

**SMM5773 - Estrutura e propriedades dos
materiais poliméricos**

Horário das aulas: as quintas-feiras das
10h20 a 12h20 e segundo dia a definir—
Googel Meet

Antonio J. F. de Carvalho

SMM/EESC

toni@sc.usp.br

Objetivos do Curso:

Dois são os objetivos desse curso:

- Prover os participantes de erudição no tema do curso (Ciência dos Polímeros). Isso implica uma visão geral, abrangente e integrada dos principais tópicos sobre a ciência e tecnologia de polímeros,
- Aprofundar em conhecimentos específicos sobre polímeros que são considerados fundamentais.

Bibliografia

J.M.G. Cowie, V. Arrighi, Polymer Chemistry and Physics of Modern Materials, CRC Press, 3^a ed.

L. Akcelrud, Fundamentos da Ciência dos Polímeros, Manole, F.W. Billmeyer Jr., Textbook of Polymer Science, Wiley-Interscience, 3^a ed.

S.V. Canevarolo Jr., Ciência dos Polímeros, Artliber, 2^a ed.

A. Rudin, The Elements of Polymer Science and Eng., Academic Press, 1982.

J.R. Fried, Polymer Science and Technology, PHI Learning, 2^a ed.
Osswald/Menges, Materials Science of Polymers for Engineers, Hanser.

Avaliação: Duas provas, sendo uma na metade e a outra combinada com um seminário ao final do curso. Além disso, será solicitado uma monografia versando sobre todo o conteúdo organizada na forma de resumo onde deverão ser dados destaques aos pontos fundamentais(definições, equações etc.) (25 a 50 páginas), que terá peso 30% em relação a nota final onde cada uma das provas terá peso de 35% cada.

Chapter 1	Introduction	1
1.1	Birth of a Concept.....	1
1.2	Some Basic Definitions.....	2
1.3	Synthesis of Polymers.....	4
1.4	Nomenclature.....	4
1.5	Average Molar Masses and Distributions.....	8
1.6	Size and Shape.....	10
1.7	Configuration.....	12
1.8	The Glass Transition Temperature T_g and the Melting Temperature T_m	14
1.9	Elastomers, Fibers, and Plastics.....	16
1.10	Fiber-Forming Polymers.....	18
1.11	Plastics.....	18
1.12	Thermosetting Polymers.....	21
1.13	Elastomers.....	21
	Problems.....	25
	References.....	27
	Bibliography.....	27

Chapter 2	Step-Growth Polymerization.....	29
2.1	General Reactions.....	29
2.2	Reactivity of Functional Groups	30
2.3	Carothers Equation	31
2.4	Control of the Molar Mass.....	32
2.5	Stoichiometric Control of M_n	34
2.6	Kinetics	36
2.7	Molar Mass Distribution in Linear Systems.....	38
2.8	Average Molar Masses	39
2.9	Characteristics of Step-Growth Polymerization.....	40
2.10	Typical Step-Growth Reactions.....	40
2.11	Ring Formation.....	41
2.12	Nonlinear Step-Growth Reactions.....	42
2.13	Statistical Derivation.....	43
2.14	Comparison with Experiment.....	44
2.15	Polyurethanes.....	46
2.16	Thermosetting Polymers.....	49
	Problems	52
	References.....	56
	Bibliography	56

Chapter 3	Free-Radical Addition Polymerization	57
3.1	Addition Polymerization	57
3.2	Choice of Initiators	57
3.3	Free-Radical Polymerization	58
3.4	Initiators	59
3.4.1	Initiator Efficiency	60
3.5	Chain Growth	62
3.6	Termination	62
3.7	Steady-State Kinetics	63
3.8	High-Conversion Bulk Polymerizations	65
3.9	Chain Transfer	67
3.9.1	Consequences of Chain Transfer	70
3.10	Inhibitors and Retarders	70
3.11	Activation Energies and the Effect of Temperature	72
3.12	Thermodynamics of Radical Polymerization	73
3.13	Heats of Polymerization	76
3.14	Polymerization Processes	76
3.15	Features of Free-Radical Polymerization	79
3.16	Controlled Radical Polymerization	79
3.17	Nitroxide-Mediated Polymerizations	81
3.18	Atom Transfer Radical Polymerization (ATRP)	82
3.19	Reverse ATRP	83
3.20	Degenerative Chain Transfer Reaction (DT)	84
3.21	Reversible Addition Fragmentation Chain Transfer (RAFT)	84
3.22	CRP of Vinyl Chloride	87
3.23	The Kinetics of CRP Processes	87
3.24	Application to Experimental Data	90
	Problems	92
	References	96
	Bibliography	96

Chapter 4	Ionic Polymerization	99
4.1	General Characteristics.....	99
4.2	Cationic Polymerization.....	100
4.3	Propagation by Cationic Chain Carriers.....	101
4.4	Termination.....	102
4.5	General Kinetic Scheme.....	103
4.6	Energetics of Cationic Polymerization.....	103
4.7	Telechelic Polymers via Cationic Polymerization.....	104
4.8	Cationic Ring Opening Polymerization.....	105
4.9	Stable Carbocations.....	107
4.10	Anionic Polymerization.....	108
4.11	Living Polymers.....	109
4.12	Kinetics and Molar Mass Distribution in Living Anionic Systems.....	110
4.13	Metal Alkyl Initiators.....	114
4.14	Solvent and Gegen Ion Effects.....	114
4.15	Anionic Ring-Opening Polymerization.....	114
	Problems.....	116
	References.....	118
	Bibliography.....	119

Chapter 5	Linear Copolymers and Other Architectures	121
5.1	General Characteristics.....	121
5.2	Composition Drift.....	122
5.3	The Copolymer Equation.....	122
5.4	Monomer Reactivity Ratios.....	123
5.5	Reactivity Ratios and Copolymer Structure.....	124
5.6	Monomer Reactivities and Chain Initiation.....	127
5.7	Influence of Structural Effects on Monomer Reactivity Ratios.....	127
	5.7.1 Resonance Effects.....	127
	5.7.2 Polar Effects.....	129
5.8	The $Q-e$ Scheme.....	129
5.9	Alternating Copolymers.....	131
5.10	Block Copolymer Synthesis.....	133
	5.10.1 Transformation Reactions.....	135
	5.10.1.1 Cationic to CRP.....	137
	5.10.1.2 Anionic to CRP.....	138
	5.10.1.3 ROMP to ATRP.....	139
	5.10.1.4 Step-Growth ATRP.....	139
	5.10.2 Coupling Reactions.....	140
	5.10.3 Use of CRP Methods.....	142
5.11	Graft Copolymer Synthesis.....	145
5.12	Statistical and Gradient Copolymers.....	147
5.13	Complex Molecular Architectures.....	148
5.14	Dendrimers.....	149
	5.14.1 Divergent Growth.....	150
	5.14.2 Convergent Growth.....	151
	5.14.3 Dendrimer Molecular Weight.....	152
	5.14.4 Properties of Dendrimers.....	153
	5.14.5 Applications of Dendrimers.....	154
	Problems.....	155
	References.....	156
	Bibliography.....	156

Chapter 6	Polymer Stereochemistry	157
6.1	Architecture	157
6.2	Orientation	157
6.3	Configuration	158
	6.3.1 Monotactic Polymers	159
	6.3.2 Ditactic Polymers	160
	6.3.3 Polyethers	160
6.4	Geometric Isomerism	162
6.5	Conformation of Stereoregular Polymers	163
6.6	Factors Influencing Stereoregulation.....	165
6.7	Homogeneous Stereospecific Cationic Polymerizations.....	167
6.8	Homogeneous Stereoselective Anionic Polymerizations.....	168
6.9	Homogeneous Diene Polymerization.....	170
6.10	Summary	172
	Problems	172
	References.....	173
	Bibliography	173

Chapter 7	Polymerization Reactions Initiated by Metal Catalysts and Transfer Reactions	175
7.1	Polymerization Using Ziegler–Natta Catalysts.....	175
7.2	Nature of the Catalyst	176
7.3	Nature of Active Centers	177
7.4	Bimetallic Mechanism.....	177
7.5	Monometallic Mechanism.....	178
7.6	Stereoregulation	180
7.7	Ring-Opening Metathesis Polymerization (ROMP)	181
7.8	Monocyclic Monomers.....	182
7.9	Bicyclo- and Tricyclomonomers	183
7.10	Copolyalkenamers	184
7.11	Living Systems	184
7.12	Group Transfer Polymerization (GTP)	186
7.13	Aldol Group Transfer Polymerization.....	187
7.14	Metallocene Catalysts.....	188
	7.14.1 Metallocene/Aluminoxane Catalysts	189
	7.14.2 Stereoregulation.....	189
	7.14.3 Cationic Metallocenes.....	192
	7.14.4 Mechanism of Stereoregulation	192
7.15	Concluding Remarks	193
	Problems	194
	References.....	194
	Bibliography	194

Chapter 8	Polymers in Solution.....	197
8.1	Thermodynamics of Polymer Solutions.....	197
8.2	Ideal Mixtures of Small Molecules.....	197
8.3	Nonideal Solutions	199
8.5	Enthalpy Change on Mixing	203
8.6	Free Energy of Mixing	204
8.7	Limitations of the Flory–Huggins Theory	205
8.8	Phase Equilibria.....	206
8.9	Flory–Krigbaum Theory.....	208
8.10	Location of the Theta Temperature.....	210
8.11	Lower Critical Solution Temperatures	213
8.12	Solubility and the Cohesive Energy Density	216
8.13	Polymer–Polymer Mixtures.....	219
8.14	Kinetics of Phase Separation.....	223
	Problems	224
	References.....	227
	Bibliography	227

Chapter 9	Polymer Characterization — Molar Masses	229
9.1	Introduction	229
9.2	Molar Masses, Molecular Weights, and SI Units	229
9.3	Number-Average Molar Mass M_n	229
9.4	End-Group Assay	230
9.5	Colligative Properties of Solutions	230
9.6	Osmotic Pressure	231
9.7	Light Scattering	234
	9.7.1 Scattering from Large Particles	236
9.8	Dynamic Light Scattering	239
9.9	Viscosity	240
	9.9.1 Viscosity-Average Molecular Weight	242
9.10	Gel Permeation Chromatography	243
9.11	MALDI	247
	Problems	248
	References	251
	Bibliography	252

Chapter 10	Polymer Characterization — Chain Dimensions, Structures, and Morphology	253
10.1	Average Chain Dimensions	253
10.2	Freely Jointed Chain Model.....	254
10.3	Short-Range Effects.....	255
10.4	Chain Stiffness.....	255
10.5	Treatment of Dilute Solution Data.....	256
10.5.1	The Second Virial Coefficient.....	256
10.5.2	Expansion Factor α	257
10.5.3	Flory–Fox Theory	258
10.5.4	Indirect Estimates of Unperturbed Chain Dimensions.....	259
10.5.5	Influence of Tacticity on Chain Dimensions	259
10.6	Nuclear Magnetic Resonance (NMR).....	260
10.7	Infrared Spectroscopy.....	262
10.8	Thermal Analysis.....	264
10.9	Wide-Angle and Small-Angle Scattering.....	265
10.9.1	Wide-Angle X-Ray Scattering	266
10.9.2	Small-Angle X-Ray Scattering (SAXS)	267
10.9.3	Small-Angle Neutron Scattering (SANS).....	268
10.10	Microscopy	271
10.10.1	Optical Microscopy.....	272
10.10.2	Scanning Electron Microscopy	273
10.10.3	Transmission Electron Microscopy.....	274
10.10.4	Atomic Force Microscopy and Scanning Tunneling Microscopy	274
	Problems	276
	References.....	277
	Bibliography	277

Chapter 11	The Crystalline State and Partially Ordered Structures	279
11.1	Introduction.....	279
11.2	Mechanism of Crystallization	279
11.3	Temperature and Growth Rate	281
11.4	Melting.....	282
	11.4.1 Effect of Crystallite Size on Melting.....	282
11.5	Thermodynamic Parameters.....	282
11.6	Crystalline Arrangement of Polymers.....	285
	11.6.1 Factors Affecting Crystallinity and T_m	285
	11.6.1.1 Symmetry.....	285
	11.6.1.2 Intermolecular Bonding.....	286
	11.6.1.3 Tacticity	287
	11.6.1.4 Branching and Molar Mass.....	287
11.7	Morphology and Kinetics.....	287
11.8	Morphology	287
	11.8.1 Crystallites.....	288
	11.8.2 Single Crystals	288
	11.8.3 Hedrites	289
	11.8.4 Crystallization from the Melt.....	289
	11.8.5 Spherulites	291
11.9	Kinetics of Crystallization.....	292
	11.9.1 Isothermal Crystallization	293
	11.9.2 The Avrami Equation	293
	11.9.3 Deviations from Avrami Equation	294
11.10	Block Copolymers.....	294
11.11	Historical Development of Polymer Liquid Crystals	296
11.12	Liquid Crystalline Phases.....	297
11.13	Identification of the Mesophases.....	300

11.14	Lyotropic Main-Chain Liquid Crystal Polymers	302
11.15	Thermotropic Main-Chain Liquid Crystal Polymers.....	304
11.16	Side-Chain Liquid Crystal Polymers	309
11.17	Chiral Nematic Liquid Crystal Polymers.....	311
	Problems	314
	References.....	318
	Bibliography	318

Chapter 12	The Glassy State and Glass Transition	321
12.1	The Amorphous State	321
12.2	The Glassy State.....	321
12.3	Relaxation Processes in the Glassy State	321
12.4	Glass Transition Region	323
12.4.1	The Glass Transition Temperature, T_g	323
12.4.2	Experimental Demonstration of T_g	324
	12.4.2.1 Measurement of T_g from V–T Curves	325
	12.4.2.2 Thermal Methods	326
12.4.3	Factors Affecting T_g	327
	12.4.3.1 Chain Flexibility.....	328
	12.4.3.2 Steric Effects	328
	12.4.3.3 Configurational Effects.....	330
	12.4.3.4 Effect of Cross-Links on T_g	330
12.5	Theoretical Treatments	330
	12.5.1 The Free-Volume Theory	331
	12.5.2 Gibbs–Di Marzio Thermodynamic Theory	335
	12.5.3 Adam–Gibbs Theory	336
12.6	Dependence of T_g on Molar Mass	337
12.7	Structural Relaxation and Physical Aging	338
	Problems	339
	References.....	342
	Bibliography	343

Chapter 13	Rheology and Mechanical Properties	345
13.1	Introduction to Rheology.....	345
13.2	The Five Regions of Viscoelastic Behavior	346
13.3	The Viscous Region.....	347
13.3.1	Shear Dependence of Viscosity	349
13.3.2	Kinetic Units in Polymer Chains.....	351
13.3.3	Effect of Chain Length	352
13.3.4	Temperature Dependence of η	353
13.3.5	Concentration Dependence of Viscosity.....	353
13.3.6	Time-Dependent Behavior	354
13.4	Mechanical Properties	355
13.4.1	Interrelation of Moduli.....	357

13.5	Mechanical Models Describing Viscoelasticity	357
13.6	Linear Viscoelastic Behavior of Amorphous Polymers	360
13.6.1	Creep	360
13.6.2	Stress–Strain Measurements	363
13.6.3	Effect of Temperature on Stress–Strain Response	363
13.6.4	Boltzmann Superposition Principle	364
13.6.5	Stress Relaxation.....	365
13.7	Dynamic Mechanical and Dielectric Thermal Analysis	366
13.7.1	Dynamic Mechanical Thermal Analysis (DMTA)	366
13.7.2	Dielectric Thermal Analysis (DETA)	369
13.7.3	Comparison Between DMTA and DETA.....	371
13.8	Time–Temperature Superposition Principle.....	373
13.9	Dynamic Viscosity.....	377
13.10	A Molecular Theory for Viscoelasticity.....	378
13.11	The Reptation Model.....	380
	Problems	382
	References.....	387
	Bibliography	388

Chapter 14	The Elastomeric State	389
14.1	General Introduction.....	389
14.1.1	Natural Rubber.....	390
14.2	Experimental Vulcanization.....	391
14.3	Properties of Elastomers.....	391
14.4	Thermodynamic Aspects of Rubberlike Elasticity	392
14.5	Nonideal Elastomers.....	394
14.6	Distribution Function for Polymer Conformation	395
14.7	Statistical Approach.....	398
14.7.1	Experimental Stress–Strain Results	398
14.7.1.1	Simple Extension.....	398
14.7.1.2	Simple Compression.....	400
14.7.1.3	Pure Shear.....	400
14.7.1.4	Large Elastic Deformation	400
14.8	Swelling of Elastomeric Networks.....	400
14.9	Network Defects	401
14.10	Resilience of Elastomers	403
	Problems	405
	References.....	408
	Bibliography	408

Chapter 15	Structure–Property Relations	409
15.1	General Considerations	409
15.2	Control of T_m and T_g	409
15.2.1	Chain Stiffness	410
15.2.2	Intermolecular Bonding	411
15.3	Relation Between T_m and T_g	413
15.4	Random Copolymers	413
15.5	Dependence of T_m and T_g on Copolymer Composition	414
15.6	Block Copolymers	417
15.7	Plasticizers	419
15.8	Crystallinity and Mechanical Response	420
15.9	Application to Fibers, Elastomers, and Plastics	422
15.10	Fibers	422
15.10.1	Chemical Requirements	423
15.10.1.1	Linear Polyesters	425
15.10.2	Mechanical Requirements for Fibers	426
15.10.2.1	Spinning Techniques	426
15.10.2.1.1	Melt Spinning	426
15.10.2.1.2	Wet and Dry Spinning	426
15.10.2.2	Drawing, Orientation, and Crystallinity	427
15.10.2.3	Modulus and Chain Stiffness	428
15.10.2.4	Other Factors	428

15.11	Aromatic Polyamides	429
15.12	Polyethylene.....	431
15.13	Elastomers and Cross-Linked Networks	434
15.13.1	Cross-Linking	435
15.13.2	Creep in Cross-Linked Polymers.....	435
15.13.3	Additives.....	435
15.14	Plastics	435
15.14.1	Plastic Selection for Bottle Crate Manufacture.....	437
15.14.2	Medical Applications	438
15.15	High-Temperature Speciality Polymers	439
15.16	Carbon Fibers	446
15.17	Concluding Remarks	446
	Problems	448
	References.....	453
	Bibliography	454

Chapter 16	Polymers for the Electronics Industry	455
16.1	Introduction.....	455
16.2	Polymer Resists for IC Fabrication.....	455
16.3	The Lithographic Process.....	456
16.4	Polymer Resists	457
	16.4.1 Sensitivity	458
	16.4.2 Resolution.....	459
16.5	Photolithography.....	459
	16.5.1 Positive Photoresists.....	459
	16.5.2 Negative Photoresists	460
16.6	Electron Beam Sensitive Resists	463

16.6.1	Positive Resists.....	463
16.6.2	Negative Resists	464
16.7	X-ray and Ion Sensitive Resists	464
16.8	Electroactive Polymers	465
16.9	Conduction Mechanisms	466
16.10	Preparation of Conductive Polymers.....	467
16.11	Polyacetylene	469
16.12	Poly(<i>p</i> -phenylene).....	472
16.13	Polyheterocyclic Systems	474
16.13.1	Polypyrrole	475
16.13.2	Sulfur Compounds	475
16.14	Polyaniline	476
16.15	Poly(Phenylene Sulfide)	476
16.16	Poly(1,6-heptadiyne).....	476
16.17	Applications	476
16.18	Photonic Applications.....	477
16.19	Light-Emitting Polymers	477
16.19.1	Applications.....	478
16.20	Nonlinear Optics.....	478
16.21	Langmuir–Blodgett Films.....	481
16.22	Optical Information Storage.....	483
16.23	Thermorecording on Liquid Crystalline Polymers	486
	References.....	487
	Bibliography	487

Temas principais que compõem o curso (entre parênteses os capítulos correspondentes do Cowie):

1. Histórico, classificação, nomenclatura, materiais poliméricos, massa molar, forma e tamanho, (termoplásticos, termorrígidos, elastômeros, fibras sintéticas, adesivos, aditivos), aplicações. (cap 1)
2. Polimerização em etapas (policondensação). (cap. 2)
3. Polimerização por radicais livres (polimerização de adição ou em cadeia). (cap. 3)
4. Polimerização iônica e polimerização via ATRP. (cap. 4 e 5.10.1)
5. Copolímeros, polímeros enxertados, dendrímeros (cap. 5)
6. Conformação/configuração, estereoquímica, dimensões de cadeia. (cap. 6 e 10.1 - 10.4)
7. Polímeros em solução (cap. 8) e dimensões e rigidez das cadeias moleculares (cap. 10)
8. Determinação da massa molecular (cap. 9)
9. Cristalinidade. (cap. 11)
10. O estado vítreo, propriedades térmicas, temperaturas de transição. (cap. 12)
11. Reologia, propriedades mecânicas, viscoelasticidade e elastômeros. (cap. 13)
12. Relação estrutura-propriedades. (cap. 15)
13. Técnicas de caracterização de polímeros. (cap. 10)

Aula 01: Introdução Geral

Definição:

Os **polímeros** pertencem à classe das macromoléculas. No caso dos polímeros especificamente é possível observar uma estrutura (**unidades monoméricas**) que se repetem.

Plásticos: Comumente empregado como sinônimo de polímeros. Deveriam ficar restritos aos termoplásticos.

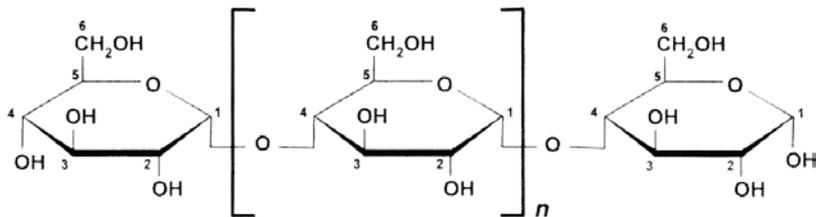

História: Origens do uso de materiais poliméricos

- Polímeros naturais:
 - Madeira
 - Algodão
 - Couro
 - Proteínas
 - Borracha
 - Seda
 - Lã
 - Celulose
- Primeiras aplicações mais conhecidas:
 - Bolas de borracha usadas pelos Incas
 - Betume

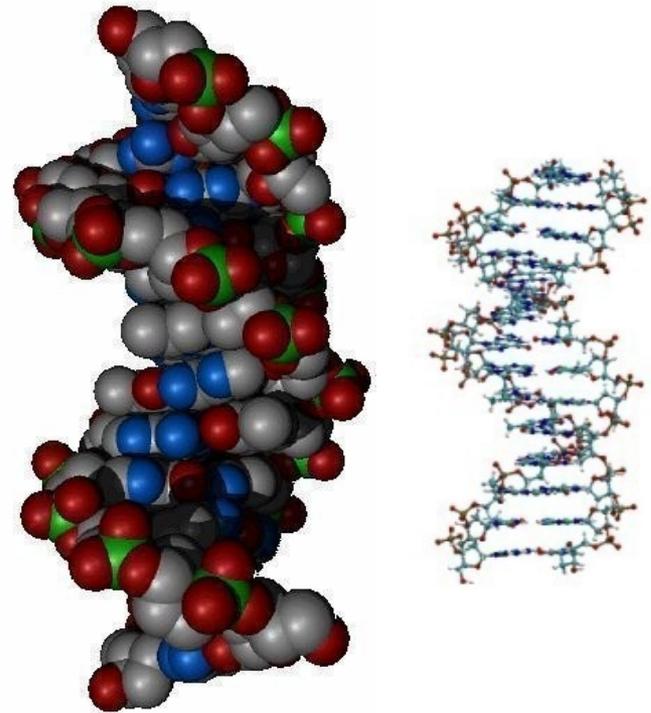

Polímeros ou Macromoléculas: O material de construção da natureza

Estrutural

Reserva de energia

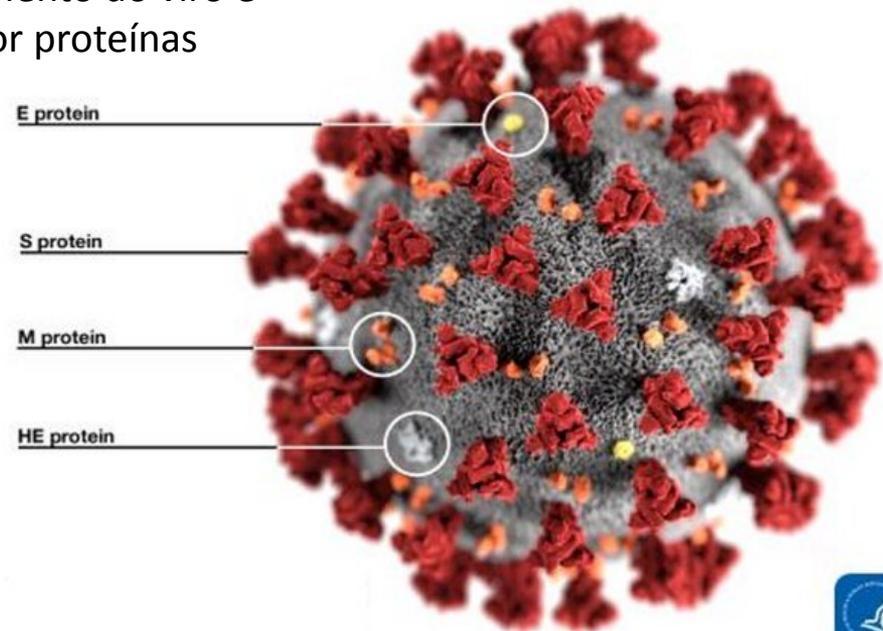

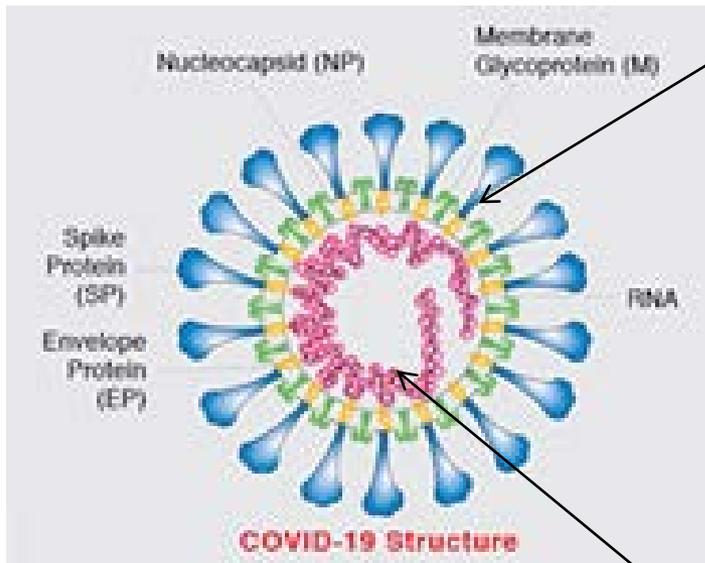

Codificação

Uma curiosidade atual: Os vírus são basicamente constituídos de macromoléculas

Por exemplo, o COVID-19

Toda estrutura de encapsulamento do viro é formada por proteínas

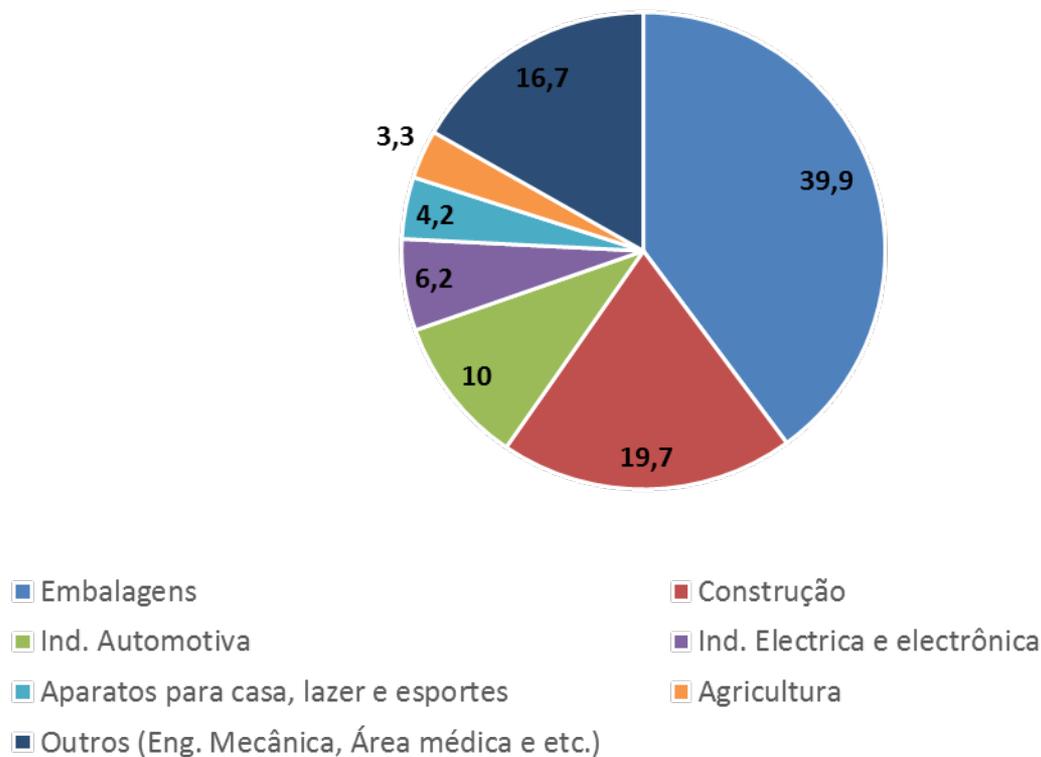

Macromolécula de RNA

Principais aplicações dos Plásticos

Demanda de plástico - Europa (2016)

A descoberta dos Polímeros precede a compreensão acerca de sua estrutura

Table 1. 19th Century Polymer Discoveries.

No.	Polymer	Inventor	Year
1.	cellulose nitrate	Braconnot	1833
2.	polyvinylidene chloride	Regnault	1838
3.	polystyrene	Simon	1839
4.	polyacrolein	Redtenbacher	1843
5.	polyoxymethylene	Butlerov	1859
6.	polyethyleneglycol	Lourenço	1860
7.	polyvinylidenebromide	Sawitsch	1861
8.	cellulose acetate	Schutzenberger	1869
9.	polyvinylchloride	Baumann	1872
10.	polyvinyl bromide	Hofmann	1872
11.	polyisobutene	Butlerov and Goryainov	1873
12.	polyisoprene	Bouchardat	1879
13.	phenol-formaldehyde resin	Bayer	1880
14.	polymethacrylic acid	Fitting and Engelhorn	1880
15.	poly(Me-, Eth- and Propyl-acrylate	Weger	1883
16.	polymethylene	Hinderman	1897

A descoberta dos Polímeros precede a compreensão acerca de sua estrutura

Em 1924 Herman Staudinger (cientista alemão) propôs um modelo que descrevia os polímeros como sendo formados por cadeias lineares.

H. Staudinger 1881 - 1965

A ideia de Staudinger de que os polímeros eram moléculas gigantes foi na época ridicularizada por seus pares que acreditavam que a borracha natural, por exemplo, era formada por agregados denominados de coloides.

Em 1953 Staudinger recebeu o Premio Nobel por sua contribuição pioneira na ciência dos polímeros.

WORLD PLASTICS PRODUCTION 1900 - 1990

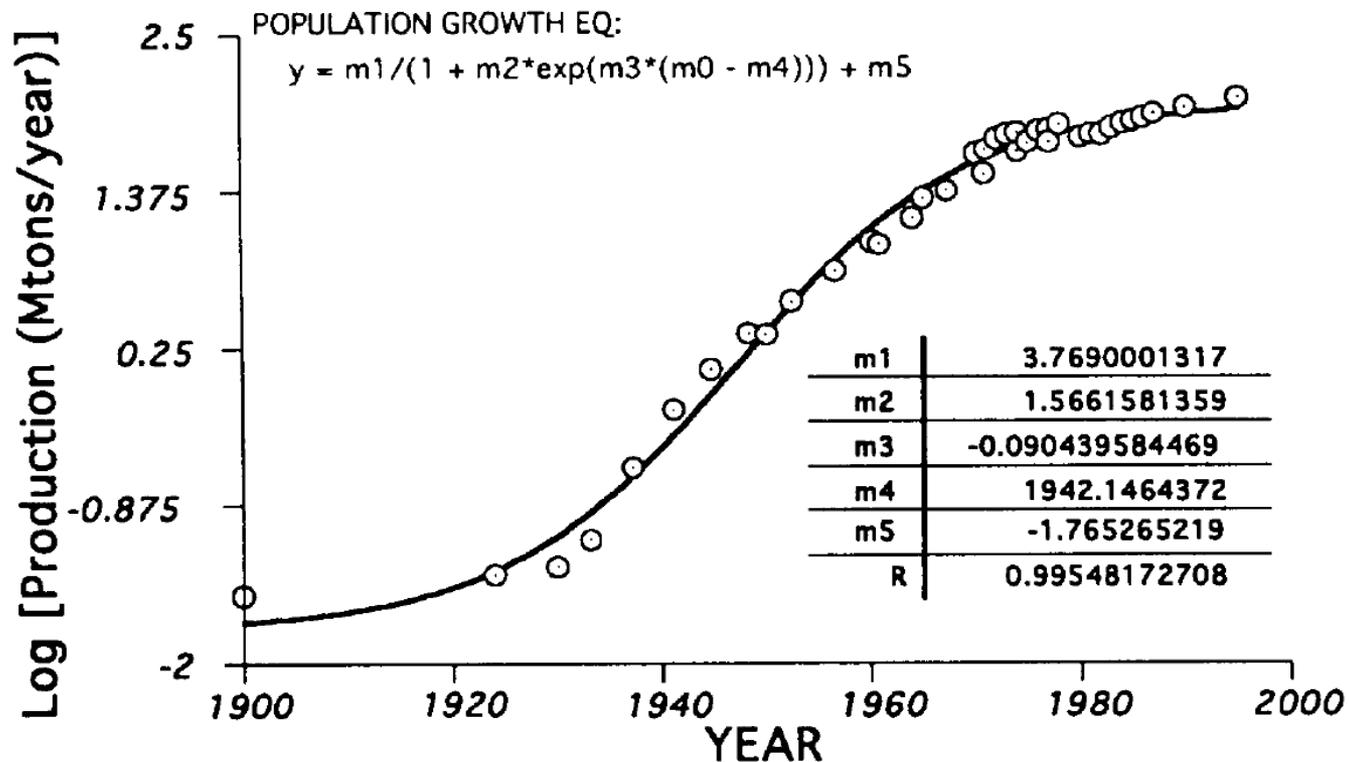

Fig. 1. World plastics production during the years 1900 to 1990 (in million metric tons per years).

Data a partir da qual os polímeros começaram a ser comercializados

L. A. Utracki

Table 2. Commercialization Dates of Selected Polymers.

Year	Code	Polymer	Producer
1868	CN or NC	Cellulose nitrate; <i>Nixon</i>	Hyatt Bros.
1900	CS	Casein; <i>Galalith</i>	Kritsche (France)
1909	PF	Phenol-formaldehyde; <i>Bakelit</i>	Bakelit Gesellschaft
1915	PS	Polystyrene; <i>Trolitul</i>	I. G. Farbenindustrie
1926	AK	Alkyd resins; <i>Glyptal</i>	General Electric Co.
1927	CA	Cellulose acetate fibers; <i>Lumarith</i>	Canadian Celanese / Eastman
1927	PMA	Polymethylacrylate	O. Röhm
1928	PVAc	Polyvinylacetate; <i>Elvacet</i>	Shawinigan Chem. Ltd.
1929	GRS/SBR	Styrene-butadiene rubber; <i>Styrolux</i>	I. G. Farbenindustrie
1929	PA-6	Poly- ϵ -caprolactam (Polyamide-6); <i>Perlon</i>	I. G. Farbenindustrie
1930	CR	Chloroprene rubber	E. I. du Pont de Nemours & Co.
1931	PVC	Polyvinylchloride; <i>Trovidur, Vestolit</i>	I. G. Farbenindustrie
1931	PMMA	Polymethylmethacrylate; <i>Plexiglass</i>	Röhm and Haas
1934	PCTFE	Polychlorotrifluoroethylene; <i>Hostaflon</i>	Hoechst
1934	PVF	Polyvinylformal	Shawinigan Chem. Ltd.
1936	PAN	Polyacrylonitrile; <i>Orlon</i>	USSR
1937	PA-66	Polyamide-66; <i>Nylon</i>	E. I. du Pont de Nemours & Co.
1937	SAN	Styrene-acrylonitrile copolymer; <i>Luran</i>	I. G. Farbenindustrie
1939	LDPE	Low density polyethylene; <i>Alketh</i>	ICI Ltd.
1939	PVDC	Polyvinylidenechloride; <i>Saran</i>	Dow Chem. Co.
1942	PTFE	Polytetrafluoroethylene; <i>Teflon TFE</i>	E. I. du Pont de Nemours & Co.
1943	HDPE	High density polyethylene; <i>Vestolen</i>	BASF
1943	PDMS	Polydimethylsiloxane; <i>Dow-Corning</i>	Dow Chem. Co.
1943	PVAI	Polyvinyl alcohol; <i>Vinaviol</i>	Shawinigan Chem. Ltd.
1943	PVCAc	Vinylchloride-vinyl acetate copolymers; <i>Vinidur</i>	Shawinigan Chem. Ltd.
1943	TR	Polysulfide rubbers; <i>Thiokol</i>	Thiokol Chem. Corp.
1946	EP	Epoxy; <i>Araldite</i>	Ciba-Geigy
1946	ABS-A	ABS-mechanical blend	U.S. Rubber
1946	PET	Polyethyleneterephthalate; <i>Terylene</i>	ICI
1947	PU	Polyurethanes; <i>Perlon U</i>	Bayer
1950	EVAc	Ethylene-vinylacetate copolymer	ICI

1957	PP	Isotactic polypropylene; <i>Pro-Fax</i>	Montecatini/Hercules/Hoechst
1958	PC	Polycarbonate of bisphenol-A; <i>Makrolon</i>	Bayer AG
1959	CPE	Chlorinated polyethylene; <i>Hostapren</i>	Hoechst
1959	POM	Polyoxymethylene (Acetal); <i>Delrin</i>	E. I. du Pont de Nemours & Co.
1960	EPR	Ethylene-propylene elastomer; <i>Vistalon</i>	Exxon
1960	LLDPE	Linear low density polyethylene; <i>Sclair</i>	DuPont-Canada
1961	Aramid	Poly(m-phenyleneisophthalamide); <i>Nomex</i>	E. I. du Pont de Nemours & Co.
1961	TPU	Thermoplastic polyurethane; <i>Estane</i>	B. F. Goodrich
1962	PVDF	Polyvinylidene fluoride; <i>Kynar</i>	Pennwalt Chem. Co.
1962	Phenoxy	Polyhydroxyether of bisphenol-A; <i>Phenoxy</i>	Union Carbide
1962	PI	Polyimides; <i>Kapton</i>	E. I. du Pont de Nemours & Co.
1963	EPDM	Ethylene-propylene-diene; <i>Nordel</i>	E. I. du Pont de Nemours & Co.
1963	SMA	Styrene-maleic anhydride; <i>Cadon, Dylark</i>	Sinclair Petrochemicals Co.
1964	Ionomers	Ethylene copolymer ionomers; <i>Surlyn</i>	E. I. du Pont de Nemours & Co.
1964	PPE	Polyphenylene ether; <i>PPO</i>	General Electric Co.
1965	PAI	Polyamide-imide; <i>Torlon</i>	Amoco Chem. Corp.
1965	PSF	Polysulfone of bisphenol-A; <i>Udel</i>	Union Carbide Corp./Amoco
1965	SBS	Poly(styrene-b-butadiene); <i>Kraton D</i>	Shell Chem. Co.
1966	PPE blend	Polyphenylene ether; <i>Noryl</i>	General Electric Co.
1969	PMP	Poly-4-methyl pentene-1; <i>XT</i>	ICI/Mitsui Petrochem.
1969	PBT	Polybutyleneterephthalate; <i>Celanex</i>	Celanese
1972	Aramid	Poly(p-phenyleneisophthalamide); <i>Kevlar</i>	E. I. du Pont de Nemours & Co.
1972	LCP	Liquid crystal polymers; <i>Ekkcel I-2000</i>	Carborundum
1972	PES	Polyethersulfone; <i>Victrax</i>	ICI Ltd.
1972	SEBS	Hydrogenated SBS; <i>Kraton G</i>	Shell Chem. Co.
1973	PPS	Polyphenylene sulfide; <i>Rayton R</i>	Phillips Petroleum Co.
1974	PAr	Polyarylates; <i>U-polymer</i>	Unitika
1978	PEEK	Polyetheretherketone; <i>Victrax</i>	ICI Ltd.
1980	APEC	Aromatic polyestercarbonate; <i>Apec</i>	Chem. Werke Albert; Bayer
1981	PEBA	Polyether-block-amide; <i>Pebax</i>	Atochem
1982	PEI	Polyetherimide; <i>Ultem</i>	General Electric Co.
1983	PAS	Polyarylsulfone; <i>Radel</i>	Amoco
1985	PAE	Polyarylether; <i>Parylen</i>	Union Carbide
1986	PISF	Polyimidesulfone	Celanese
1987	PTES	Polythioethersulfone; <i>Amoroon</i>	Dainippon Ink & Chemicals
1987	PA-46	Polyamide-4,6; <i>Stanyl</i>	DMS
1989	sPS	Syndiotactic polystyrene	Idemitsu/Dow
1991	PPA	Polyphthalamide; <i>Amodel</i>	Amoco
1992	sPP	Syndiotactic polypropylene	Sumitomo Chemical

O desenvolvimento dos métodos de moldagem dos polímeros: Processamento e transformação dos polímeros

Table 4. Development of Polymer Molding Methods.

Technology	Year	Event
Compression molding	1849	Compression molding of rubbers (Hancock)
	1862	Baldwins patent compression molding
	1916	Terkison Machine Corp. molds for L. Baekeland
Transfer molding	1926	Transfer molding of phenolics (L. E. Shaw)
Injection molding	1870–72	Injection molding of NC (Hyatt brothers)
	1878	Multi-mold invented by Hyatt
	1921	Modern IM-machine for thermoplastics (Eichengrun)
	1926	Horizontal IM patented by Eckert & Ziegler
	1932	Automatic injection molding (Gastrow)
	1946	Screw injection molding (Henry)
Blow molding	1881	Blow molding of NC (W. B. Carpenter)
	1930	Blow molding of CA rattles (Hyatt), and bottles (Plax)
	1935	Hot-melt machine (Førngren & Kopitke)
	1940	Blow molding of polyethylene bottles
Roto molding	1820	"Splash" molding of chocolate menagerie in Holland ...
	1850	... Adapted to cellulosics (Dodge)
	1940	Tri-axial rotomolding of plastisols (Union Carbide Corp.)

Table 3. Development of Polymer Mixing and Extrusion.

Technology	Year	Event
Mixing	1823	Spiked internal mixer for rubbers & blends (Hancock)
	1936	Two-roll mill (Chaffe)
	1876	Counter-rotating twin-shaft mixer (Freyburger)
	1916	Banbury mixer
Extrusion	1800	Piston extrusion of macaroni in Italy ...
	1845	...Adapted by Bewley to rubbers
	1879	Screw extrusion of rubber (Gray)
	1892	Steam-heated screw extrusion (Troester)
	1932	Pin-barrel extruders (Anderson)
	1939	First modern extruder (Leistritz); L/D = 10
	1939	Co-rotating twin-screw extruder (Colombo)

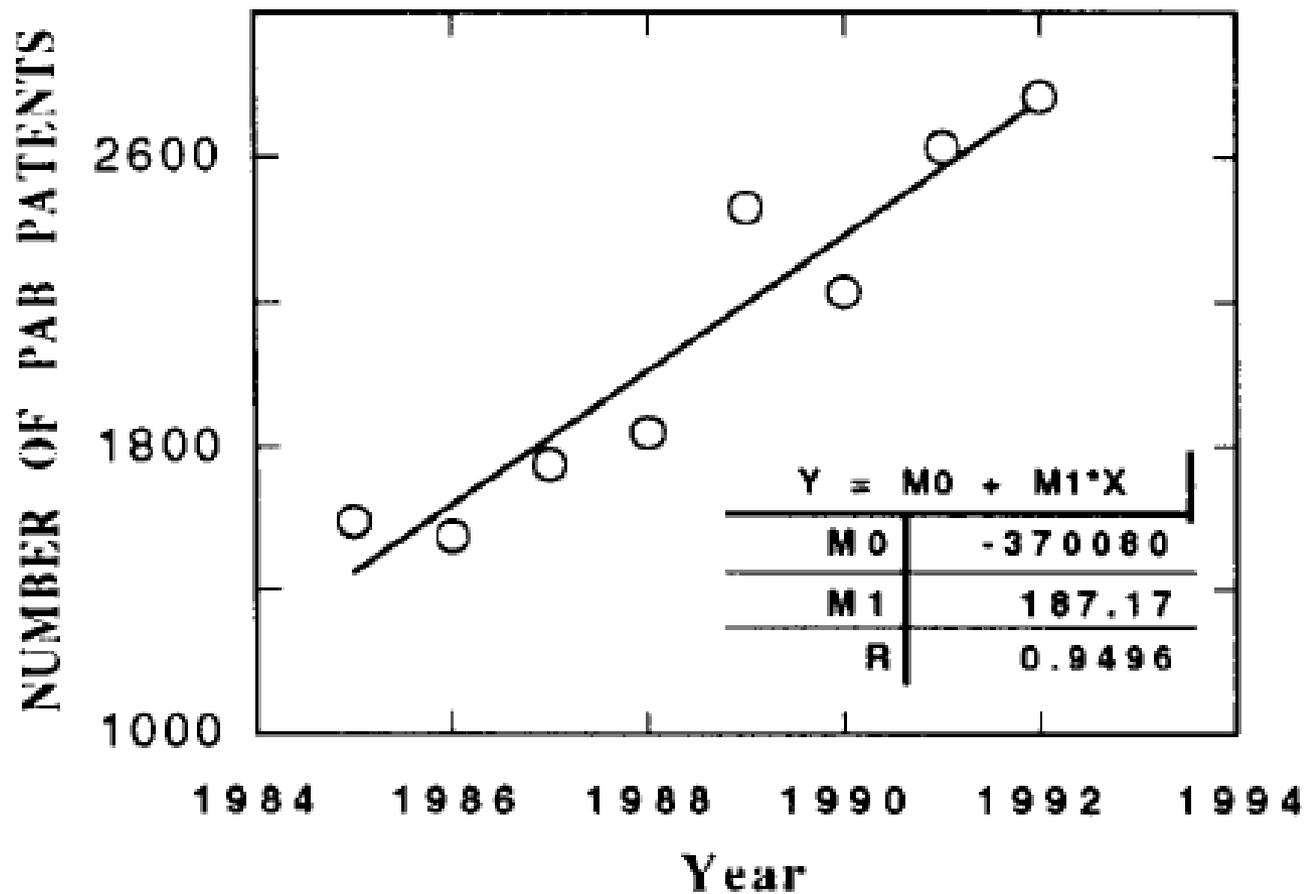

Fig. 2. The annual output of polymer blend patents published during the years 1985 to 1992.

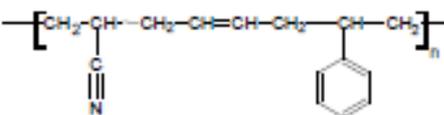

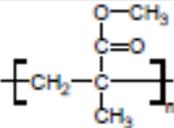

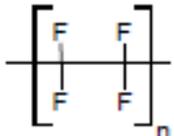

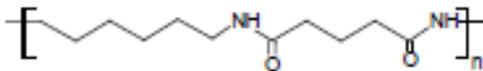

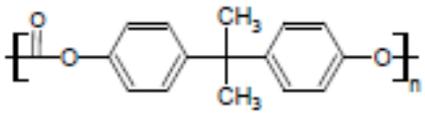

Table 5. Examples of Commercial Alloys and Blends.

No.	Polymer		Name	Supplier	Comments
	A	B			
1.	PP	EPR or EPDM	Milastormer Santoprene Sarlink Sumitomo TPE Dynaflex	Mitsui Petrochem. Monsanto Novacor Sumitomo Chem. JSR	Dynamically vulcanized, tough, composition-dependent (≤ 30 wt% EPR) low-temperature modulus and impact-strength.
2.	PVC	PMMA	Acrylavin Haibulen Kane-ace Kydene Metabulen Polycast Sunloid KD	Gen. Tire & Rub. Nippon Zeon Kanegafuchi Chem Rohm & Haas Mitsubishi Rayon Royalite Tsusunaka	Thermoformable, flexible sheets with high impact strength, excellent outdoor performance, good flame, chemicals, and solvent resistance.
3.	PVC	NBR	Geon/Hycar Denka LCS JSR NV Krynac Nipol Paracril OZO Vynite	BF Goodrich Showa Denka Jap. Synt. Rub. Polysar Nippon Zeon Uniroyal Alpha Chem.	Good processability, fast calendaring and extrusion, impact and tear strength, oil, fuel, chemical, abrasion, weathering, and ozone resistance, antistatic, flame and moisture resistance.
4.	PVC	ABS, ASA, ABS, or SMA	Cycovin Geloy Kaneka Enplex	GE Plastics GE Plastics Kanegafuchi (and all other ABS manufacturers in Japan)	Good processability and impact strength, flame retardancy, cost/performance ratio (blends with ASA show superior weatherability; with SMA—high HDT).
5.	PA	PP	Akuloy RM Dexpro, Dexlon Flexloy Novamid AC Orgalloy Poliblend NH Systemer	DSM Dexter Corp. Sumitomo Chem. Mitsubishi Chem. Atochem Poliresins SA Showa Denko K. K.	Good processability, low water absorption, dimensional stability, low density (i.e., low cost per volume), low liquid and vapor permeability, moderate impact strength, good resistance to alcohols and glycols.

			Use Alloy Or	Use Inc.	
6.	PA	ABS	Alphaloy MPA Elemid Malecca S Maxloy A Novaloy A Techni-ace TA Triax 1000 Ultramid	Kanegafuchi Chem. GE Plastics Denka JSR Daicel Sumitomo Dow Monsanto BASF	Compatibilized blends (with either PA as matrix or co-continuity of phases) show high heat and chemical resistance, good flow, low temperature impact strength, moisture sensitivity, and cost.
7.	PA	PC	Dexcarb lupilon Sc 720	D & S Int. Mitsubishi Gas Idemitsu Petrochem.	Processability, HDT > 200°C, impact strength, low mold shrinkage, solvent, and moisture sensitivity.
8.	PA	Cyclic- PO	Elmit ZF	Mitsui Petrochem.	Processability, impact strength, moisture insensitivity.
9.	PC	ABS (and SAN in some blends)	Alphaloy Bayblend T Cycoloy Denka HS Dialoy C Exeloy lupilon Lynex B Malecca P Proloy/Lexan Pulse Techniace TC Triax 2000	Kanegafuchi Chem. Bayer/Miles GE Plastics Denki Kagaku Mitsubishi Rayon JSR Mitsubishi Gas Asahi Chem. Denka GE Plastics Dow Sumitomo Dow Monsanto	Three-phase blends, with 30–65 wt% PC, showing good processability, toughness, high temperature and delamination resistance, low-temperature impact strength.

Características e Aplicações para Diversos Materiais Poliméricos

Características e Aplicações para Diversos Materiais Poliméricos

Polímero	Estrutura	Nome Comercial	Principais Características	Aplicações
Polímeros Termoplásticos				
Acrilonitrila-butadieno-estireno (ABS)			Excepcionais resistências mecânicas e tenacidade, resistência a distorção térmica; boas propriedades elétricas; inflamável e solúvel em alguns solventes orgânicos	
Acrílicos [poli(metil metacrilato)]			Excepcional transmissão da luz e resistência às intempéries; propriedades mecânicas apenas regulares	
Fluorcarbonos (PTFE ou TFE)			Quimicamente inertes em quase todos os ambientes, excelentes propriedades elétricas; baixo coeficiente de atrito; podem ser usados até 260 °C; relativamente pouco resistentes e propriedades de escoamento a frio ruins	
Poliamidas (náilons)			Boa resistência mecânica, resistência à abrasão e tenacidade; baixo coeficiente de atrito; absorvem água e alguns outros líquidos	
Polycarbonatos			Dimensionalmente estáveis; baixa absorção de água; transparentes; muito boas resistências ao impacto e ductilidade; a resistência química não é excepcional	

Poliétileno	$\left[\text{CH}_2 - \text{CH}_2 \right]_n$		Quimicamente resistente e isolante elétrico; tenaz e com coeficiente de atrito relativamente baixo; baixa resistência e resistência ruim às intempéries	
Polipropileno	$\left[\begin{array}{c} \text{CH}_3 \\ \\ \text{CH} - \text{CH}_2 \end{array} \right]_n$		Resistente à distorção térmica; excelentes propriedades elétricas e resistência à fadiga; quimicamente inerte; relativamente barato; resistência ruim à luz UV	
Poliestireno	$\left[\begin{array}{c} \text{CH}_2 - \text{CH} \\ \\ \text{C}_6\text{H}_5 \end{array} \right]_n$		Excelentes propriedades elétricas e clareza óptica; boa estabilidade térmica e dimensional; relativamente barato	
PVC (Vinil)	$\left[\begin{array}{c} \text{CH}_2 - \text{CH} \\ \\ \text{Cl} \end{array} \right]_n$		Bons materiais de baixo custo para uso geral; normalmente rígidos, mais podem ser tornados flexíveis com plastificantes; frequentemente copolimerizados; suscetíveis à distorção térmica	
Poliéster (PET ou PETE)	$\left[\text{H} - \text{O} - \text{C}(=\text{O}) - \text{C}_6\text{H}_4 - \text{C}(=\text{O}) - \text{O} - \text{CH}_2 - \text{CH}_2 - \text{O} \right]_n$		Um dos filmes plásticos mais tenazes; excelentes resistências à fadiga e ao rasgamento, e resistência à umidade, ácidos, graxas, óleos e solventes	
Polímeros Termofixos				
Epóxis	$\left[\begin{array}{c} \text{O} \\ \diagup \quad \diagdown \\ \text{C} \\ \\ \text{CH}_2 \end{array} \right] - \left[\text{O} - \text{C}_6\text{H}_4 - \text{C}(\text{CH}_3)_2 - \text{C}_6\text{H}_4 - \text{O} - \text{CH}_2 - \text{CH}_2 - \text{OH} \right]_n$		Excelente combinação de propriedades mecânicas e de resistência a corrosão; dimensionalmente estáveis; boa adesão; relativamente baratos; boas propriedades elétricas	

Fenólicos			Excelente estabilidade térmica ate acima de 150 °C; podem ser combinados com um grande numero de resinas, cargas etc; baratos	
Poliésteres			Excelentes propriedades elétricas e baixo custo; podem ser formulados para uso à temperatura ambiente ou em temperaturas elevadas; geralmente são reforçados com fibras	

A constituição dos Polímeros e sua diversidade

A maioria das macromoléculas naturais e polímeros sintéticos é formada pelos elementos C, H, O, N.

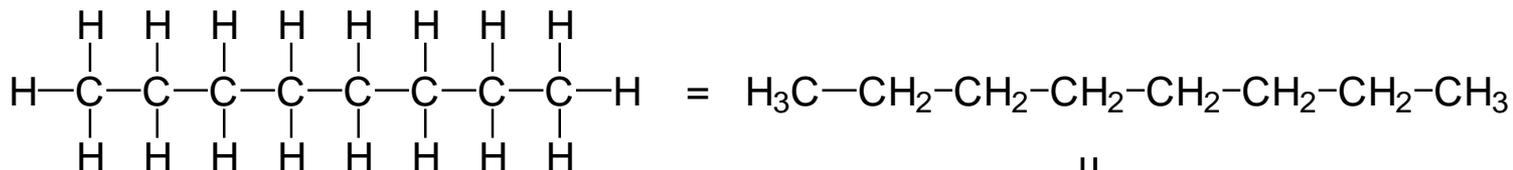

Também são encontrados em menor proporção o S, P e Si.

A constituição dos Polímeros e sua diversidade - Isomeria

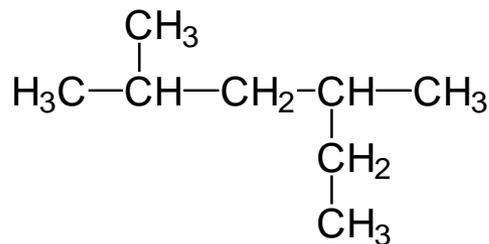

- Dois compostos com a mesma fórmula química podem apresentar estruturas muito distintas

Ex: C_8H_{18}

- n-octano

- 2-metil-4-etil pentano (isooctano)

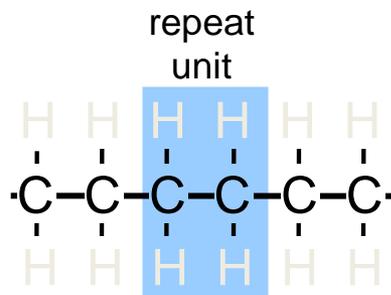

Polímeros: Definições

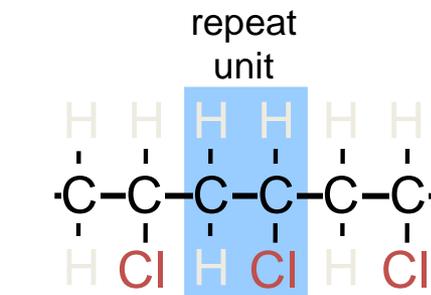

O que é um polímero?

Poli mer

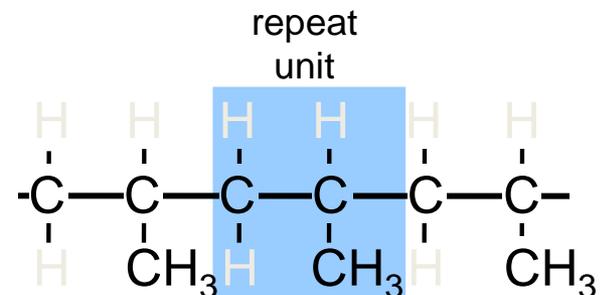

Muitos unidades repetitivas

Polietileno (PE)

Cloreto de polivinila (PVC)

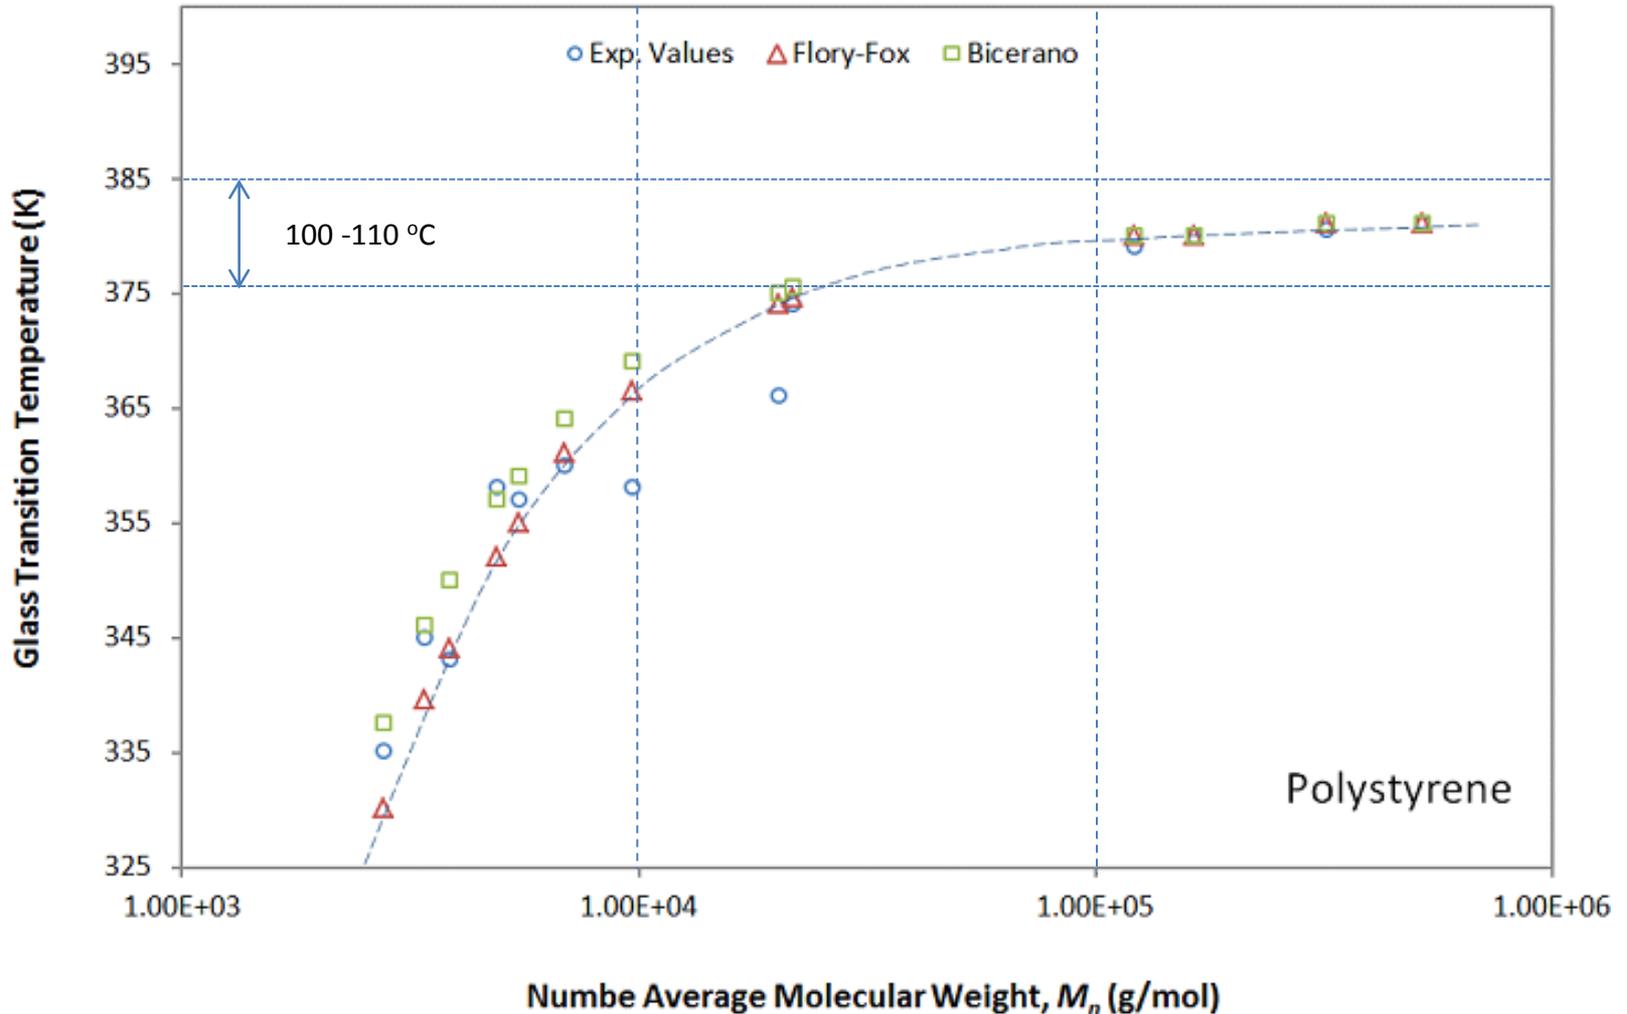

Polipropileno (PP)

A natureza macromolecular dos polímeros: Uma série homóloga – Parafinas lineares com fórmula química C_nH_{2n+2}

Table 14.1 Compositions and Molecular Structures for Some of the Paraffin Compounds: C_nH_{2n+2}

<i>Name</i>	<i>Composition</i>	<i>Structure</i>	<i>Boiling Point (°C)</i>
Methane	CH_4	$\begin{array}{c} H \\ \\ H-C-H \\ \\ H \end{array}$	-164
Ethane	C_2H_6	$\begin{array}{c} H \quad H \\ \quad \\ H-C-C-H \\ \quad \\ H \quad H \end{array}$	-88.6
Propane	C_3H_8	$\begin{array}{c} H \quad H \quad H \\ \quad \quad \\ H-C-C-C-H \\ \quad \quad \\ H \quad H \quad H \end{array}$	-42.1
Butane	C_4H_{10}		-0.5
Pentane	C_5H_{12}		36.1
Hexane	C_6H_{14}		69.0

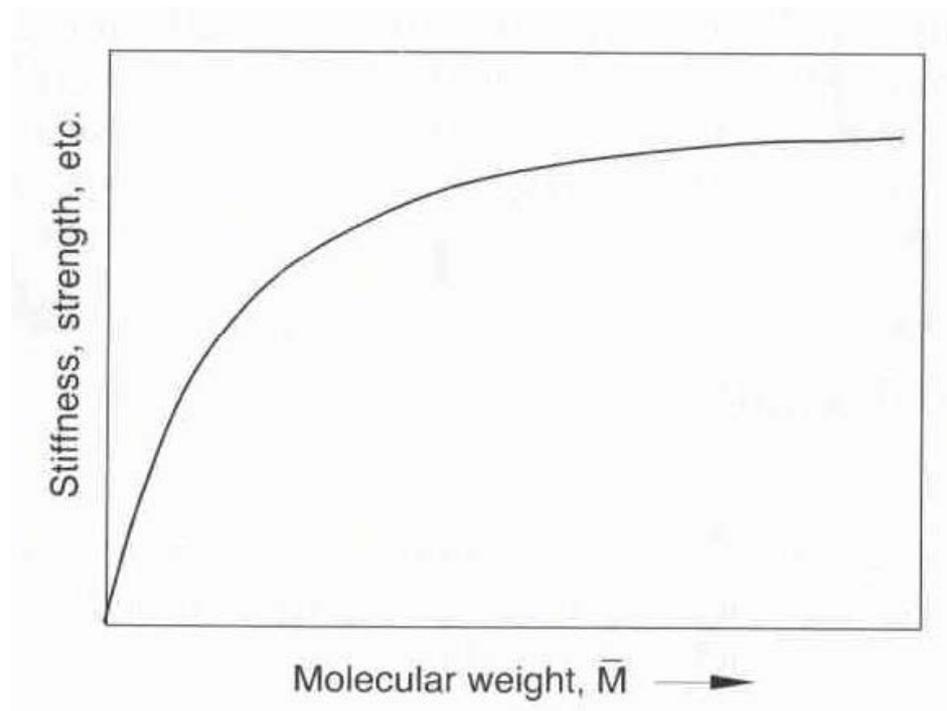

Influência da massa molar nas propriedades dos polímeros

Fonte: *Polymer Properties Database*

Influência da massa molar nas propriedades dos polímeros

A rigidez aumenta com a massa molar, chegando a um valor assintótico após um certo valor de massa molar.

Até a Próxima Semana!
