Methodology

Line Transect (population dynamics):

- The line transect methodology successfully used in wildlife studies for decades
- Estimation of the abundance of populations

Methodology

- A similar approach that allows quantification of welfare indicators could be a practical approach for welfare assessment.

Bill Douglas, Cooper Farms <https://www.fishbase.org/species/1190?base=species&page=details&base=1190&base=1190>

Methodology

Transect Walks for welfare assessment:

- Standardized walks divided in randomly set paths covering the full area of the house
- Transects width limited by location of feeder and drinker lines

Methodology

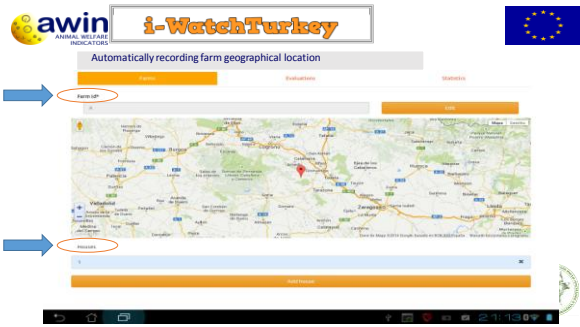

Facilitating the assessment

Smartphone app for turkey health and welfare assessment.

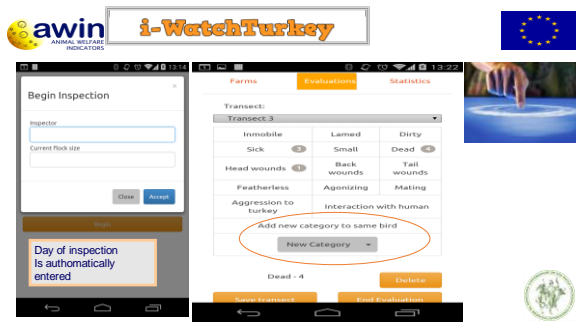

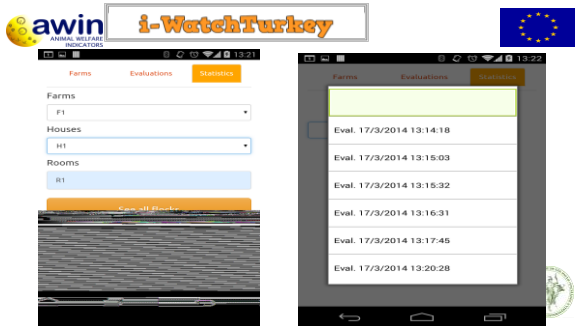

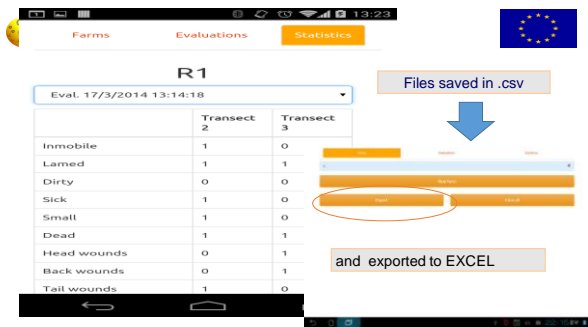

The app allows entering relevant information such as birds strain, birds age, housing and management conditions, expanding significantly the applications of the app...

Potential benefits

Potential benefits of the transect methodology:

- Identify, quantify and easily compare the prevalence of important welfare issues in a very simple manner
- Better quantify the impact of management factors

Further studies required to:

- Verify the reliability of the methodology under a large variety of situations
- To determine the predictive potential; expected final performance of the flock from historical data created by routine application of the method
- Increase opportunities of taking preventive actions

This project was financed by the VII Framework Program for Research, Technological development and Demonstration activities of the project Animal Welfare Indicators (FP7-KBBE-2010-4)

Our contribution with the HUB

Science based indicators of animal welfare are necessary to meet the current needs.

In order to promote transparency and good communication among stakeholders and interested parties in animal welfare, a resource, such as the Animal Welfare Science Hub (www.animalwelfarehub.com), should be maintained.

We hope to establish collaborative strategies with the International Society for Applied Ethology and, perhaps, with the OIE Collaborating Centres.

Future work

- On line training
- Creating global databases on animal welfare outcomes

enforce animal welfare policies
