity concludes that the renewal option provides a material right to the customer that it would not receive without entering into the contract, because the price for maintenance services are significantly higher if the customer elects to purchase the services only in Year 2 or 3. Part of each customer’s payment of CU1,000 in the first year is, in effect, a non-refundable prepayment of the services to be provided in a subsequent year. Consequently, the entity concludes that the promise to provide the option is a performance obligation.
The renewal option is for a continuation of maintenance services and those services are provided in accordance with the terms of the existing contract. Instead of determining the stand-alone selling prices for the renewal options directly, [Refer: paragraph B42] the entity allocates the transaction price by determining the consideration that it expects to receive in exchange for all the services that it expects to provide, in accordance with paragraph B43 of IFRS 15.

The entity expects 90 customers to renew at the end of Year 1 (90 per cent of contracts sold) and 81 customers to renew at the end of Year 2 (90 per cent of the 90 customers that renewed at the end of Year 1 will also renew at the end of Year 2, that is 81 per cent of contracts sold).

At contract inception, the entity determines the expected consideration for each contract is CU2,710 \[CU1,000 + (90 \text{ per cent } \times CU1,000) + (81 \text{ per cent } \times CU1,000)\]. The entity also determines that recognising revenue on the basis of costs incurred relative to the total expected costs depicts the transfer of services to the customer. Estimated costs for a three-year contract are as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Expected Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>600</td>
</tr>
<tr>
<td>Year 2</td>
<td>750</td>
</tr>
<tr>
<td>Year 3</td>
<td>1,000</td>
</tr>
</tbody>
</table>

Accordingly, the pattern of revenue recognition expected at contract inception for each contract is as follows:

<table>
<thead>
<tr>
<th>Expected costs adjusted for likelihood of contract renewal</th>
<th>Allocation of consideration expected</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CU</strong></td>
<td><strong>CU</strong></td>
</tr>
<tr>
<td>Year 1</td>
<td>600 (CU600 × 100%)</td>
</tr>
<tr>
<td>Year 2</td>
<td>675 (CU750 × 90%)</td>
</tr>
<tr>
<td>Year 3</td>
<td>810 (CU1,000 × 81%)</td>
</tr>
<tr>
<td>Total</td>
<td>2,085</td>
</tr>
</tbody>
</table>

Consequently, at contract inception, the entity allocates the option to renew at the end of Year 1 CU22,000 of the consideration received to date [cash of CU100,000 - revenue to be recognised in Year 1 of CU78,000 (CU780 × 100)].

Assuming there is no change in the entity’s expectations and the 90 customers renew as expected, at the end of the first year, the entity has collected cash of CU190,000 \[(100 \times CU1,000) + (90 \times CU1,000)\], has recognised revenue of CU78,000 (CU780 × 100) and has recognised a contract liability of CU112,000.

Consequently, upon renewal at the end of the first year, the entity allocates CU24,300 to the option to renew at the end of Year 2 [cumulative cash of CU190,000 less cumulative revenue recognised in Year 1 and to be recognised in Year 2 of CU165,700 (CU78,000 + CU877 × 100)].
If the actual number of contract renewals was different than what the entity expected, the entity would update the transaction price and the revenue recognised accordingly.

**Example 52—Customer loyalty programme**

An entity has a customer loyalty programme that rewards a customer with one customer loyalty point for every CU10 of purchases. Each point is redeemable for a CU1 discount on any future purchases of the entity’s products. During a reporting period, customers purchase products for CU100,000 and earn 10,000 points that are redeemable for future purchases. The consideration is fixed and the stand-alone selling price of the purchased products is CU100,000. The entity expects 9,500 points to be redeemed. The entity estimates a stand-alone selling price of CU0.95 per point (totalling CU9,500) on the basis of the likelihood of redemption in accordance with paragraph B42 of IFRS 15.

The points provide a material right to customers that they would not receive without entering into a contract. Consequently, the entity concludes that the promise to provide points to the customer is a performance obligation. 

The entity allocates the transaction price (CU100,000) to the product and the points on a relative stand-alone selling price basis as follows:

<table>
<thead>
<tr>
<th></th>
<th>CU</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product</td>
<td>91,324 [CU100,000 × (CU100,000 stand-alone selling price ÷ CU109,500)]</td>
</tr>
<tr>
<td>Points</td>
<td>8,676 [CU100,000 × (CU9,500 stand-alone selling price ÷ CU109,500)]</td>
</tr>
</tbody>
</table>

At the end of the first reporting period, 4,500 points have been redeemed and the entity continues to expect 9,500 points to be redeemed in total. The entity recognises revenue for the loyalty points of CU4,110 [(4,500 points ÷ 9,500 points) × CU8,676] and recognises a contract liability of CU4,566 (CU8,676 – CU4,110) for the unredeemed points at the end of the first reporting period.

At the end of the second reporting period, 8,500 points have been redeemed cumulatively. The entity updates its estimate of the points that will be redeemed and now expects that 9,700 points will be redeemed. The entity recognises revenue for the loyalty points of CU3,493 ([(8,500 total points redeemed ÷ 9,700 total points expected to be redeemed) × CU8,676 initial allocation] – CU4,110 recognised in the first reporting period). The contract liability balance is CU1,073 (CU8,676 initial allocation – CU7,603 of cumulative revenue recognised).

**Non-refundable upfront fees**

Example 53 illustrates the requirements in paragraphs B48–B51 of IFRS 15 on non-refundable upfront fees.

**Example 53—Non-refundable upfront fee**

An entity enters into a contract with a customer for one year of transaction processing services. The entity’s contracts have standard terms that are the...
The contract requires the customer to pay an upfront fee to set up the customer on the entity’s systems and processes. The fee is a nominal amount and is non-refundable. The customer can renew the contract each year without paying an additional fee.

IE273 The entity’s setup activities do not transfer a good or service to the customer and, therefore, do not give rise to a performance obligation.

IE274 The entity concludes that the renewal option does not provide a material right to the customer that it would not receive without entering into that contract (see paragraph B40 of IFRS 15). The upfront fee is, in effect, an advance payment for the future transaction processing services. Consequently, the entity determines the transaction price, which includes the non-refundable upfront fee, and recognises revenue for the transaction processing services as those services are provided in accordance with paragraph B49 of IFRS 15.

### Licensing

IE275 Examples 54–61 illustrate the requirements in paragraphs 22–30 of IFRS 15 for identifying performance obligations and paragraphs B52–B63 of IFRS 15 on licensing. These examples also illustrate other requirements as follows:

- paragraphs 39–45 of IFRS 15 on measuring progress towards complete satisfaction of a performance obligation (Example 58);
- paragraphs 84–86 of IFRS 15 on allocating variable consideration to performance obligations (Example 57); and
- paragraph B63 of IFRS 15 on consideration in the form of sales-based or usage-based royalties on licences of intellectual property (Examples 57 and 61).

### Example 54—Right to use intellectual property

IE276 Using the same facts as in Case A in Example 11 (see paragraphs IE49–IE53), the entity identifies four performance obligations in a contract:

- the software licence;
- installation services;
- software updates; and
- technical support.

IE277 The entity assesses the nature of its promise to transfer the software licence in accordance with paragraph B58 of IFRS 15. The entity observes that the software is functional at the time that the licence transfers to the customer, and the customer can direct the use of, and obtain substantially all of the remaining benefits from, the software when the licence transfers to the customer. Furthermore, the entity concludes that because the software is functional when it transfers to the customer, the customer does not reasonably expect the entity to undertake activities that significantly affect the intellectual property to which the licence relates. This is because at the point in time that the licence is transferred to the customer, the intellectual property will not change throughout the licence period. The entity does not consider in its assessment of
the criteria in paragraph B58 of IFRS 15 the promise to provide software updates, because they represent a separate performance obligation. Therefore, the entity concludes that none of the criteria in paragraph B58 of IFRS 15 are met and that the nature of the entity’s promise in transferring the licence is to provide a right to use the entity’s intellectual property as it exists at a point in time—ie the intellectual property to which the customer has rights is static. Consequently, the entity accounts for the licence as a performance obligation satisfied at a point in time.

Example 55—Licence of intellectual property

IE278 An entity enters into a contract with a customer to licence (for a period of three years) intellectual property related to the design and production processes for a good. The contract also specifies that the customer will obtain any updates to that intellectual property for new designs or production processes that may be developed by the entity. The updates are essential to the customer’s ability to use the licence, because the customer operates in an industry in which technologies change rapidly. The entity does not sell the updates separately and the customer does not have the option to purchase the licence without the updates.

IE279 The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. The entity determines that although the entity can conclude that the customer can obtain benefit from the licence on its own without the updates (see paragraph 27(a) of IFRS 15), that benefit would be limited because the updates are critical to the customer’s ability to continue to make use of the licence in the rapidly changing technological environment in which the customer operates. In assessing whether the criterion in paragraph 27(b) of IFRS 15 is met, the entity observes that the customer does not have the option to purchase the licence without the updates and the customer obtains limited benefit from the licence without the updates. Therefore, the entity concludes that the licence and the updates are highly interrelated and the promise to grant the licence is not distinct within the context of the contract, because the licence is not separately identifiable from the promise to provide the updates (in accordance with the criterion in paragraph 27(b) and the factors in paragraph 29 of IFRS 15).

IE280 The entity applies paragraphs 31–38 of IFRS 15 to determine whether the performance obligation (which includes the licence and the updates) is satisfied at a point in time or over time. The entity concludes that because the customer simultaneously receives and consumes the benefits of the entity’s performance as it occurs, the performance obligation is satisfied over time in accordance with paragraph 35(a) of IFRS 15.

Example 56—Identifying a distinct licence

IE281 An entity, a pharmaceutical company, licenses to a customer its patent rights to an approved drug compound for 10 years and also promises to manufacture the drug for the customer. The drug is a mature product; therefore the entity will not undertake any activities to support the drug, which is consistent with its customary business practices.
**Case A—Licence is not distinct**

IE282 In this case, no other entity can manufacture this drug because of the highly specialised nature of the manufacturing process. As a result, the licence cannot be purchased separately from the manufacturing services.

IE283 The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. The entity determines that the customer cannot benefit from the licence without the manufacturing service; therefore, the criterion in paragraph 27(a) of IFRS 15 is not met. Consequently, the licence and the manufacturing service are not distinct and the entity accounts for the licence and the manufacturing service as a single performance obligation.

IE284 The entity applies paragraphs 31–38 of IFRS 15 to determine whether the performance obligation (ie the bundle of the licence and the manufacturing services) is a performance obligation satisfied at a point in time or over time.

**Case B—Licence is distinct**

IE285 In this case, the manufacturing process used to produce the drug is not unique or specialised and several other entities can also manufacture the drug for the customer.

IE286 The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. Because the manufacturing process can be provided by other entities, the entity concludes that the customer can benefit from the licence on its own (ie without the manufacturing service) and that the licence is separately identifiable from the manufacturing process (ie the criteria in paragraph 27 of IFRS 15 are met). Consequently, the entity concludes that the licence and the manufacturing service are distinct and the entity has two performance obligations:

(a) licence of patent rights; and  
(b) manufacturing service.

IE287 The entity assesses, in accordance with paragraph B58 of IFRS 15, the nature of the entity’s promise to grant the licence. The drug is a mature product (ie it has been approved, is currently being manufactured and has been sold commercially for the last several years). For these types of mature products, the entity’s customary business practices are not to undertake any activities to support the drug. Consequently, the entity concludes that the criteria in paragraph B58 of IFRS 15 are not met because the contract does not require, and the customer does not reasonably expect, the entity to undertake activities that significantly affect the intellectual property to which the customer has rights. In its assessment of the criteria in paragraph B58 of IFRS 15, the entity does not take into consideration the separate performance obligation of promising to provide a manufacturing service. Consequently, the nature of the entity’s promise in transferring the licence is to provide a right to use the entity’s intellectual property in the form and the functionality with which it exists at the point in time that it is granted to the customer. Consequently, the entity accounts for the licence as a performance obligation satisfied at a point in time.
IE288 The entity applies paragraphs 31–38 of IFRS 15 to determine whether the manufacturing service is a performance obligation satisfied at a point in time or over time.

**Example 57—Franchise rights**

IE289 An entity enters into a contract with a customer and promises to grant a franchise licence that provides the customer with the right to use the entity’s trade name and sell the entity’s products for 10 years. In addition to the licence, the entity also promises to provide the equipment necessary to operate a franchise store. In exchange for granting the licence, the entity receives a sales-based royalty of five percent of the customer’s monthly sales. The fixed consideration for the equipment is CU150,000 payable when the equipment is delivered.

**Identifying performance obligations**

IE290 The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. The entity observes that the entity, as a franchisor, has developed a customary business practice to undertake activities such as analysing the customer’s changing preferences and implementing product improvements, pricing strategies, marketing campaigns and operational efficiencies to support the franchise name. However, the entity concludes that these activities do not directly transfer goods or services to the customer because they are part of the entity’s promise to grant a licence and, in effect, change the intellectual property to which the customer has rights.

IE291 The entity determines that it has two promises to transfer goods or services: a promise to grant a licence and a promise to transfer equipment. In addition, the entity concludes that the promise to grant the licence and the promise to transfer the equipment are distinct. This is because the customer can benefit from each promise (ie the promise of the licence and the promise of the equipment) on their own or together with other resources that are readily available (see paragraph 27(a) of IFRS 15). (That is, the customer can benefit from the licence together with the equipment that is delivered before the opening of the franchise and the equipment can be used in the franchise or sold for an amount other than scrap value.) The entity also determines that the franchise licence and equipment are separately identifiable, in accordance with the criterion in paragraph 27(b) of IFRS 15, because none of the factors in paragraph 29 of IFRS 15 are present. Consequently, the entity has two performance obligations:

(a) the franchise licence; and

(b) the equipment.

**Allocating the transaction price**

IE292 The entity determines that the transaction price includes fixed consideration of CU150,000 and variable consideration (five percent of customer sales).

IE293 The entity applies paragraph 85 of IFRS 15 to determine whether the variable consideration should be allocated entirely to the performance obligation to
transfer the franchise licence. The entity concludes that the variable consideration (ie the sales-based royalty) should be allocated entirely to the franchise licence because the variable consideration relates entirely to the entity’s promise to grant the franchise licence. In addition, the entity observes that allocating CU150,000 to the equipment and the sales-based royalty to the franchise licence would be consistent with an allocation based on the entity’s relative stand-alone selling prices in similar contracts. That is, the stand-alone selling price of the equipment is CU150,000 and the entity regularly licences franchises in exchange for five per cent of customer sales. Consequently, the entity concludes that the variable consideration (ie the sales-based royalty) should be allocated entirely to the performance obligation to grant the franchise licence.

Application guidance: licensing

IE294 The entity assesses, in accordance with paragraph B58 of IFRS 15, the nature of the entity’s promise to grant the franchise licence. The entity concludes that the criteria in paragraph B58 of IFRS 15 are met and the nature of the entity’s promise is to provide access to the entity’s intellectual property in its current form throughout the licence period. This is because:

(a) the entity concludes that the customer would reasonably expect that the entity will undertake activities that will affect the intellectual property to which the customer has rights. This is on the basis of the entity’s customary business practice to undertake activities such as analysing the customer’s changing preferences and implementing product improvements, pricing strategies, marketing campaigns and operational efficiencies. In addition, the entity observes that because part of its compensation is dependent on the success of the franchisee (as evidenced through the sales-based royalty), the entity has a shared economic interest with the customer that indicates that the customer will expect the entity to undertake those activities to maximise earnings.

(b) the entity also observes that the franchise licence requires the customer to implement any changes that result from those activities and thus exposes the customer to any positive or negative effects of those activities.

(c) the entity also observes that even though the customer may benefit from the activities through the rights granted by the licence, they do not transfer a good or service to the customer as those activities occur.

IE295 Because the criteria in paragraph B58 of IFRS 15 are met, the entity concludes that the promise to transfer the licence is a performance obligation satisfied over time in accordance with paragraph 35(a) of IFRS 15.

IE296 The entity also concludes that because the consideration is in the form of a sales-based royalty, the entity applies paragraph B63 of IFRS 15 and, after the transfer of the franchise licence, the entity recognises revenue as and when those sales occur.
Example 58—Access to intellectual property

IE297 An entity, a creator of comic strips, licenses the use of the images and names of its comic strip characters in three of its comic strips to a customer for a four-year term. There are main characters involved in each of the comic strips. However, newly created characters appear regularly and the images of the characters evolve over time. The customer, an operator of cruise ships, can use the entity’s characters in various ways, such as in shows or parades, within reasonable guidelines. The contract requires the customer to use the latest images of the characters.

IE298 In exchange for granting the licence, the entity receives a fixed payment of CU$1 million in each year of the four-year term.

IE299 In accordance with paragraph 27 of IFRS 15, the entity assesses the goods and services promised to the customer to determine which goods and services are distinct. The entity concludes that it has no other performance obligations other than the promise to grant a licence. That is, the additional activities associated with the licence do not directly transfer a good or service to the customer because they are part of the entity’s promise to grant a licence and, in effect, change the intellectual property to which the customer has rights.

IE300 The entity assesses the nature of the entity’s promise to transfer the licence in accordance with paragraph B58 of IFRS 15. In assessing the criteria the entity considers the following:

(a) the customer reasonably expects (arising from the entity’s customary business practices) that the entity will undertake activities that will affect the intellectual property to which the customer has rights (ie the characters). Those activities include development of the characters and the publishing of a weekly comic strip that includes the characters.

(b) the rights granted by the licence directly expose the customer to any positive or negative effects of the entity’s activities because the contract requires the customer to use the latest characters.

(c) even though the customer may benefit from those activities through the rights granted by the licence, they do not transfer a good or service to the customer as those activities occur.

IE301 Consequently, the entity concludes that the criteria in paragraph B58 of IFRS 15 are met and that the nature of the entity’s promise to transfer the licence is to provide the customer with access to the entity’s intellectual property as it exists throughout the licence period. Consequently, the entity accounts for the promised licence as a performance obligation satisfied over time (ie the criterion in paragraph 35(a) of IFRS 15 is met).

IE302 The entity applies paragraphs 39–45 of IFRS 15 to identify the method that best depicts its performance in the licence. Because the contract provides the customer with unlimited use of the licensed characters for a fixed term, the entity determines that a time-based method would be the most appropriate measure of progress towards complete satisfaction of the performance obligation.
Example 59—Right to use intellectual property

IE303 An entity, a music record label, licenses to a customer a 1975 recording of a classical symphony by a noted orchestra. The customer, a consumer products company, has the right to use the recorded symphony in all commercials, including television, radio and online advertisements for two years in Country A. In exchange for providing the licence, the entity receives fixed consideration of CU10,000 per month. The contract does not include any other goods or services to be provided by the entity. The contract is non-cancellable.

IE304 The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. The entity concludes that its only performance obligation is to grant the licence.

IE305 In accordance with paragraph B58 of IFRS 15, the entity assesses the nature of the entity’s promise to grant the licence. The entity does not have any contractual or implied obligations to change the licensed recording. Thus, the intellectual property to which the customer has rights is static. Consequently, the entity concludes that the nature of its promise in transferring the licence is to provide the customer with a right to use the entity’s intellectual property as it exists at the point in time that it is granted. Therefore, the promise to grant the licence is a performance obligation satisfied at a point in time. The entity recognises all of the revenue at the point in time when the customer can direct the use of, and obtain substantially all of the remaining benefits from, the licensed intellectual property.

IE306 Because of the length of time between the entity’s performance (at the beginning of the period) and the customer’s monthly payments over two years (which are non-cancellable), the entity considers the requirements in paragraphs 60–65 of IFRS 15 to determine whether a significant financing component exists.

Example 60—Access to intellectual property

IE307 An entity, a movie distribution company, licenses Movie XYZ to a customer. The customer, an operator of cinemas, has the right to show the movie in its cinemas for six weeks. In exchange for providing the licence, the entity will receive a portion of the operator’s ticket sales for Movie XYZ (ie variable consideration in the form of a sales-based royalty). The entity concludes that its only performance obligation is the promise to grant the licence.

IE308 The entity observes that regardless of whether the promise to grant the licence represents a right to access the entity’s intellectual property, or a right to use the entity’s intellectual property, the entity applies paragraph B63 of IFRS 15 and recognises revenue as and when the ticket sales occur. This is because the consideration for its licence of intellectual property is a sales-based royalty and the entity has already transferred the licence to the movie to which the sales-based royalty relates.
Example 61—Access to intellectual property

An entity, a well-known sports team, licenses the use of its name and logo to a customer. The customer, an apparel designer, has the right to use the sports team’s name and logo on items including t-shirts, caps, mugs and towels for one year. In exchange for providing the licence, the entity will receive fixed consideration of CU2 million and a royalty of five per cent of the sales price of any items using the team name or logo. The customer expects that the entity will continue to play games and provide a competitive team.

The entity assesses the goods and services promised to the customer to determine which goods and services are distinct in accordance with paragraph 27 of IFRS 15. The entity concludes that its only performance obligation is to transfer the licence. That is, the additional activities associated with the licence do not directly transfer a good or service to the customer because they are part of the entity’s promise to grant the licence and, in effect, change the intellectual property to which the customer has rights.

The entity assesses the nature of the entity’s promise to transfer the licence in accordance with paragraph B58 of IFRS 15. In assessing the criteria the entity considers the following:

(a) the entity concludes that the customer would reasonably expect that the entity will undertake activities that will affect the intellectual property (ie the team name and logo) to which the customer has rights. This is on the basis of the entity’s customary business practice to undertake activities such as continuing to play and providing a competitive team. In addition, the entity observes that because some of its consideration is dependent on the success of the customer (through the sales-based royalty), the entity has a shared economic interest with the customer, which indicates that the customer will expect the entity to undertake those activities to maximise earnings.

(b) the entity observes that the rights granted by the licence (ie the use of the team’s name and logo) directly expose the customer to any positive or negative effects of the entity’s activities.

(c) the entity also observes that even though the customer may benefit from the activities through the rights granted by the licence, they do not transfer a good or service to the customer as those activities occur.

The entity concludes that the criteria in paragraph B58 of IFRS 15 are met and the nature of the entity’s promise to grant the licence is to provide the customer with access to the entity’s intellectual property as it exists throughout the licence period. Consequently, the entity accounts for the promised licence as a performance obligation satisfied over time (ie the criterion in paragraph 35(a) of IFRS 15 is met).

The entity then applies paragraphs 39–45 of IFRS 15 to determine a measure of progress that will depict the entity’s performance for the fixed consideration. For the consideration that is in the form of a sales-based royalty, paragraph B63 of IFRS 15 applies; therefore, the entity recognises revenue as and when the sales of items using the team name or logo occur.
Repurchase agreements

Example 62 illustrates the requirements in paragraphs B64–B76 of IFRS 15 on repurchase agreements.

**Example 62—Repurchase agreements**

**IE315** An entity enters into a contract with a customer for the sale of a tangible asset on 1 January 20X7 for CU1 million.

**Case A—Call option: financing**

**IE316** The contract includes a call option that gives the entity the right to repurchase the asset for CU1.1 million on or before 31 December 20X7.

**IE317** Control of the asset does not transfer to the customer on 31 December 20X7 because the entity has a right to repurchase the asset and therefore the customer is limited in its ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. Consequently, in accordance with paragraph B66(b) of IFRS 15, the entity accounts for the transaction as a financing arrangement, because the exercise price is more than the original selling price. In accordance with paragraph B68 of IFRS 15, the entity does not derecognise the asset and instead recognises the cash received as a financial liability. The entity also recognises interest expense for the difference between the exercise price (CU1.1 million) and the cash received (CU1 million), which increases the liability.

**IE318** On 31 December 20X7, the option lapses unexercised; therefore, the entity derecognises the liability and recognises revenue of CU1.1 million.

**Case B—Put option: lease**

**IE319** Instead of having a call option, the contract includes a put option that obliges the entity to repurchase the asset at the customer’s request for CU900,000 on or before 31 December 20X7. The market value is expected to be CU750,000 on 31 December 20X7.

**IE320** At the inception of the contract, the entity assesses whether the customer has a significant economic incentive to exercise the put option, to determine the accounting for the transfer of the asset (see paragraphs B70–B76 of IFRS 15). The entity concludes that the customer has a significant economic incentive to exercise the put option because the repurchase price significantly exceeds the expected market value of the asset at the date of repurchase. The entity determines there are no other relevant factors to consider when assessing whether the customer has a significant economic incentive to exercise the put option. Consequently, the entity concludes that control of the asset does not transfer to the customer, because the customer is limited in its ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset.

**IE321** In accordance with paragraphs B70–B71 of IFRS 15, the entity accounts for the transaction as a lease in accordance with IAS 17 Leases.
Bill-and-hold arrangements

Example 63 illustrates the requirements in paragraphs B79–B82 of IFRS 15 on bill-and-hold arrangements.

**Example 63—Bill-and-hold arrangement**

IE323 An entity enters into a contract with a customer on 1 January 20X8 for the sale of a machine and spare parts. The manufacturing lead time for the machine and spare parts is two years.

IE324 Upon completion of manufacturing, the entity demonstrates that the machine and spare parts meet the agreed-upon specifications in the contract. The promises to transfer the machine and spare parts are distinct [Refer: paragraph 27] and result in two performance obligations that each will be satisfied at a point in time. On 31 December 20X9, the customer pays for the machine and spare parts, but only takes physical possession of the machine. Although the customer inspects and accepts the spare parts, the customer requests that the spare parts be stored at the entity’s warehouse because of its close proximity to the customer’s factory. The customer has legal title to the spare parts and the parts can be identified as belonging to the customer. Furthermore, the entity stores the spare parts in a separate section of its warehouse and the parts are ready for immediate shipment at the customer’s request. The entity expects to hold the spare parts for two to four years and the entity does not have the ability to use the spare parts or direct them to another customer.

IE325 The entity identifies the promise to provide custodial services as a performance obligation because it is a service provided to the customer and it is distinct from the machine and spare parts. Consequently, the entity accounts for three performance obligations in the contract (the promises to provide the machine, the spare parts and the custodial services). The transaction price is allocated to the three performance obligations and revenue is recognised when (or as) control transfers to the customer.

IE326 Control of the machine transfers to the customer on 31 December 20X9 when the customer takes physical possession. The entity assesses the indicators in paragraph 38 of IFRS 15 to determine the point in time at which control of the spare parts transfers to the customer, noting that the entity has received payment, the customer has legal title to the spare parts and the customer has inspected and accepted the spare parts. In addition, the entity concludes that all of the criteria in paragraph B81 of IFRS 15 are met, which is necessary for the entity to recognise revenue in a bill-and-hold arrangement. The entity recognises revenue for the spare parts on 31 December 20X9 when control transfers to the customer.

IE327 The performance obligation to provide custodial services is satisfied over time as the services are provided. The entity considers whether the payment terms include a significant financing component in accordance with paragraphs 60–65 of IFRS 15.
Appendix
Amendments to guidance on other Standards

The amendments in this appendix to the guidance on other Standards are necessary in order to ensure consistency with IFRS 15 and the related amendments to other Standards.

* * * * *

The amendments contained in this appendix when IFRS 15 was issued in 2014 have been incorporated into the guidance on the relevant Standards included in this volume.
