

# INDEX

- Activity, 97
  - coefficient, 108
  - component in solution, 99
  - ideal gas, 98
  - standard state pressure, 98-101
- Activity quotient, 153
- Adiabatic:
  - boundary, 3
  - heat transfer, 21-22
  - process, 22
  - work, 22
- Allotropic (see polymorphic transformation)
- Allotropes, 47
- Athermal solution (see solutions)
- Atomic fraction (see mole fraction)
- Basic units, xv
- Boltzmann's constant, 54
- Calorie:
  - thermochemical, 16
- Carburizing (see gas)
- Carnot cycle, 45
- Change in state, 1
- Chemical potential, 121, 143
- Chemical reaction, 4
- Clapeyron equation, 146
- Clausius-Clapeyron equation, 147
- Coefficient:
  - isothermal compressibility, 7
  - volume thermal expansion, 7
- Cycle, 5
- Cyclic:
  - integral, 5
  - process, 5
- Dalton's law, 81
- Decarburization, 162
- Decarburizing (see gas)
- Degree of freedom or variance (see phase rule)
- Derived units, xiii
- Diathermic boundary, 3
- Differential:
  - condition for an exact, 8
  - exact, 5, 7, 9
  - inexact, 8, 9
  - partial, 7
  - total, 7
- Dilute solution model (see solutions: Henry's law)
- Disorder (see entropy)
- Dulong and Petit value, 40
- Electrochemical cell/half cell, 160
- Ellingham diagrams, 63, 117
- Endothermic process, 16, 155
- Energy:
  - internal, 21, 22
  - kinetic, 21
  - potential, 21
  - total molar, 21
- Enthalpy (see also thermodynamic relations, heat):
  - function, 22
  - of formation, 30
  - of fusion, 29
  - of reaction, 31
  - of solution, 123
  - solute binding, 164
  - standard state, 30, 31
  - transformation, 29
- Entropy (see also thermodynamic relations):
  - absolute standard, 48
  - disorder (randomness), 54
  - function, 45
  - net (total or universe), 52
  - of formation, 49
  - of reaction, 49
  - of solution, 123

## THERMODYNAMIC LOOP APPLICATIONS IN MATERIALS SYSTEMS

- of surroundings, 52
- of system, 52
- reversible, 52
- stability criteria, 52
- standard state, 49
- Equation of state, 6
- Equilibrium/Equilibria:
  - state, 2, 52
  - chemical, 2
  - heterogeneous, 81, 82, 97
  - mechanical, 2
  - thermal, 2
  - thermodynamic, 2
- Equilibrium constant, 153
  - temperature/pressure relationship, 155
- Exact differential (see differential)
- Exactness (see thermodynamic relations)
- Excess thermodynamic property, 111
- Exothermic process, 16, 155
- Extensive properties, 5
- Faraday's constant, 160
- First Law of Thermodynamics, 21
- Fugacity, 97
- Fusion, 27
- Gas (see also ideal and nonideal gas):
  - carburizing, 141, 143
  - decarburizing, 143
  - potential, 142, 145
- Getter, Gettering, 93, 151
- Gibbs-Duhem equation, 119
- Gibbs free energy:
  - function, 61
  - methods for determination, 63
  - of a gas, 81
  - of formation, 62
  - of reaction, 62
  - of solution, 123
  - stability criteria, 61
  - standard state, 62
- Gibbs-Helmholtz equation (see thermodynamic relations)
- Gibbs Phase Rule (see phase rule)
- Heat (see also enthalpy):
  - capacity, 23, 35
  - mechanical equivalent, 16
  - of formation, 30
  - of fusion, 29
  - of reaction, 31
  - path dependence, 8
  - reservoir, 45
  - sign conventions, 16
  - sink, 45
  - source, 45
  - transformation, 29
- Henrian behavior (see solutions: Henry's law)
- Henry's law (see solutions)
- Hess's law, 32
- Heterogeneous (see equilibrium)
- Hold temperature, 29
- Hooke's law, 7, 10
- Hydrogen environment cracking (HEC), 162
- Ideal gas:
  - activity, 98
  - equation of state, 6
  - internal energy, 21, 22
  - kinetic theory, 24
  - mixture, 81
  - partial pressure, 81
- Ideality (see also solutions: ideal)
  - positive and negative deviation, 108, 111
- Ideal solution (see solutions)
- Integral molar volume of mixing (see total molar mixing)
- Intensive properties, 5
- Internal energy (see energy)
- Irreversible process, 4, 53, 61
  - chemically, 4
  - mechanically, 4
  - thermally, 4
- Isentropic, 46
- Isobaric process, 6

- Isochoric or isometric process, 6, 22
- Isothermal process, 6
- LeChatelier's principle, 84, 155
- L'Hopital's rule and Gibbs free energy, 107
- Macroscopic, 1
  - coordinates, 1
  - state, 2
- Maxwell equations (see thermodynamic relations)
- Mechanical equivalent of heat (see heat)
- Molar solution, 160
- Mole fraction, xviii, 81
- Natural process (see irreversible process)
- Nernst equation, 160
- Nonideal (real) gas, 97
- Nonideality, 103
- Nonspontaneous process, 52, 61
- Partial molar (molal) property, 101
  - enthalpy and enthalpy of mixing, 103
  - entropy, 104
  - entropy of mixing, 104
  - Gibbs free energy and free energy of mixing, 103
  - volume and volume of mixing, 102
- Partial pressure, 81, 97
- Path dependent processes, 8
- Path independent properties, 5
- Phase (see also transformation), 1
- Phase diagram:
  - eutectic system: no solid solubility, 129
    - liquidus solution models, 131
  - eutectic system: terminal solid solubility, 139
    - liquidus solution models, 140
    - pressure effect on liquidus, 147
    - pressure effect on solvus, 148
- Phase Rule, 149
  - degree of freedom or variance, 149
- Polymorph, 27
- Polymorphic (allotropic) transformation, 4, 27, 47
- Pressure:
  - absolute, 18
  - gauge, 18
  - partial, 81
  - standard (see standard state)
- Product of activities, 154
- PVT system (see system)
- Quasi-chemical theory (see solutions)
- Quasi-static process, 4
- Randomness (see entropy)
- Raoultian solution behavior (see ideal solution)
- Raoult's law (see solutions)
- Real gas (see nonideal gas)
- Regular solution model (see solutions)
- Reservoirs (see heat)
- Residuals (see excess thermodynamic property)
- Reversible process, 4, 61
- Second Law of Thermodynamics, 45
- SI units, xv
- Sievert's law, 122
- Solid solution (see solutions)
- Solute (see solutions)
- Solutions:
  - athermal, 112
  - departure from ideality, 108, 111
  - Henrian and Henry's law, 108, 121
  - homogeneous, 101
  - ideal, 101, 104, 112, 121
  - nonideal, 101, 108, 121
  - partial molar, 101
  - quasi-chemical theory, 110
  - regular, 110, 112
  - Raoultian and Raoult's law, 104
  - solid, 99-100, 106, 110, 117-118, 126
  - solute, 101
  - solvent, 101
  - subregular, 113
  - tangential intercepts (method of), 102
- Solvent (see solutions)

## THERMODYNAMIC LOOP APPLICATIONS IN MATERIALS SYSTEMS

### Specific:

- heat capacity (see heat),  
mass basis, 5

### Spontaneous process (see irreversible process)

### Stability criteria (see entropy, Gibbs free energy)

### Stability diagram, 158-159

### Standard:

- state (see enthalpy, entropy, Gibbs free energy)
- state ideal gas pressure, 82
- state pressure, 30

### State function path, 33

### Steady state, 2

### Strain (uniaxial), 9

### Stress (uniaxial engineering), 9

### Sublimation, 29

### Subregular solution (see solutions)

### Supercooling, 37, 61

### Superheated steam, 66

### Surroundings, 1, 53

### System, 1, 61

- change in state, 2, 5
- closed, 1
- heterogeneous, 1
- homogeneous, 1
- isolated, 1
- open, 1
- properties (see path dependent and independent properties)
- PVT, 12

### Tangential intercepts (see solutions), 102

### Thermodynamic efficiency, 45

### Thermodynamic laws, 1, 3, 21, 45, 48

### Thermodynamic loop, 33

- analysis and Ellingham diagrams, 82
- analysis of heterogeneous reactions, 113
- Four S's, 35
- pressure dependence, 70
- Sievert's law, 122

### Thermodynamic relations:

- condition of exactness, 8, 72
- Gibbs-Helmholtz equation, 74
- introduction of a new variable, 72
- Maxwell equations, 72
- total enthalpy, 74
- total entropy, 74
- transformation formula, 72

### Third Law of Thermodynamics, 48

### Total molar mixing:

- volume (integral molar volume), 104
- enthalpy, 104
- entropy, 104
- Gibbs free energy, 104

### Transformation:

- phase, 27
- polymorphic, 4, 27
- temperature, 29

### Transformation formula (see thermodynamic relations)

### Univariant equilibrium, 146

### U.S. customary (British) units, xv

### Van't Hoff equation, 155

### Variance (see phase rule)

### Weathering rind, 95

### Work, 9

- quasi-static, 9, 12
- sign conventions, 9

### Yield point, 10

### Young's Modulus, 7, 10

### Zeroth Law of Thermodynamics, 3
